Wartime Schooling and Education Policy in the Second World War Sarah Van

Ruyskensvelde, 2016-08-18 This book deals with the development of private secondary schooling during the Second World War in Belgium. It focuses on how the German occupier used education to gain acceptance of the regime, and discusses the attitudes of Belgian education authorities, schools, teachers and pupils towards the German occupation. Suggesting that the occupation forced Belgian education authorities, such as the Roman Catholic Church, to take certain positions, the book explores the wartime experiences and memories of pupils and teachers. It explains that the German Culture Department was relatively weak in establishing total control over education and that Catholic schools were able to maintain their education project during the war. However, the book also reveals that, in some cases, the German occupation did not need total control over education in order to find support for some authoritarian ideas. As such, Van Ruyskensvelde's analysis presents a nuanced view of the image of the Catholic Church, schools, teachers and pupils as mere victims of war.

Murder in Our Midst Omer Bartov, 1996-02-29 War endlessly tries to mask itself. The myth of the heroic soldier testing his individual courage stands in stark contrast to the reality of mass, anonymous death and the suppression of individual actions. *Murder in Our Midst* shows that this fundamental tension reached its natural conclusion in the Holocaust, and that disguising it has required an ongoing effort to misrepresent war and the Holocaust as something other than industrial killing. Examining a broad range of the representations of war's horrors, from scholarly depictions to those in popular literature, poetry, art, and the movies, Omer Bartov finds they have some things in common. Societies and cultures have attempted to form coherent images of horrific events, to draw didactic lessons from them, and to exploit them to legitimate ideological or political positions. Made up of interconnected essays, this book is both a scholarly and an often personal and passionate examination of the emergence, implementation, and representation of industrial killing. Bartov draws out the links between recent revisionist attempts to minimize and deny the Holocaust, and Hollywood's ongoing fascination with National Socialism and Hitler's Final Solution. Arguing that the modern predicament reflects the effects of the Nazi genocide on current perceptions of war, history, and memory, this book is a plea for compassion and commitment in an increasingly violent and indifferent world.

Racist Violence and the State Rob Witte, 2014-09-11 *Racist Violence and the State* is the first serious study to apply a comparative research-based approach to the study of racist violence in Britain, France and The Netherlands since 1945. Setting racist violence within a historical background of the post-imperialist legacy, the author presents an accessible, fascinating and highly original analysis of the development of public and state attitudes to racist violence over the past 50 years.

Occupied Economies Hein A.M. Klemann, Sergei Kudryashov, 2013-05-09 What were the consequences of the German occupation for the economy of occupied Europe? After Germany conquered major parts of the European continent, it was faced with a choice between plundering the suppressed countries and using their economies to supply its needs. The choices made not only differed from country to country, but also changed over the course of the war. Individual leaders; the economic needs of the Reich; the military situation; struggles between governors of occupied countries and Berlin officials; and finally racism, all had an impact on the outcome. In some countries the emphasis was placed on production for German warfare, which kept these economies functioning. New research, presented for the first time in this book, shows that as a consequence the economic setback in these areas was limited, and therefore post-war recovery was relatively easy. However, in other countries, plundering was more characteristic, resulting in partisan activity, a collapse of normal society and a dramatic destruction not only of the economy but in some countries of a substantial proportion of the labour force. In these countries, post-war recovery was almost impossible.

All Positive Action Starts with Criticism Sacha la Bastide-van Gemert,2015-01-16 This study provides a historical analysis of Freudenthal's didactic ideas and his didactic career. It is partly biographical, but also contributes to the historiography of mathematics education and addresses closely related questions such as: what is mathematics and where does it start? Which role does mathematics play in society and what influence does it have on the prevailing views concerning its accompanying didactics?. Hans Freudenthal (1905–1990), professor in mathematics, scientist, literator, but above all mathematics-educator, was inextricably linked to the changes which took place in mathematics education and didactics during the second half of the last century. His diversity as a scientist and his inexhaustible efforts to establish the didactics of mathematics as a seriously pursued science, made Freudenthal's influence in this area considerable. He foresaw an essential, practical role for mathematics in everyone's life, encouraging students to discover and create mathematics themselves, instead of imposing a ready-made mathematical system. The theory of mathematics education thus developed in the Netherlands would gain world fame in the following decades. Today, in the light of the discussions about mathematics education, in which the call for 'genuine' mathematics instead of the so-called 'kindergarten'-mathematics can be heard, Freudenthal's approach seems to be passé. However, the outcome of this study (which is mainly based on documents from Freudenthal's vast personal archive) shows a more refined picture. The direct identification of 'kindergarten'-mathematics with Freudenthal's view on mathematics education is not justified. 'Realistic mathematics' as advocated by Freudenthal includes more than just a practical introductory and should, among other things, always aim at teaching 'genuine' mathematics in the end.
