### **Thallium-201 and Technetium-99m-Pyrophosphate Myocardial Imaging in the Coronary Care Unit**

F.J.T Wackers, 2012-12-06 Noninvasive visualization of myocardial infarction using radionuclides dates back over eighteen years. Edward A. Carr and William H. Beierwaltes were first to report (1962) successful external imaging of myocardial infarcts in dogs and in man using an Anger scintillation camera. They demonstrated that after intravenous administration of  $^{86}\text{Rb}$  or  $^{131}\text{I}$ CS an infarct was visualized as a cold spot, while  $^{203}\text{Hg}$ -labeled-chlormeridin resulted in a hot-spot image of the infarct. Since then, there have been major developmental improvements in available radionuclides, scintillation cameras and computer processing capabilities. In particular, the development of mobile gamma cameras opened the possibility to obtain high quality images even at the bedside of critically ill patients. Since the development in 1974 of a new radiopharmaceutical,  $^{201}\text{Tl}$  and the application of  $^{99\text{m}}\text{Tc}$ -pyrophosphate for myocardial imaging, these imaging agents are widely used for the detection of acute myocardial infarction. However, for practical application, frequently there appears to be

uncertainty or even confusion concerning the relative merits of each method.

**201 Billion Galaxies** Nicholas Campbell Corff, 2012-10 This is a book written for the 1.1 billion human beings who are searching for something secular, agnostic or nonreligious In the woman's dream, the spirit had come to her and had given her a message that she could not ignore. The black-chicken spirit had told her to found a religion, one based upon individual and communal worship, one that included the building or your own church where only you could go. This is a book of true first-hand stories and insights that address religious beliefs – where they come from and where they might be going. It confronts the difficulties between age-old human beliefs and modern scientific discoveries, discussing the impacts and discontinuities that result. Violence, permission, sex, the afterlife are all here, but not in the usual way. Who will actually be on the Starship Enterprise? How many sentient beings are there in the universe? What is a soul, really? What does holy actually mean? These are a few of the issues that are dealt with through the stories. Of course the biggy, and indicated by the title

of the book, is exactly where do we and our religions fit in a universe of billion trillion stars, and an unimaginable number life-sustaining planets?
