Implementing Sustainability in the Curriculum of Universities Walter Leal Filho, 2017-11-17 This book presents sustainable development themes across universities and introduces methodological approaches and projects to the teaching staff. It has been prepared against this background, to identify ways to better teach about sustainability issues in a university context. It contains a set of papers presented at a Symposium with the same title, held at Manchester Metropolitan University (UK) in March 2017. The event was attended by a number of institutions of higher education active in this field. It involved researchers in the field of sustainable development in the widest sense, from business and economics, to arts and fashion, administration, environment, languages and media studies. Sustainability is seldom systematically embedded in the curriculum at higher education institutions. Yet, proper provisions for curricular integration of sustainability issues as part of teaching programmes across universities are an important element towards curriculum greening. The aims of this book are:

(i) to provide teaching staff at universities active and/or interested in teaching sustainable development

themes with an opportunity to document and disseminate their works (i.e. curriculum innovation, empirical work, activities, case studies practical projects); (ii) to promote information, ideas and experiences acquired in the execution of teaching courses, especially successful initiatives and good practice; (iii) to introduce methodological approaches and projects which aim to offer a better understanding of how matters related to sustainable development can be tackled in university teaching. Last but not least, a further aim of this book, prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), is to catalyse a debate on the need to promote sustainable development teaching today.

The Bases of Chemical Thermodynamics: Volume 1 Michael Grätzel,Pierre Infelta,2000-01-01 In this volume (volume 1), the fundamental aspects of thermodynamics are presented. The first & second

laws of thermodynamics are illustrated. The need to define thermodynamic temperature & the nature of entropy are explained. The book explores the meaning of auxiliary thermodynamic functions, the origin, usefulness & use of partial molar quantities. Gaseous systems & phase equilibrium, in systems where chemical reactions do not take place, are described. In volume 2, the tools necessary to study & understand systems in which chemical reactions can take place are developed. The variables of reaction are the keys to understanding. Criteria for chemical equilibrium are established. It is shown how chemical reactions can provide work, as for example, in batteries. For complex systems, the number of independent reactions & their nature have to be determined systematically. The effect of external factors on chemical equilibria is analyzed & illustrated. The formalism necessary to study ideal & real solutions is provided. The various standard states in use & the corresponding activity coefficients are clearly defined. The statistical aspect of thermodynamics is best understood once students are familiar with the rest of the book, for this reason, is treated in the last chapter. Both volumes comply with the latest IUPAC recommendations for symbols. Most of the specific mathematical

tools are presented either directly in the text if they are used mostly in one chapter, while the others are included in an appendix. A primarily phenomenological approach has been selected to keep chemical thermodynamics easily accessible to beginners. Intermediate steps in the derivations have been kept to enhance the clarity of the presentation. A large number of problems, most of them original, will with complete solutions, are provided. They give this textbook a great pedagogical value. This book is primarily destined to students, graduate students & practicing scientists in the fields of Chemistry, Chemical Engineering & Material Sciences.
