The Type II U-Boat Waldemar Góralski, 2013 The Type II U-boat - The latest book in Super Drawings in 3D series presents a brief description of the German Type II coastal submarines along with their general characteristics. Since an image can speak a thousand words, the text is accompanied by 160 renderings which show the external appearance of all four sub-types including details such as various conning towers and armament variants as well as other fittings. Blueprints of the four sub-types in 1:144 scale (general and isometric views) are included on a separate sheet. This publication is an invaluable help to any modeler interested in building a replica of any of the Type II submarines.

The Type XXI U-Boot Dmitry Mironov, Daniel Pastwa, 2018-06-19 The Type XXI U-boat was one of the few types of weapon that, despite being unable to take part in combat, completely changed the character of naval actions at sea. It was the first true submarine in history. The other types of vessels designed so far were basically diving ships that might have been underwater for some time, but most of the time they had to be on the surface because their underwater range was severely limited. Under water they were slow and not maneuverable, and often had to emerge onto the surface to charge their electric batteries. The Type XXI was designed from the outset as a true submarine whose natural environment was to be the deep seas.
