Smart Master Planning for Cities T. M. Vinod Kumar,2022-07-20 This book, based on international collaborative research, presents a state-of-the-art design for “Smart Master Planning” for all metropolises, megacities and metacities as well as at subcity zonal and community and neighborhood level. Smart Master Planning accepts that all cities are a smart city in making in a limited way as far as the six components for smart cities, namely smart people, smart economy, smart environment, smart mobility and smart governance are concerned. Smart Master Planning in any city can only be designed and executed by active roles of smart people and smart city government and is a joint and synchronous effort of e-democracy, e-governance and ICT-IOT system in a 24 hour 7-day framework on all activities. In addition to use of information and communication technologies and remote sensing, the design of Smart Master Planning utilizes domain-specific tools of many aspects of a city to realize the coordinated, effective and efficient planning, management, development and conservation that improve ecological, social, biophysical, psychological and economic wellbeing in an equitable manner without compromising the sustainability of development ecosystems and stakeholders. This book will present 12 case studies covering more than 12 cities or more cities centered on domain-specific smart planning components. Case studies of digital innovations in the Smart Master Planning include Application of Artificial Neural Network in Master Planning for cities, Smart Master Plan and 3 D GIS Planning Support System and Digital Spatial Master Planning Incorporating Machine to Machine Automation for Smart Economic Community (IoT, ICT and M2M based Digital Integration).

Interactive Multimedia Dragan Cvetković,2019-09-25 Multimedia is the common name for media that combine more than one type of individual medium to create a single unit. Interactive media are the means of communication in which the outputs depend on the inputs made by the user. This book contains 11 chapters that are divided into two sections: Interactive Multimedia and Education and Interactive Multimedia and Medicine. The authors of the chapters deal with different topics within these disciplines, such as the importance of cloud storage, development of play tools for children, use of gaming on multimedia devices designed for the elderly, development of a reading, writing, and spelling program based on Luria's theories, as well as development of mobile applications called BloodHero dedicated to the increase in blood donors, etc.

Virtual Systems and Multimedia Theodor G. Wyeld,Sarah Kenderdine,Michael Docherty,2008-03-08 The 13th International Conference on Virtual Systems and Multimedia was held in Brisbane, Australia in September 2007. This was the first time that VSMM was sited in Australia. The Australian conference theme reflected the country's cultural heritage, both recent and past - Exchange and Experience in Space and Place. Of the many papers submitted under this theme we were able to identify three core sub-themes: Virtual Heritage, Applied Technologies and Virtual Environments. With a truly international flavor, these sub-themes covered the diverse areas of heritage site and artifact reconstruction and analysis, Australian Aboriginal cultural heritage, training, notions of spirituality, human - computer interaction in virtual environments, 3D modelling, remote collaboration and virtual agents. This made for rich, varied and lively conference session debates. Ninety-seven papers were submitted. Of these, 56 were accepted for inclusion in the general conference proceedings. Of these, 18 were further reviewed and selected for this Springer publication. The authors of these papers were invited to revise their papers following feedback from the conference before inclusion in this volume. Many people contributed to the conference. We first wish to thank the Virtual Systems and Multimedia Society, who provided strong support to the whole process of the preparation of the conference. In particular, we would like to express our thanks to Takeo Ojika, Mario Santana Quintero and Hal Thwaites for their generous support and guidance.

Gas Dynamics with Applications in Industry and Life Sciences Mohammad Asadzadeh,Larisa Beilina,Shigeru Takata,2023-12-01 This proceedings volume gathers selected contributions presented at two instances of the JSPS/SAC Seminar: On Gas Kinetic/Dynamics and Life Science, held by the Chalmers University of Technology and University of Gothenburg, Sweden, on March 25-26, 2021 (virtual) and March 17-18, 2022 (virtual). Works in this book provide a concise approach to the theoretical and numerical analysis of kinetic type equations that arise, for example, in modeling industrial, medical, and environmental problems. Readers will find some of the most recent theoretical results, newly developed numerical methods in the field, and some open problems. Possible application areas encompass fission/fusion energy, electromagnetics, nuclear science and engineering, medical service, radiation oncology, and plants growth conditions, to name a few. The JSPS/SAC seminars are jointly organized by JSPS (Japan Society for the Promotion of Science)—Stockholm Office and the Department of Mathematical Sciences, Chalmers University of Technology & University of Gothenburg, Sweden. These seminars foster discussions on the mathematical theory, industrial and life science applications, and numerical analysis of non-linear hyperbolic partial differential equations modeling collision-less plasma and charged particles. Designing User Interfaces With a Data Science Approach Banubakode, Abhijit Narayanrao,Bhutkar, Ganesh Dattatray,Kurniawan, Yohannes,Gosavi, Chhaya Santosh,2022-03-18 Data science has been playing a vital role in almost all major fields. Many researchers are interested in the development of IT applications, which are user-driven with a focus on issues. This can be addressed using data science. User-driven research and data science have gained much attention from many private, public, and government organizations and research institutions. Designing User Interfaces With a Data Science Approach promotes the inclusion of more diversified users for user-centered designs of applications across domains and analyzes user data with a data science approach for effective and user-friendly user interface designs. It introduces the foundations of advanced topics of human-computer interaction, particularly with user-centered designs and techniques. Covering topics such as artificial neural networks, natural dialog systems, and machine learning, this book is an essential resource for faculty, research scholars, industry professionals, students of higher education, mathematicians, data scientists, interaction designers, visual designers, software engineers, user experience researchers, accessibility engineers, cognitive system engineers, academicians, and libraries.

Design and Construction of Smart Cities Ibrahim El Dimeery,Moustafa Baraka,Syed M. Ahmed,Amin Akhnoukh,Mona B. Anwar,Mahmoud El Khafif,Nagy Hanna,Amr T. Abdel Hamid,2021-01-23 This book focuses on how to maintain environmental sustainability as one of its main principles, and it addresses how smart cities serve to diminish wastes and maintain natural resources by having clean green energy that is operated by new smart technology designs. Living in a smart city is not something of the future anymore, it is here, and it is being implemented all over the world. A smart city uses different types of electronic Internet of things (IoT) sensors to collect data and then use these data to manage assets and resources efficiently. The smart city concept integrates information and communication technology (ICT), and various physical devices connected to the IoT network to optimize the efficiency of city operations and services and achieve sustainable solutions to allow us to grow with proper management of our resources. Smart sustainable structures and infrastructures face the need of urban areas due to the growth of populations while in the same time save our environment. To achieve this, we need to revisit the conventional methods in design and construction and the conventional materials which are used now to optimize the design and provide smart solutions. In the past few years, the consumption of resources has been massive, and the

waste produced from that consumption has been inconceivable. This is causing environmental degradation, which produces many environmental challenges, such as global climate change, excessive fossil fuel dependency and the growing demand for energy. As well as, discussing the challenges facing the civil engineering design and construction of smart cities components and presenting concepts and insight from experts and researchers from different civil engineering disciplines., this book explains how to construct buildings and special structures and how to manage and monitor energy.
