Butterfly Ashley Antoinette, 2020-01-07 Butterfly is the first novel in an all new series by New York Times bestselling author Ashley Antoinette and an instant USA Today bestseller! "Run away from the boy that gives you butterflies, he's going to break your heart." Morgan Atkins had been told that phrase ever since she was a little girl and still she allowed herself to fall for the boy that made her heart flutter. After losing her first love, Morgan is terrified to love again. She's settled for a comfortable life with a respectable man. She has everything. She's living in the lap of luxury and although she's comfortable, she's bored out of her mind. When a ghost from her past blows into town, she finds herself entangled in an illicit affair. It's wrong, but she can't fight the butterflies he gives her and honestly, she doesn't want to. She can't hide the natural attraction she feels and soon, she's so deep

involved that she can no longer tell where the boundary between right and wrong lies. Her heart is telling her one thing, but her head is saying another. Morgan Atkins has always been a spoiled girl and she tries to have it all, but when she's forced to choose between a good man and a bad boy, someone will end up hurt. Someone just may end up dead. Morgan Atkins has been through more tragedy than one girl can bear. Will she weather this storm? Or will the ultimate heartbreak ruin her for good?

2D and 3D Image Analysis by Moments Jan Flusser, Tomas Suk, Barbara Zitova, 2016-11-16 Presents recent significant and rapid development in the field of 2D and 3D image analysis. *2D and 3D Image Analysis by Moments*, is a unique compendium of moment-based image analysis which includes traditional methods and also reflects the latest development of the field. The book presents a survey of 2D and 3D moment invariants with respect to similarity and affine spatial transformations and to image blurring and smoothing by various filters. The book comprehensively describes the mathematical background and theorems about the invariants but a large part is also devoted to practical usage of moments. Applications from various fields of computer vision, remote sensing, medical imaging, image retrieval, watermarking, and forensic analysis are demonstrated. Attention is also paid to efficient algorithms of moment computation. Key features: Presents a systematic overview of moment-based features used in 2D and 3D image analysis.

Demonstrates invariant properties of moments with respect to various spatial and intensity transformations. Reviews and compares several orthogonal polynomials and respective moments. Describes efficient numerical algorithms for moment computation. It is a classroom ready textbook with a self-contained introduction to classifier design. The accompanying website contains around 300 lecture slides, Matlab codes, complete lists of the invariants, test images, and other supplementary material. 2D and 3D Image Analysis by Moments, is ideal for mathematicians, computer scientists, engineers, software developers, and Ph.D students involved in image analysis and recognition. Due to the addition of two introductory chapters on classifier design, the book may also serve as a self-contained textbook for graduate university courses on object recognition.

Bionic Functional Structures by Femtosecond Laser Micro/nanofabrication Technologies

Guoqiang Li, 2018-05-15 This thesis combines advanced femtosecond laser micro/nanofabrication technologies and frontier bionic design principles to prepare diverse biomimetic micro/nanostructures to realize their functions. By studying the formation mechanism of the micro/nanostructures, the author identifies various artificial structural colors, three-dimensional micro/nanocage arrays, and fish-scale inspired microcone arrays in different processing environments. Multiple functions such as enhanced antireflection, hydrophobicity, and underwater superoleophobicity are achieved by precisely adjusting laser-machining parameters. This novel design and method have extensive potential applications in the context of new coloring technologies, microfluidics, microsensors, and biomedicine.

Creating a 3D Animated CGI Short Michael Scaramozzino, 2010-02-17 Creating a 3D

Animated CGI Short presents an insightful behind-the-scenes tour of the entire production process for 3D artists, animators, and independent filmmakers who are interested in creating their own CGI shorts as well as for those who are simply fans and enthusiasts of CGI films in general. This book presents detailed examples of every step of the production process; from initial concept through character design, set design, modeling, texturing, lighting, camera animation, character animation, lip sync, rendering, post-production, compositing, and all the way to film festival submissions and online web distribution. It truly has something for everyone interested in CGI films. Using readily available off-the-shelf hardware and software such as modo, LightWave 3D, FPrime, HD Instance, Peak, Shake, iMovie, iDVD, GarageBand and more, Creating a 3D Animated CGI Short shows how to produce a complete 3D animated CGI Short, including how to fund the production by taking on paid freelance projects along the way. Where other filmmaking books typically describe industry standard methodologies that are most effective for larger productions, this book shows how to drastically simplify and condense those processes and focus only on the essential elements that will enable a single artist or filmmaker to complete a CGI short on their own.
