Ko, Chi Chung, Cheng, Chang Dong

Real VR – Immersive Digital Reality Marcus Magnor, Alexander Sorkine-Hornung, 2020-03-10 With the advent of consumer-market Virtual Reality (VR) technology, the next revolution in visual entertainment is already on the horizon: real VR will enable us to experience live-action movies, sports broadcasts, concert videos, etc. in true visual (and aural) immersion. This book provides a comprehensive overview of the algorithms and methods that make it possible to immerse into real-world recordings. It brings together the expertise of internationally renowned experts from academia and industry who present the state of the art in this fascinating, interdisciplinary new research field. Written by and for scientists, engineers, and practitioners, this book is the definitive reference for anyone interested in finding out about how to import the real world into head-mounted displays.

A Revolution in Color: The World of John Singleton Copley Jane Kamensky, 2016-10-04 A stunning biography...[A] truly singular account of the American Revolution. –Amanda Foreman, author of *A World on Fire* Through an intimate narrative of the life of painter John Singleton Copley, award-winning historian Jane Kamensky reveals the world of the American Revolution, rife with divided loyalties and tangled sympathies. Famed today for his portraits of patriot leaders like Samuel Adams and Paul Revere, Copley is celebrated as one of America's founding artists. But, married to the daughter of a tea merchant and seeking artistic approval from abroad, he could not sever

his own ties with Great Britain. Rather, ambition took him to London just as the war began. His view from abroad as rich and fascinating as his harrowing experiences of patriotism in Boston, Copley's refusal to choose sides cost him dearly. Yet to this day, his towering artistic legacy remains shared by America and Britain alike.

Choreographing in Color J. Lorenzo

Perillo, 2020-08-24 In *Choreographing in Color*, J. Lorenzo Perillo investigates the development of Filipino popular dance and performance since the late 20th century. Drawing from nearly two decades of ethnography, choreographic analysis, and community engagement with artists, choreographers, and organizers, Perillo shifts attention away from the predominant Philippine neoliberal and U.S. imperialist emphasis on Filipinos as superb mimics, heroic migrants, model minorities, subservient wives, and natural dancers and instead asks: what does it mean for Filipinos to navigate the violent forces of empire and neoliberalism with street dance and Hip-Hop? Employing critical race, feminist, and performance studies, Perillo analyzes the conditions of possibility that gave rise to Filipino dance phenomena across viral, migrant, theatrical, competitive, and diplomatic performance in the Philippines and diaspora. Advocating for serious engagements with the dancing body, Perillo rethinks a staple of Hip-Hop's regulation, the euphemism, as a mode of social critique for understanding how folks have engaged with both racial histories of colonialism and gendered labor migration. Figures of euphemism - the zombie, hero, robot, and judge - constitute

a way of seeing Filipino Hip-Hop as contiguous with a multi-racial repertoire of imperial crossing, thus uncovering the ways Black dance intersects Filipino racialization and reframing the ongoing, contested underdog relationship between Filipinos and U.S. global power. Choreographing in Color therefore reveals how the Filipino dancing body has come to be, paradoxically, both globally recognized and indiscernible.

Color Space and Its Divisions Rolf G.

Kuehni,2003-04-28 It has been postulated that humans can differentiate between millions of gradations in color. Not surprisingly, no completely adequate, detailed catalog of colors has yet been devised, however the quest to understand, record, and depict color is as old as the quest to understand the fundamentals of the physical world and the nature of human consciousness. Rolf Kuehni's Color Space and Its Divisions: Color Order from Antiquity to the Present represents an ambitious and unprecedented history of man's inquiry into color order, focusing on the practical applications of the most contemporary developments in the field. Kuehni devotes much of his study to geometric, three-dimensional arrangements of color experiences, a type of system developed only in the mid-nineteenth century. Color spaces are of particular interest for color quality-control purposes in the manufacturing and graphics industries. The author analyzes three major color order systems in detail: Munsell, OSA-UCS, and NCS. He presents

historical and current information on color space developments in color vision, psychology, psychophysics, and color technology. Chapter topics include: A historical account of color order systems Fundamentals of psychophysics and the relationship between stimuli and experience Results of perceptual scaling of colors according to attributes History of the development of mathematical color space and difference formulas Analysis of the agreements and discrepancies in psychophysical data describing color differences An experimental plan for the reliable, replicated perceptual data necessary to make progress in the field Experts in academia and industry, neuroscientists, designers, art historians, and anyone interested in the nature of color will find *Color Space and Its Divisions* to be the authoritative reference in its field.

Pro OGRE 3D Programming Gregory Junker, 2007-02-01 *Pro OGRE 3D Programming* offers a detailed guide to the cross-platform Object-Oriented Graphics Rendering Engine (OGRE) 3D engine. OGRE provides an object-oriented interface to render 3D scenes. Commonly used in game creation, it can be utilized to create a variety of 3D based applications, including architectural visualization and simulations. The authors begin with obtaining the source code, move on to using the rendering library, and conclude with the polishing of the final application. Beginning-level knowledge of game design practices, intermediate-level knowledge of the C++ language, and a familiarity with open-source project-management tools such as CVS and Subversion are

all recommended.

Design and Implementation of 3D Graphics Systems
Jonas de Miranda Gomes, Luiz Velho, Mario Costa Sousa, 2012-08-08
Design and Implementation of 3D Graphics Systems covers the computational aspects of geometric modeling and rendering 3D scenes. Special emphasis is given to the architectural aspects of interactive graphics, geometric modeling, rendering techniques, the graphics pipeline, and the architecture of 3D graphics systems. The text describes basic 3D com

Upconversion Nanoparticles (UCNPs) for Functional Applications Vijay Kumar, Irfan Ayoub, Hendrik C. Swart, Rakesh Sehgal, 2023-09-17
This book explores upconversion nanoparticles (UCNPs) at both, the fundamental as well as applied levels, for functional applications. It provides a broad perspective about the synthesis approaches of UCNPs with the preferred size, improved and tunable upconversion luminescence, along with the combined multifunctionality for various applications. It highlights the fundamentals and systematic developments in the tuning of UC emission and surface engineering of UCNPs that make UCNPs convenient for use in a large range of applications. Moreover, it gives an understanding of the imposed limitations and challenges associated with these methods to achieve the desired performance in targeted

applications. It also includes the latest multifunctional lanthanide-based UCNP, which efficiently convert low-energy photons into high-energy photons, and their applications in fluorescent microscopy, deep-tissue bioimaging, nanomedicine, optogenetics, solid-state lighting, solar cells, security labeling, and volumetric display.
