3D Remote Sensing Applications in Forest Ecology Hooman Latifi,Ruben Valbuena,2019-11-19

Dear Colleagues, The composition, structure and function of forest ecosystems are the key features characterizing their ecological properties, and can thus be crucially shaped and changed by various biotic and abiotic factors on multiple spatial scales. The magnitude and extent of these changes in recent decades calls for enhanced mitigation and adaption measures. Remote sensing data and methods are the main complementary sources of up-to-date synoptic and objective information of forest ecology. Due to the inherent 3D nature of forest ecosystems, the analysis of 3D sources of remote sensing data is considered to be most appropriate for recreating the forest's compositional, structural and functional dynamics. In this Special Issue of Forests, we published a set of state-of-the-art scientific works including experimental studies, methodological developments and model validations, all dealing with the general topic of 3D remote sensing-assisted applications in forest ecology. We showed applications in forest ecology from a broad collection of method and sensor combinations, including fusion schemes. All in all, the studies and their focuses are as broad as a forest's ecology or the field of remote sensing and, thus, reflect the very diverse usages and directions toward which future research and practice will be directed.

3D Colourscapes: Magical Forest Anna Brett,2016-09-08 Create your very own fantasy forest world! This cool and creative colouring kit will spark children's imaginations. With so many card combinations, the fun doesn't stop once the cards have been coloured in - kids can keep creating new colourscapes with different card arrangements. Open the book to reveal 24 double-sided press-out sheets. Two of the sheets can be simply slotted together to form a base. The other card sheets can then be placed into this base, six at a time, to form a detailed 3D scene. The sheets have differently shaped die-cut holes in the centre, and are illustrated on both sides, ready to be coloured in a creative and beautiful way.

Mapping a forest or a land Olivier Rebiere,Cristina Rebiere, Want to design a 3D plan to create a recreational park, a tree climbing course, a house?Do you need a preliminary draft of a terrain to draw 3-dimensional plans and make your dream come true?You do not have the means or the desire to call on professionals and want to take the measurements by yourself?Discover a simple step-by-step,, which will allow you to take the necessary steps: you will need a compass , a clinometer and a some material.You will learn how to use the SketchUp Make software basic functions in order to create a cloud of points and a terrain with textures for an optimal 3D optimal rendering.Discover easy and cheap little books that will help you bring Nature into your daily life! We have more than a decade of experience in the design and construction of acrobatic tree climbing structures. We have developed

a simple method that will allow you to get good quality 3D plans :-) We want to share with you our useful knowledge and tips that will help you make significant savings. You will discover useful little handbooks, always at your fingertips :-) N°10 - Mapping a forest or a land In this issue we will see how to map trees or stakes spread over a sloping terrain and transcribe this cloud of points on a free 3D modeling software. What will you find within this Nature Passion? Notions of geometry and polar coordinates List of needed equipment Complete methodology (illustrations and tables) Introduction to using the SketchUp software Creating simple textures So, are you ready to map your land by yourself? Tree and Forest Measurement P. W. West, 2015-03-10 Forests must be measured if they are to be managed and conserved properly. This book describes the essential principles of modern forest measurement, whether using simple hand-held equipment or sophisticated satellite imagery. It particularly focuses on measuring forest biomass over large forest areas, a key aspect of climate change studies, as well as the volumes of wood that are commercially available. Written in a straightforward style, it will be accessible to anyone who works with forests, from the professional forester to the layperson. It considers not only how and why forests are measured but also the scientific basis of the measurements taken.
