Atlas of Remote Sensing for World Heritage: China Huadong

Guo,2015-11-17 Atlas of Remote Sensing for World Heritage:

China describes the UNESCO Natural and Cultural Heritage Sites in China and focuses on the interrelationship between culture and nature as well as on the breadth and complexity of China's world heritage sites. It emphasizes the application of space technology to world heritage, offering a vivid portrayal of China's forty world heritage sites and their surrounding environments by using multi-band, multi-resolution, multi-temporal spaceborne and airborne remote sensing data and 3D models. The book is a valuable resource for researchers in fields related to world heritage and to anyone with an appreciation of natural beauty and cultural landmarks. Professor Guo Huadong is the Director-General of the Center for Earth Observation and Digital Earth, the Chinese Academy of Sciences, China.

Media and Disaster Risk Reduction Rajib Shaw,Suvendrini

Kakuchi,Miki Yamaji,2021-03-16 This book analyzes recent advances, trends, challenges and potentials of the role of media in disaster risk reduction. Collaboration, co-design and co-delivery with other stakeholders in science technology, private sectors, and

civil society are found to be effective in reaching people and communities. The media is considered to be of utmost importance in all phases of disasters, before, during and after, with different types of media having different proactive roles to play in disaster risk reduction. Before disasters, they play essential roles not only in bringing early warning to people but also in enhancing their perception of the need to take action. At during- and post-disaster response recovery phases, community radio and social media are the key. These necessitate a resilient media infrastructure as the core of uninterrupted coverage. Media literacy has become an important issue for several stakeholders, including governments. In addition, more focus is placed on media governance to look at the priorities of disaster risk reduction initiatives within the media. All of these are considered to lead to trust in the media, which further improves people's disaster response actions based on information from the media, before and during disasters. Covering different aspects of media, this book is a valuable source for students, researchers, academics, policy-makers and development practitioners.

Management and Practices of Pilgrimage Tourism and Hospitality Gupta, S.K., Aragon, Lilibeth C., Kumar, Pankaj, S.,

Madhurima,Ramasamy, Rajesh,2023-10-09 Pilgrimage is one of the oldest extant and most basic forms of population mobility known to human society, and its political, social, cultural, and economic implications have always been, and continue to be substantial. In recent decades, a new focus on pilgrimage has emerged through the lens of tourism, which explores the political, cultural, behavioral, economic, and geographical impacts. Therefore, the identification of challenges in transformation and emerging ways and means of managing pilgrimage and related destinations is critical in an era of crises and disastrous situations. Management and Practices of Pilgrimage Tourism and Hospitality identifies, understands, and recognizes the changing facts and facets of pilgrimage tourism around the world. It develops and promotes pilgrimage tourism for community integration, faith-sharing, perseverance, tolerance, and pace for secular and sustainable futures. This book further identifies any new issues, scopes, challenges, and entrepreneurial opportunities for pilgrimage tourism as are found to be relevant and important for future pilgrimages with larger intensity and frequency. Covering topics such as behavioral challenges, community empowerment, and pilgrimage economy, this book is an essential resource for

entrepreneurs, professionals, researchers, academicians, policymakers, students of higher education, sociologists, and more.

Landslides: Detection, Prediction and Monitoring P.

Thambidurai, T. N. Singh, 2023-03-02 This book intends to decipher the knowledge in the advancement of understanding, detecting, predicting, and monitoring landslides. The number of massive landslides and the damages they cause has increased across the globe in recent times. It is one of the most devastating natural hazards that cause widespread damage to habitat on a local, regional, and global scale. International experts provide their experience in landslide research and practice to help stakeholders mitigate and predict potential landslides. The book comprises chapters on: Dynamics, mechanisms, and processes of landslides; Geological, geotechnical, hydrological, and geophysical modelling for landslides; Mapping and assessment of hazard, vulnerability, and risk associated with landslides; Monitoring and early warning of landslides; Application of remote sensing and GIS techniques in monitoring and assessment of landslides. The book will be of interest to researchers, practitioners, and decision-makers in adapting suitable modern techniques for landslide study.

Digital Preservation Technology for Cultural Heritage Mingquan

Zhou,Guohua Geng,Zhongke Wu,2012-12-04 Digital Preservation Technology for Cultural Heritage discusses the technology and processes in digital preservation of cultural heritage. It covers topics in five major areas: Digitization of cultural heritage; Digital management in the cultural heritage preservation; Restoration techniques for rigid solid relics; Restoration techniques for paintings; Digital museum. It also includes application examples for digital preservation of cultural heritage. The book is intended for researchers, advanced undergraduate and graduate students in Computer Graphics and Image Processing as well as Cultural heritage preservation. Mingquan Zhou is a professor at the College of Information Science and Technology, Beijing Normal University, China. Guohua Geng is a professor at the College of Information Science and Technology, Northwest University, Xi'an, China. Zhongke Wu is a professor at the College of Information Science and Technology, Beijing Normal University, China.

China Guang Guo,2010-08-24 A spectacular photographic tour of China's natural scenery and architectural landmarks, now available in a charming miniature edition. This attractive little volume takes us on a visual journey through the greatest splendors of China's varied geography and the chief monuments of its 5,000-

year-old civilization. Its 243 color photographs, which include 12 panoramic gatefolds, show us the country's most famous landmarks—like the Forbidden City and the Great Wall—as we have never seen them before, and and introduce us to less familiar but just as fascinating sights, like the the multicolored travertine lakes of Huanglong Valley and the beautiful calligraphic inscriptions on the rugged rocks of Mount Taishan. Extended captions at the back of the book provide a concise introduction to the history and significance of each of the forty-four locales depicted, twenty-eight of which have been designated as World Heritage sites by UNESCO.

Global Ocean Science Report Intergovernmental

Oceanographic Commission, UNESCO, 2020-12-14 The world ocean is a life-supporting system for humanity, yet it remains largely unknown. Based on data collected from around the world, the Global Ocean Science Report 2020 offers a global record of how, where and by whom ocean science is conducted. It monitors our capacity to understand the ocean and seize new opportunities. More generally, the Report underlines the essential role of ocean research and international cooperation for all key issues of the 21st century.

Manufacturing and Application of Stainless Steels Andrea Di

Schino, 2020-04-15 Stainless steels represent a quite interesting material family, both from a scientific and commercial point of view, following to their excellent combination in terms of strength and ductility together with corrosion resistance. Thanks to such properties, stainless steels have been indispensable for the technological progress during the last century and their annual consumption increased faster than other materials. They find application in all these fields requiring good corrosion resistance together with ability to be worked into complex geometries. Despite to their diffusion as a consolidated materials, many research fields are active regarding the possibility to increase stainless steels mechanical properties and corrosion resistance by grain refinement or by alloying by interstitial elements. At the same time innovations are coming from the manufacturing process of such a family of materials, also including the possibility to manufacture them starting from metals powder for 3D printing. The Special Issue scope embraces interdisciplinary work covering physical metallurgy and processes, reporting about experimental and theoretical progress concerning microstructural evolution during processing, microstructure-properties relations, applications including

automotive, energy and structural.

An Application of Game Theoretic Models to Water Resources Management Shouke Wei, 2015-05-17 Water quality degradation and water scarcity are two serious problems, and water resources management related to those problems usually involves conflicts. In the absence of market and exclusive property rights, those conflicts are unavoidable. Game theory is an appropriate approach to simulate and resolve such conflicts. The overall objective of this book is to develop a practical methodology and mechanism to promote the maximization of public welfare from a socio-economic and environmental perspective using game theory. There are three main goals: 1) to use game theory to illustrate and analyze phenomena of water resources management, 2) to set up non-cooperative and cooperative game theoretic simulation models of water conflicts in a river basin, and 3) to apply the game theoretic simulation approach into water conflicts involved in the Hanjiang River Basin (HRB) in China. The game theoretic simulation approach and results benefit not only different groups of water stakeholders, but also decision makers to make policies on water quantity allocation, water quality protection, water pricing as well as ecological compensation.

Application of Remote Sensing and GIS in Earthquake-

Triggered Landslides Chong Xu,Tolga Gorum,Hakan

Tanyas,2022-08-22

Engineering Geology for Society and Territory - Volume 6

Giorgio Lollino,Daniele Giordan,Kuroschi Thuro,Carlos Carranza-

Torres,Faquan Wu,Paul Marinos,Carlos Delgado,2014-08-30 This

book is one out of 8 IAEG XII Congress volumes, and deals with

the theme of applied geology, which is a critical theme for the

global economy. In the international, multidisciplinary approach to

major engineering projects (either to macro- or mega-scale), the

application of geological investigation techniques is fundamental for

properly selecting the location sites, planning the construction and

maintaining the infrastructures. The contributions in this book

include not only engineering constructions but also case studies

related to large projects on geo-resources exploration and

extraction (minerals, petroleum and groundwater), energy

production (hydropower, geothermal, nuclear and others),

transportation (railway and highway) and waste disposal as well as

the environmental management of these and other activities. The

Engineering Geology for Society and Territory volumes of the IAEG

XII Congress held in Torino from September 15-19, 2014, analyze

the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: Environment, processes, issues, and approaches. The congress topics and subject areas of the 8 IAEG XII Congress volumes are: 1. Climate Change and Engineering Geology 2. Landslide Processes 3. River Basins, Reservoir Sedimentation and Water Resources 4. Marine and Coastal Processes 5. Urban Geology, Sustainable Planning and Landscape Exploitation 6. Applied Geology for Major Engineering Projects 7. Education, Professional Ethics and Public Recognition of Engineering Geology 8. Preservation of Cultural Heritage.

Tourism and Trails Dallen J. Timothy, Stephen W. Boyd, 2015

This book provides a comprehensive overview of trails and routes from a tourism and recreation perspective. This cutting-edge volume addresses conceptual and management issues systematically, examining supply, demand, development and impacts associated with trails and routes.

Measuring, Modeling and Predicting the Seismic Site Effect

Yefei Ren, Giovanni Lanzano, Yadab P. Dhakal, Behzad

Hassani, Kun Ji, 2024-01-25 As recognized universally by both seismology and earthquake engineering communities, the

amplitude and frequency content of ground motions are influenced by local site effects, including the effects of near-surface geologic materials, surface topographic and basin effects, and so on. Strong linkage between seismic site effect and earthquake damage has been commonly demonstrated from many past earthquakes.

Therefore, quantitative and reliable evaluation of the seismic site effect is one of the crucial aspects in seismic hazard assessment and risk mitigation. With the significant advancement of modern seismic monitoring networks and arrays, huge amounts of high-quality seismic records are now being accumulated. This encourages us to measure the site responses and its associated uncertainty for selected seismic stations by some record-dependent approaches, such as horizontal-to-vertical spectral ratio (HVSr) measurements, generalized spectral inversion (GIT) methods, etc. Machine learning techniques also show significant promise in characterization of the near-surface geologic properties and prediction of site response. These data-driven approaches help us to better understand the physics of spatial and temporal variabilities of ground motions. Due to more and more site-specific data being captured, invoking non-ergodic assumptions in seismic response analysis has recently been a topic of great interest in the

community. For specific site response analysis, numerical simulations are carried out to model the dynamic process of seismic waves propagating and scattering in the subsurface strata. With development of modeling capacity, great efforts have been taken to evaluate quantitatively the complex 2D and 3D effects on seismic site response.

Molecular Phylogeny and Evolution of Carabid Ground Beetles

S. Osawa, Z.-H. Su, Y. Imura, 2011-06-27 Carabid ground beetles, sometimes called walking jewels, are among the most thoroughly investigated insects in the world. This book presents the results of molecular phylogenetic analyses of 2000 specimens, including 350 species and that cover more than 90% of the known genera, from 500 localities in 35 countries. These comprehensive analyses using mitochondrial DNA-based dating suggest that carabid diversification took place about 40 to 50 million years ago as an explosive radiation of the major genera, coinciding with the collision of the Indian subcontinent and Eurasian land mass. The analyses also lead to surprising conclusions suggesting discontinuous evolution and parallel morphological evolution. With numerous color illustrations, this book presents readers with the dynamic principles of evolution and the magnificent geographic history of the earth as

revealed by the study of beetles.

Index to China Daily ,1992

Geotechnical Engineering V.N.S. Murthy,2002-10-25 A must have reference for any engineer involved with foundations, piers, and retaining walls, this remarkably comprehensive volume illustrates soil characteristic concepts with examples that detail a wealth of practical considerations, It covers the latest developments in the design of drilled pier foundations and mechanically stabilized earth retaining wall and explores a pioneering approach for predicting the nonlinear behavior of laterally loaded long vertical and batter piles. As complete and authoritative as any volume on the subject, it discusses soil formation, index properties, and classification; soil permeability, seepage, and the effect of water on stress conditions; stresses due to surface loads; soil compressibility and consolidation; and shear strength characteristics of soils. While this book is a valuable teaching text for advanced students, it is one that the practicing engineer will continually be taking off the shelf long after school lets out. Just the quick reference it affords to a huge range of tests and the appendices filled with essential data, makes it an essential addition to an civil engineering library.

Advancing Culture of Living with Landslides Kyoji

Sassa, Matjaž Mikoš, Yueping Yin, 2017-05-16 This book is open access under a CC BY 4.0 license. This volume contains peer-reviewed papers from the Fourth World Landslide Forum organized by the International Consortium on Landslides (ICL), the Global Promotion Committee of the International Programme on Landslides (IPL), University of Ljubljana (UL) and Geological Survey of Slovenia in Ljubljana, Slovenia from May 29 to June 2, 2017. The complete collection of papers from the Forum is published in five full-color volumes. This first volume contains the following:

- Three forum lectures
- Background and Content of the Sendai Partnerships 2015–2025
- Contribution from the signatory organizations of the Sendai Partnerships
- Landslide Dynamics: ISDR-ICL Landslide Interactive Teaching Tools (LIT T)
- Progress of the World Report on Landslides (WRL)
- International Programme on Landslides (IPL): Objects, History and List of WCoE/IPL projects
- UNESCO-KU-ICL UNITWIN Network supporting IPL
- Landslides: Journal of International Consortium on Landslides
- International Programme on Landslides (IPL): WCoEs and IPL Projects
- Landslides and Society

Prof. Kyoji Sassa is the Founding President of the International Consortium on Landslides (ICL). He is Executive Director of ICL and the Editor-in-Chief of

International Journal Landslides since its foundation in 2004. Prof. Matjaž Mikoš is the Forum Chair of the Fourth World Landslide Forum. He is the Vice President of International Consortium on Landslides and President of the Slovenian National Platform for Disaster Risk Reduction. Prof. Yueping Yin is the President of the International Consortium on Landslides and the Chairman of the Committee of Geo-Hazards Prevention of China, and the Chief Geologist of Geo-Hazard Emergency Technology, Ministry of Land and Resources, P.R. China. IPL (International Programme on Landslides) is a programme of the ICL. The programme is managed by the IPL Global Promotion Committee including ICL and ICL supporting organizations, UNESCO, WMO, FAO, UNISDR, UNU, ICSU, WFEO, IUGS and IUGG. The IPL contributes to the United Nations International Strategy for Disaster Reduction and the ISDR-ICL Sendai Partnerships 2015–2025.

Marketing for Sustainable Tourism Umberto Martini, Federica Buffa, 2020-05-13 The aim of the Special Issue is to discuss the main current topics concerning marketing for sustainable tourism with reference to territories (i.e., tourism destinations, protected areas, parks and/or natural sites, UNESCO World Heritage Sites, rural regions/areas, etc.) and tourism enterprises and/or

organisations (i.e., destination management organisations, hospitality enterprises, restaurant enterprises, cableway companies, travel agencies, etc.). In destinations where natural resources are pull factors for tourism development, the relationships among local actors (public, private, and local community), as well as marketing choices, are essential to develop sustainable tourism products. To this end, the Special Issue encourages papers that analyse marketing strategies adopted by tourism destinations and/or tourism enterprises to avoid overtourism, to manage mass sustainable tourism (as defined by Weaver, 2000), and to encourage and promote sustainable tourism in marginal areas or in territories suffering lack of integration in the tourism offer. Special attention will be given to contributions on the best practices to manage territories and/or enterprises adopting sustainable marketing strategies.

Introduction to the Science Popularization Industry Fujun Ren, Yizhong Zhang, Guangbin Liu, 2021-08-12 This book systematically introduces the popular science industry. It firstly summarizes the social basis and research status of the development of contemporary science popularization industry and also elaborates on the basic theory and main forms of science

popularization industry. The most important feature of this book is its focus on the practice and case study of the development of science popularization industry in China. Meanwhile, it analyzes the development of science popularization industry in China from four perspectives: the basis and conditions, the current situation and countermeasures, the main promotion tasks, and the policy suggestions for promotion. The book analyzes the development trend of science popularization industry in China. It can be used as a reference book for science popularization practitioners and enthusiast to learn and understand the theory and practice of science popularization industry. It can also be used as a textbook for the cultivation and training of science popularization talents.

Remote Sensing of Land Use and Land Cover Chandra P. Giri, 2016-04-19 Filling the need for a comprehensive book that covers both theory and application, Remote Sensing of Land Use and Land Cover: Principles and Applications provides a synopsis of how remote sensing can be used for land-cover characterization, mapping, and monitoring from the local to the global scale. With contributions by leading scientists from aro
