**LEO the Maker Prince** Carla Diana,2013-12-02 LEO the Maker Prince teaches children (both young and old) about 3D printing by following Carla and LEO's journey through Brooklyn. LEO is a walking, talking robot who has the magical ability to to print (in plastic) any object that Carla draws. The other robots have their own special capabilities: H1-H0 prints in metal, Sinclair-10 can find and print objects from a huge catalog of designs, and the others (including AL1C3-D, IRIS-7, and NiXie) have unique talents, too. Readers can come along for the journey, too: all of the objects in the book are printable one way or another.

Did Leonardo Da Vinci Create Paintings In 3D ?? Leo Atreides,2019-12-27 Leonardo Da Vinci was a genius that was ahead of his time. Although most of his notes have gone lost, in what we have left we find he mentions things like telescopes before being invented and his drawings of the human heart were so detailed that doctors and surgeons still marvel at his conclusions. And we know he was one of the great renaissance artists. Able to make paintings like the Last Supper that drew people from near and far just to see it. So is it possible that with his fascination of perception that he found how to show a true representation of a subject with multiple paintings seen in crossview. In essence, discovering the aspects of 3D years before it was thought? And could this also possibly have been done to mark and note differences in order to highlight hidden images or gives us clues that only come together when two painting are placed next to each other We also look at other artists that show indications of having made versions of some of their best works and how these paintings fit in the Goldilocks Range of subjective verses objective. This is a companion book to the video series on YouTube called Leonardo da Vinci, Down the Rabbit Hole and is being released in conjunction with the 3rd video in the series. You can find my channel by searching for Leo Atreides. So join me on this amazing journey as I have so much more to show you before I'm done: )

**Thinking 3D** Daryl Green,Laura Moretti,2019 During the Renaissance, artists and illustrators developed the representation of truthful three-dimensional forms into a highly skilled art. As reliable illustrations of three-dimensional subjects became more prevalent, they also influenced the ways in which disciplines developed: architecture could be communicated much more clearly, mathematical concepts and astronomical observations could be quickly relayed, and observations of the natural world moved towards a more realistic method of depiction. Through essays on some of the world's greatest artists and thinkers--such as Leonardo da Vinci, Luca Pacioli, Andreas Vesalius, Johann Kepler, Galileo Galilei, William Hunter, and many more--this book tells the story of how of we learned to communicate three-dimensional forms on the two-dimensional page. It features some of Leonardo da Vinci's ground-breaking drawings now in the Royal Collections and British Library as well as extraordinary anatomical illustrations, early paper engineering such as volvelles and flaps, beautiful architectural plans, and even views of the moon. With in-depth analysis of more than forty manuscripts and books, Thinking 3D also reveals the impact that developing techniques had on artists and draftsmen throughout time and across space, culminating in the latest innovations in computer software and 3D printing.
