Manufacturing In The Era Of 4th Industrial Revolution: A World Scientific Reference (In 3 Volumes) ,2021-01-13 The era of the fourth industrial revolution has fundamentally transformed the manufacturing landscape. Products are getting increasingly complex and customers expect a higher level of customization and quality. Manufacturing in the Era of 4th Industrial Revolution explores three technologies that are the building blocks of the next-generation advanced manufacturing. The first technology covered in Volume 1 is Additive Manufacturing (AM). AM has emerged as a very popular manufacturing process. The most common form of AM is referred to as 'three-dimensional (3D) printing'. Overall, the revolution of additive manufacturing has led to many opportunities in fabricating complex, customized, and novel products. As the number of printable materials increases and AM processes evolve, manufacturing capabilities for future engineering systems will expand rapidly, resulting in a completely new paradigm for solving a myriad of global problems. The second technology is industrial robots, which is covered in Volume 2 on Robotics. Traditionally, industrial robots have been used on mass production lines, where the same manufacturing operation is repeated many times. Recent advances in human-safe industrial robots present an opportunity for creating hybrid work cells, where humans and robots can collaborate in close physical proximities. This Cobots, or collaborative robots, has opened up to opportunity for humans and robots to work more closely together. Recent advances in artificial intelligence are striving to make industrial robots more agile, with the ability to adapt to changing environments and tasks. Additionally, recent advances in force and tactile sensing enable robots to be used in complex manufacturing tasks. These new capabilities are expanding the role of robotics in manufacturing operations and leading to significant growth in the industrial robotics area. The third technology covered in Volume 3 is augmented and virtual reality. Augmented and virtual reality (AR/VR) technologies are being leveraged by the manufacturing community to improve operations in a wide variety of ways. Traditional applications have included operator training and design visualization, with more recent applications including interactive design and manufacturing planning, human and robot interactions, ergonomic analysis, information and knowledge capture, and manufacturing simulation. The advent of low-cost solutions in these areas is accepted to accelerate the rate of adoption of these technologies in the manufacturing and related sectors. Consisting of chapters by leading experts in the world, Manufacturing in the Era of 4th Industrial Revolution provides a reference set for supporting graduate programs in the advanced manufacturing area.

Graphene-based 3D Macrostructures for Clean Energy and Environmental Applications Professor Rajasekhar Balasubramanian,Professor Shamik Chowdhury,2021-04-07 With escalating global population, increased consumption of fossil fuels, spiralling energy demand, rapid environmental degradation and global climate change, energy and environmental issues are receiving considerable attention worldwide from the purview of sustainable development. In order to address these complex and interlinked challenges, the development of new materials for affordable green energy technologies (batteries, supercapacitors, fuel cells and solar cells) and environmental remediation methods (adsorption, photocatalysis, separation, and sensing) is essential. Three-dimensional graphene-based macrostructures (3D GBMs) are of great interest in these applications given their large surface area and adaptable surface chemistry. Graphene-based 3D Macrostructures for Clean Energy and Environmental Applications provides a critical and comprehensive account of the recent advances in the development and potential applications of high performance 3D GBMs for tackling global energy and environmental issues in a sustainable manner. Particular attention is paid to the fabrication schemes, modulation of physiochemical properties, and their integration into practical devices, and the roles of surface chemistry and pore morphology, as well as their interplay, on the overall performance of 3D GBMs are examined. With contributions from authors around the world this book is a useful resource for both environmental scientists interested in sustainable energy and remediation solutions and materials scientists interested in applications for 3D GBMs.

Hierophantic Landscapes Richard Leviton,2011-09-26 The Earth is poised to make a great disclosure. It's a hierophant. But what's a hierophant? A person who reveals the holy light. But it can also be a landscape or a planet. And what's the holy light? It is the structure of reality and consciousness, a map of the heavenly realms, the engineering blueprint of Creation. Some people call this imminent disclosure the Apocalypse and run for cover. But that is mistaken. Apocalypse means the revelation of the divine revelation. It means the end of our picture of the world as we know it. The world itself will be fine, even better than fine. Splendid. Illumined. The Architect of reality lays down His cards, face up, and you see the whole deck. Here is the truth of yourself and the Earth. How will this disclosure work? What we call sacred sites and holy landscapes will start revealing themselves in full to us in all their geomantic and visionary richness. That's the inner patterning of their design, their arrays of Light temples and subtle palaces primed for our visionary adventures and edification. The Earth needs us to have these adventures and visions because that's how we keep the planet healthy. Hierophantic Landscapes visits five landscapes from Norway and England to California and Mexico, providing firsthand reports on the visions and adventures of a small band of geomancers as they seek to unravel the mysteries of the Earth. Maybe not such a small band, because along the way we encounter angels, landscape devas, Nature Spirits, and otherworldly mentors, and revel in vistas of the ancient past of the Earth when that revelation was as fresh as a sunrise, as it will soon be again.
