The Funnel: From the Skull Base to the Sacrum Massimiliano Visocchi,2024-01-29 Skull-base surgery is a minimally invasive endoscopic procedure, which involves the surgeon inserting instruments through the natural openings in the skull—the nose or mouth—or by making a small hole just above the eyebrow. This type of surgery requires a team of specialists, which may include ENT (ear, nose, and throat), maxillofacial and neurosurgeons, as well as radiologists. The craniovertebral junction (CVJ) has a unique anatomical bone and neurovascular structure, which not only separates the subaxial cervical spine but also provides a special cranial flexion, extension and axial rotation pattern. As such, a sound knowledge of the basic principles of spine instrumentation and the region's kinematics are essential when it comes to strategic preoperative planning. Skull-base, craniovertebral junction, spine demolitive and reconstructive surgery, neuromodulation, bioengineering and transplantation are recent tools used to improve reconstruction, restoration and rehabilitation – three key words central to the core aim of the Neurorehabilitation and Reconstruction Committee of the WFNS, which is to promte mechanical morphological and functional restoration.

The Advances of Endoscopic Skull Base Tumor Surgery: from Basic to Clinical Research Peng Zhao,Yazhuo Zhang,Luigi Maria Cavallo,Songbai Gui,2023-11-09 For neurosurgeons, skull base neurosurgery is as complex, dangerous, challenging, and charming as Mount Everest. The vigorous development of neuroendoscopy has opened a new perspective for skull base neurosurgery. Due to the special structure of skull base, there are often blind spots left out by microscope, while neuroendoscopy is the promising technology to overcome the defects. With its minimally invasive advantages, neuroendoscopy is gradually becoming popular in neurosurgical operation. In recent years, neuroendoscopic surgery for pituitary adenoma, the anterior skull base and sellar turcica meningioma, clivus chordoma and tumors in the foramen magnum area have been reported, as well as for atlantoaxial lesions. Neuroendoscopy for skull base midline surgical area has attracted accumulating attention, and its application is widely used in basic and clinical research.

Nano- and Microfabrication Techniques in Drug Delivery Dimitrios Lamprou,2023-04-27 New materials and manufacturing techniques are evolving with the potential to address the challenges associated with the manufacture of medicinal products that will teach new tricks to old drugs. Nano- and microfabrication techniques include manufacturing methods such as additive manufacturing, lithography, micro-moulding, spray drying, and supercritical fluids among many others. The increasing resolution of new techniques allow researchers to produce objects with micrometric resolutions. This book follows a consecutive order, beginning with a background in the current field and limitations in the manufacturing of different pharmaceutical products, moving on the classification of each method by providing recent examples, and future prospective on a variety of traditional and new Nano and microfabrication techniques. A focus on the materials used to prepare these systems and their biocompatibility, including applied topics such as clinical applications and regulatory aspects also covered, offering the reader a holistic view of this rapidly growing field.

Biomedical Visualisation Paul M. Rea,2019-03-27 This edited volume explores the use of technology to enable us to visualise the life sciences in a more meaningful and engaging way. It will enable those interested in visualisation techniques to gain a better understanding of the applications that can be used in imaging and analysis, education, engagement and training. The reader will be able to explore the utilisation of technologies from a number of fields to enable an engaging and meaningful visual representation of the life sciences. This use of technology-enhanced learning will be of benefit for the learner, trainer, in patient care and the wider field of education and engagement. By examining a range of techniques in image capture (photogrammetery, stereophotogrammetry, microphotogrammetry and autostereoscopy), this book will showcase the wide range of tools we can use. Researchers in this field will be able to find something suitable to apply to their work to enhance user engagement through improved visual means using the technologies we have available to us today. It will highlight the uses of these technologies to examine many aspects of the human body, and enable improved ways to enhance visual and tactile learning, including 3D printing. By demonstrating co-design processes, working directly with the end-stage users (including patients), it will also highlight successes in adopting tools like hand motion tracking rehabilitation for patients with conditions like multiple sclerosis. The book will also discuss the applications of immersive environments including virtual, augmented and mixed reality. The ultimate aim is to show how, by using these tools, we can enhance communication, mobile applications, health literacy and illustration of both normal and pathological processes in the body. By applying a wide range of tools and technologies, this volume will highlight the wide range of applications in education, training and learning both for students and faculty, but also for patient care and education. Therefore, the work presented here can be accessed by a wide range of users from faculty and students involved in the design and development of these processes, by examining the pedagogy around these technologies. Importantly, it presents material, which will be of benefit for the patient, engaging them to become more involved with techniques like physiotherapy.

Visual Heritage: Digital Approaches in Heritage Science Eugene Ch'ng,Henry Chapman,Vincent Gaffney,Andrew S. Wilson,2022-04-05 How we understand our shared and individual heritage, interpret and disseminate that knowledge is increasingly central to contemporary society. The emerging context for such development is the field of heritage science. Inherently interdisciplinary, and involving both the Arts and Humanities, engineering, conservation and the digital sciences, the development of heritage science is a driver for change; socially, economically and technically. This book has gathered contributions from leading researchers from across the world and provides a series of themed contributions demonstrating the theoretical, ethical, methodological and technical methods which lie at the heart of heritage science. Archaeology, conservation, museology, the arts, forensic sciences, and heritage management are represented through collaborative research with specialists in applied technologies including object and terrestrial laser scanning, multi-spectral imaging, visualisation, GIS and 3D-printing. Together, the chapters present important case studies to demonstrate the recent advances and best practise within the discipline, highlighting the value of digital transformation across the heritage community that includes objects, monuments, sites and landscapes spanning two million years of natural and cultural history from all over the world. Visual Heritage: Digital Approaches in Heritage Science is aimed at a broad academic and practice-led readership, which extends across many disciplines and will be of considerable value to scholars, practitioners, and students working within heritage and computer science at all levels. The content, which applies heritage science across two million years of cultural history will be appreciated by a general audience, as well as those wishing simply to explore the vast range of potential technical applications across all the disciplines represented in the book.

Anatomy of Cranial Arteries, Embryology and Variants Thomas Robert,Sara Bonasia,Michel W. Bojanowski,2023-09-30 This book on the anatomy of central nervous system arteries concentrates on all anatomical variations of the central nervous system and it describes the embryological processes that hide behind the possible adult variants. The first section of the work is a reminder of general concepts of embryology. After that, each section corresponds to arteries of an anatomical location: intradural, dural, skull base and cranio-cervical junction. Each chapter is dedicated to a single artery to facilitate the reader's search for information. In addition, modern and detailed illustrations of the embryological steps and adult variants are included. There are two types of illustrations: artist's drawing, usually to explain the vascular embryology, and angiographic images. The central point of the book lies in the space devoted to the embryological development of each artery and the processes that can lead to the development of different variants in the adult. The audience of this book is aimed at neurosurgeons and neuroradiologists, specialists in the neurovascular area, but it will also help residents in neurosurgery, neuroradiology and neurology in their daily practice.
