Building Interactive Worlds in 3D Jean-Marc Gauthier, 2013-05-02 In *Building Interactive Worlds in 3D* readers will find turnkey tutorials that detail all the steps required to build simulations and interactions, utilize virtual cameras, virtual actors (with self-determined behaviors), and real-time physics including gravity, collision, and topography. With the free software demos included, 3D artists and developers can learn to build a fully functioning prototype. The book is dynamic enough to give both those with a programming background as well as those who are just getting their feet wet challenging and engaging tutorials in virtual set design, using Virtools. Other software discussed is: Lightwave, and Maya. The book is constructed so that, depending on your project and design needs, you can read the text or interviews independently and/or use the book as reference for individual tutorials on a project-by-project basis. Each tutorial is followed by a short interview with a 3D graphics professional in order to provide insight and additional advice on particular interactive 3D techniques-from user, designer, artist, and producer perspectives.

3D Cinematic Aesthetics and Storytelling Yong Liu, 2018-07-05 This book argues that 3D films are becoming more sophisticated in utilising stereoscopic effects for storytelling purposes. Since *Avatar* (2009), we have seen a 3D revival marked by its integration with new digital technologies. With this book, the author goes beyond exploring 3D's spectacular graphics and considers how 3D can be used to enhance visual storytelling. The chapters include visual comparisons between 2D and 3D to highlight their respective narrative features; an examination of the narrative tropes and techniques used by contemporary 3D filmmakers; and a discussion of the narrative implications brought by the coexistence of flatness and depth in 3D visuality. In demonstrating 3D cinematic aesthetics and storytelling, Yong Liu analyses popular films such as *Hugo* (2011), *Life of Pi* (2012), *Gravity* (2013), *Star Trek Into Darkness* (2013), and *The Great Gatsby* (2013). The book is an investigation into contemporary forms of stereoscopic storytelling derived from a unique, long-existing mode of cinematic illusions.

3D Materials and Construction Possibilities Loretta Waldman, 2017-12-15 Most students will work with a plastic when making things with a 3D printer, but that is only scratching the surface of materials that can be used in these machines. This book takes a look at the different materials that can be used by 3D printers, what those materials can make, and the advantages and disadvantages for each.

Ultimate Speed Samuel Hawley,Craig Breedlove,2018-10-02 An L.A. hot rodder with a high school education, a family to support and almost no money, Craig Breedlove set out in the late 1950s to do something big: harness the thrust of a jet in a car. With a growing obsession that would cost him his marriage, he started building in his dad's garage. The car's name: Spirit of America. Through perseverance and endless hard work, Craig completed Spirit and broke the land speed record on the Bonneville Salt Flats, setting a new mark of 407 mph in 1963. In the early 1970s he turned to rockets and set an acceleration record at Bonneville that stands to this day. He built a jet car in the 1990s, Spirit of America-Sonic Arrow, to go head-to-head against Britain's ThrustSSC to be the first to Mach One. Craig's subsequent crash at 675 mph remains the fastest in history. Even today, at the age of 80, he is going strong with plans for yet another Spirit of America racer. The ultimate goal: 1,000 mph. Ultimate Speed is the authorized biography of Craig Breedlove, a candid revelation of one of motorsports' most interesting figures based primarily on countless hours of interviews with Craig and dozens of people connected to his life.
