Virtual Space Lars Qvortrup,J.F. Jensen,E. Kjems,N. Lehmann,C. Madsen,2011-06-28

Containing the edited research papers resulting from an ambitious, cross-disciplinary research project, this volume examines the spatiality of virtual inhabited 3D worlds - virtual reality and cyberspace. (Three other volumes look at Interaction, Staging and Methodology.) It is about the communication spaces emerging at the Internet and supported by special 3D interfaces. It is also about the virtual spaces created by virtual reality hardware (CAVEs, panoramic screens, head mounted display systems etc.) and software. Virtual Space: Spatiality in Virtual Inhabited 3D Worlds is interdisciplinary. It deals with philosophical, psychological, communicational, technological and aesthetic aspects of space. While philosophy raises the question concerning the ontology of space - what is space - psychology deals with our perception of space. Communication theory looks at the way in which space supports communication (i.e. that space is a medium for communication), and finally aesthetic analyses exemplify the use of virtual space in virtual cities, in museums and in art.

Polarized Light and the Mueller Matrix Approach José J. Gil, Razvigor Ossikovski, 2022-06-22 An Up-to-Date Compendium on the Physics and Mathematics of Polarization Phenomena Now thoroughly revised, Polarized Light and the Mueller Matrix Approach cohesively integrates basic concepts of polarization phenomena from the dual viewpoints of the states of polarization of electromagnetic waves and the transformations of these states by the action of material media. Through selected examples, it also illustrates actual and potential applications in materials science, biology, and optics technology. The book begins with the basic concepts related to two- and three-dimensional polarization states. It next describes the nondepolarizing linear transformations of the states of polarization through the Jones and Mueller-Jones approaches. The authors then discuss the forms and properties of the Jones and Mueller matrices associated with different types of nondepolarizing media, address the foundations of the Mueller matrix, and delve more deeply into the analysis of the physical parameters associated with Mueller matrices. The authors proceed with introducing the arbitrary decomposition and other useful parallel decompositions, and compare the powerful serial decompositions of depolarizing Mueller matrices. They also analyze the general formalism and specific algebraic quantities and notions related to the concept of differential Mueller matrix. Useful approaches that provide a geometric point of view on the polarization effects exhibited by different types of media are also comprehensively described. The book concludes with a new chapter devoted to the main procedures for filtering measured Mueller matrices. Suitable for advanced graduates and more seasoned professionals, this book covers the main aspects of polarized radiation

and polarization effects of material media. It expertly combines physical and mathematical concepts with important approaches for representing media through equivalent systems composed of simple components.

Welcome to the Universe in 3D Neil deGrasse Tyson, Michael A. Strauss, J. Richard Gott, Robert J. Vanderbei, 2022-04-19 Presenting a rich array of stereoscopic color images, which can be viewed in 3D using a special stereo viewer that folds easily out of the cover of the book, this book reveals your cosmic environment as you have never seen it before. Journey into the vast depths of the observable universe by visualising the most spectacular images in astronomy in stereoscopic 3D. Welcome to the Universe in 3D takes you on a grand tour of the observable universe, guiding you through the most spectacular sights in the cosmos in breathtaking 3D. Astronomy is the story of how humankind's perception of the two-dimensional dome of the sky evolved into a far deeper comprehension of an expanding three-dimensional cosmos. This book invites you to take part in this story by exploring the universe in depth, as revealed by cutting-edge astronomical research and observations. You will journey from the Moon through the solar system, out to exoplanets, distant nebulae, and galaxy clusters, until you finally reach the cosmic microwave background radiation (or CMB), the most distant light we can observe. The distances to these celestial wonders range from 1.3 light-seconds to 13.8 billion light-years. Along the way, the authors explain the fascinating features of what you are seeing, including how the 3D images were made using the same technique that early astronomers devised to measure distances to objects in space. The dramatic 3D images in this one-of-a-kind book will astonish you, extending your vision out to the farthest reaches of the universe. You will

never look up into the night sky the same way again.

Virtual Interaction: Interaction in Virtual Inhabited 3D Worlds E. Granum, Lars Qvortrup, B. Holmqvist, S. Kolstrup, K. Halskov Madsen, 2013-03-09 Lars Qvortrup The world of interactive 3D multimedia is a cross-institutional world. Here, researchers from media studies, linguistics, dramaturgy, media technology, 3D modelling, robotics, computer science, sociology etc. etc. meet. In order not to create a new tower of Babel, it is important to develop a set of common concepts and references. This is the aim of the first section of the book. In Chapter 2, Jens F. Jensen identifies the roots of interaction and interactivity in media studies, literature studies and computer science, and presents definitions of interaction as something going on among agents and agents and objects, and of interactivity as a property of media supporting interaction. Similarly, he makes a classification of human users, avatars, autonomous agents and objects, demonstrating that no universal differences can be made. We are dealing with a continuum. While Jensen approaches these categories from a semiotic point of view, in Chapter 3 Peer Mylov discusses similar issues from a psychological point of view. Seen from the user's perspective, a basic difference is that between stage and back-stage (or rather: front-stage), i. e. between the real I and we and the virtual, representational I and we. Focusing on the computer as a stage, in Chapter 4 Kjølner and Lehmann use the theatre metaphor to conceptualize the stage phenomena and the relationship between stage and front-stage.

The Business Of Book Publishing Elizabeth Geiser,Arnold Dolin,Gladys Topkis,2019-06-04 When the first University of Denver Publishing Institute came to a close in August 1976, all of us involved in its launching knew that we had a real success on our hands. And we knew it was due in great measure to an outstanding faculty of more than forty top publishing executives who had come to Denver during those four weeks to teach our students. How regrettable, it seemed, that their knowledge and expertise were available only to the eighty students handpicked for that first class. Fred Praeger, publisher of Westview Press, suggested a solution. Do a book, he invited, and let Westview publish the curriculum for others to share.

Museums and Technologies of Presence Maria Shehade,Theopisti Stylianou-

Lambert,2023-09-07 In view of the ever-increasing use of interactive and emerging technologies in museum spaces, *Museums and Technologies of Presence* rethinks the role of such technologies as potential facilitators of presence and as vehicles for offering new, immersive, and embodied visitor experiences. This edited collection presents theoretical approaches and case studies that explore how presence can be experienced in museum spaces and what role technology can play in visitor experiences. It considers the theoretical underpinnings of the concept 'presence' for museum spaces, offering a critical examination of how immersive and other emerging technologies can affect, diminish or enhance our sense of presence and embodiment. Through an international range of case studies and innovative projects, this volume considers emerging technologies – including virtual reality, augmented reality, interactive (multisensory) installations, and AI – alongside different aspects of presence, including immersion, embodiment, empathy, emotion, engagement, and affect. Taking an interdisciplinary approach, *Museums and Technologies of Presence* will be beneficial to those researching or studying in the fields of Museum Studies, Digital Humanities, Computer Science, Information Science, and Digital Media. It will also be useful to museologists, curators, and artists who are interested in developing immersive experiences, experimental new media, and immersive aesthetics.

Structured Singular Light Fields Eileen Otte, 2020-12-21 Structured singular light is an

ubiquitous phenomenon. It is not only created when light refracts at a water surface but can also be found in the blue daytime sky. Such light fields include a spatially varying amplitude, phase, or polarization, enabling the occurrence of optical singularities. As structurally stable units of the light field, these singularities are particularly interesting since they determine its topology. In this excellent book, the author presents a pioneering study of structured singular light, thereby contributing many original approaches. Especially in the field of polarization and its rich number of different types of singularities the book defines and drives a completely new field. The work demonstrates how to control complex polarization singularity networks and their propagation. Additionally, the author pioneers tightly focusing vectorial beams, also developing an urgently needed detection scheme for three-dimensional nanoscale polarization structures. She also studies classical spatial entanglement using structured light, introducing entanglement beating and paraxial spin-orbit-coupling. The book is hallmarked by its comprehensive and thorough way of describing a plethora of different approaches to structure light by amplitude, phase and polarization, as well as the important role of optical singularities.
