**Web Dynamics** Mark Levene,Alexandra Poulouvassilis,2013-03-09 The World Wide Web has become a ubiquitous global tool, used for finding information, communicating ideas, carrying out distributed computation and conducting business, learning and science. The Web is highly dynamic in both the content and quantity of the information that it encompasses. In order to fully exploit its enormous potential as a global repository of information, we need to understand how its size, topology and content are evolving. This then allows the development of new techniques for locating and retrieving information that are better able to adapt and scale to its change and growth. The Web's users are highly diverse and can access the Web from a variety of devices and interfaces, at different places and times, and for varying purposes. We thus also need techniques for personalising the presentation and content of Web based information depending on how it is being accessed and on the specific user's requirements. As well as being accessed by human users, the Web is also accessed by applications. New applications in areas such as e-business, sensor networks, and mobile and ubiquitous computing need to be able to detect and react quickly to events and changes in Web-based information. Traditional approaches using query-based 'pull' of information to find out if events or changes of interest have occurred may not be able to scale to the quantity and frequency of events and changes being generated, and new 'push' -based techniques are needed.

**The Cowboy's Companion** Paul C. Brady, Patrick J. Denard, 2012-02-14 In the past five years, the techniques used in arthroscopic shoulder surgery have advanced exponentially. The basic principles are the same, but the theories, techniques, and instrumentation have dramatically improved. *The Cowboy's Companion: A Trail Guide for the Arthroscopic Shoulder Surgeon* is truly a companion book to Burkhart's *View of the Shoulder: A Cowboy's Guide to Advanced Shoulder Arthroscopy*, which builds on the principles of the first book and concentrates on the new theories and techniques that have developed since the first book was written. The book is separated into two sections: *The Shoulder Roundup*, which will be an update on the techniques and ideas that have developed in shoulder surgery and *The Shoulder Rodeo*, which will be a collection of challenging cases that demonstrate unique approaches to difficult shoulder problems. The text comes with two DVDs that feature advanced interactive technology. The surgical videos will be supplemented with state-of-the-art digitally enhanced illustrations and animations, to create an entirely new 3-dimensional learning environment for the surgeon.

*Complications in Surgery* Michael W. Mulholland, Gerard M. Doherty, 2006 This volume offers authoritative, evidence-based recommendations for preventing and managing complications in all current general surgery procedures. The opening sections discuss institutional risk management issues and risks common to all operations, such as wound healing problems, infection, shock, and complications in immunosuppressed patients. Subsequent sections focus on complications of specific procedures in thoracic, vascular, gastric, endocrine, breast, and oncologic surgery, as well as organ transplantation and pediatric surgery. For each procedure, the authors discuss surgical goals,

expected outcomes, preoperative identification of risk factors, intraoperative technique, and postoperative risk. Numerous decision-making algorithms, drawings of techniques, and tables complement the text.
