Illuminating the Path James J. Thomas, 2005 Illuminating the Path is a call to action for researchers and developers to help safeguard our nation by transforming information overload into insights through visual analytics - the science of analytical reasoning facilitated by interactive visual interfaces. Achieving this will require interdisciplinary, collaborative efforts of researchers from throughout academia, industry, and the national laboratories.

Advanced Information Systems Engineering Anne Persson, Janis Stirna, 2004-08-18 The CAiSE 2004 was the 16 in the series of International Conferences on Advanced Information Systems Engineering. In the year 2004 the conference was hosted by the Faculty of Computer Science and Information Technology, Riga Technical University, Latvia. Since the late 1980s, the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering. The conference theme of CAiSE 2004 was Knowledge and Model Driven Information Systems Engineering for Networked Organizations. Modern businesses and IT systems are facing an ever more complex environment characterized by openness, variety, and change. Organizations are becoming less self-sufficient and increasingly dependent on business partners and other actors. These trends call for openness of business as well as IT systems, i.e. the ability to connect and interoperate with other systems. Furthermore, organizations are experiencing ever more variety in their business, in all conceivable dimensions. The different competencies required by the workforce are multiplying. In the same way, the variety in technology is overwhelming with a multitude of languages, platforms, devices, standards, and products. Moreover, organizations need to manage an environment that is constantly changing and where lead times, product life cycles, and partner relationships are shortening. The demand of having to constantly adapt IT to changing technologies and business practices has resulted in the birth of new ideas which may have a profound impact on the information systems engineering practices in future years, such as autonomic computing, component and services marketplaces and dynamically generated software.

Construction Management Daniel W. Halpin, Bolivar A. Senior, Gunnar Lucko, 2017-08-07 It's often said that the construction professional has to be a "jack of all trades, and master of all." This text covers a wide range of subjects, reflecting the breadth of knowledge needed to understand the dynamics of this large and complex industry. This edition includes updated chapters on planning and scheduling, a new chapter addressing linear scheduling methods, material regarding the historical background of construction as a profession, and includes an Instructor Resource of solutions to the end-of-chapter review exercises. This text has become a standard course text at many universities. The first four editions have enjoyed wide success as an introductory treatment of the subjects which are critical to success in the construction industry. This fifth edition preserves the features that have been most appreciated by its users throughout the years, and adds suggestions provided by instructors and students through formal surveys and informal feedback to the authors.

Properties of Polymers D.W. van Krevelen, 2012-12-02 *Properties of Polymers: Their Correlation with Chemical Structure; Their Numerical Estimation and Prediction* from Additive Group Contributions summarizes the latest developments regarding polymers, their properties in relation to chemical structure, and methods for estimating and predicting numerical properties from chemical structure. In particular, it examines polymer electrical properties, magnetic properties, and mechanical properties, as well as their crystallization and environmental behavior and failure. The rheological properties of polymer melts and polymer solutions are also considered. Organized into seven parts encompassing 27 chapters, this book begins with an overview of polymer science and engineering, including the typology of polymers and their properties. It then turns to a discussion of thermophysical properties, from transition temperatures to volumetric and calorimetric properties, along with the cohesive aspects and conformation statistics. It also introduces the reader to the behavior of polymers in electromagnetic and mechanical fields of force. The book covers the quantities that influence the transport of heat, momentum, and matter, particularly heat conductivity, viscosity, and diffusivity; properties that control the chemical stability and breakdown of polymers; and polymer properties as an integral concept, with emphasis on processing and product properties. Readers will find tables that give valuable (numerical) data on polymers and include a survey of the group contributions (increments) of almost every additive function considered. This book is a valuable resource for anyone working on practical problems in the field of polymers, including organic chemists, chemical engineers, polymer processors, polymer technologists, and both graduate and PhD students.

Frontiers of Graphene and Carbon Nanotubes Kazuhiko Matsumoto,2015-03-05 This book focuses on carbon nanotubes and graphene as representatives of nano-carbon materials, and describes the growth of new technology and applications of new devices. As new devices and as new materials, nano-carbon materials are expected to be world pioneers that could not have been realized with conventional semiconductor materials, and as those that extend the limits of conventional semiconductor performance. This book introduces the latest achievements of nano-carbon devices, processes, and technology growth. It is anticipated that these studies will also be pioneers in the development of future research of nano-carbon devices and materials. This book consists of 18 chapters. Chapters 1 to 8 describe new device applications and new growth methods of graphene, and Chapters 9 to 18, those of carbon nanotubes. It is expected that by increasing the advantages and overcoming the weak points of nanocarbon materials, a new world that cannot be achieved with conventional materials will be greatly expanded. We strongly hope this book contributes to its development.

Signaling in Telecommunication Networks John G. van Bosse,1998 The rapid growth of telecommunication in recent years has necessitated the creation of increasingly powerful and complex signaling systems and procedures. Once limited to setting up and releasing plain old telephone service calls, signaling functions now also support a variety of new telecommunication services. To operate effectively in this dynamic industry requires a solid grasp of the different systems and how they work. This book provides accessible, balanced coverage of subscriber signaling, interexchange signaling, signaling between mobile stations and a mobile network, and signaling between exchanges and other network entities. First, it provides a general introduction to telecommunication networks, with a hardware-oriented look at trunks, exchanges, and other basic components. It then introduces signaling concepts gradually, beginning with the older Channel-Associated Signaling (CAS) systems and progressing through today's Common-Channel Signaling (CCS) systems. Specific systems discussed include R2, CCITT No. 5, CCITT No. 6 and its North American counterpart, Common-Channel Interoffice Signaling (CCIS). Signaling System No. 7 (SS7) is treated in detail through a separate examination of its constituent elements-including its message transfer, telephone user, and ISDN user parts. Readers will also find information on U.S. and international requirements, signaling for transactions, and many other important topics.Complete with acronym glossaries and extensive references, Signaling in Telecommunication Networks serves as an excellent introductory text for students as well as a valuable reference for telecommunication engineers and technical managers. Complete single-source coverage of signaling systems, concepts, and development This book offers a thorough, accessible examination of signaling in fixed, mobile, and intelligent telecommunication networks. Providing the reader with a solid grasp of the concepts of channel-associated and common-channel signaling, it is an important basic resource for students approaching the subject for the first time as well as engineers and technical managers seeking up-to-date information on the latest technology. * Examines Bell System Multifrequency, R2, CCITT No. 5, CCITT No. 6, and CCIS signaling systems * Contains in-depth material on Signaling System No. 7-with separate chapters on its message transfer, telephone user, ISDN user, and other parts * Describes signaling on the radio interface between mobile stations and a mobile network * Explores the digital subscriber signaling system DSS1 * Explores applications of transactions in intelligent and mobile networks * Discusses both U.S. and international requirements * Includes references and lists of acronyms * Features hundreds of illustrations highlighting key systems and concepts
