Viruses and Apoptosis Covadonga Alonso,2013-04-18 Using different viral models, molecular pathways regulated by viral genes and their role in the pathogenesis of infection are analyzed. The book also offers an update of known signaling pathways in apoptosis and their role in normal and infected cells. Special emphasis is given to molecular pathways underlying viral transformation and oncogenesis and how research in this area is opening opportunities in cancer therapy.

*Minority Language Writers in the Wake of World War One* Jelle Krol, 2020-08-20 This book presents a comparative literary study of the works of four writers working in European minority languages - Frisian, Welsh, Scots and Breton. The author examines the different strategies employed by the four writers to create distinctive literary fields for their languages in the interwar era when self-determination had been promised to national minorities, finding that each had to make some degree of a step backwards into the past to enable them to make a leap forward. The book also discusses the problems resulting from this oscillation between traditionalism and modernism, drawing on concepts such as Pascale Casanova's 'littératures combatives' to make sense of these minority languages and communities within the wider European context. This study will be of interest to students and scholars of minority languages - particularly the four explored here - as well as twentieth-century and comparative literature, multilingualism, and language policy.

*Therapeutic Potentials of Curcumin for Alzheimer Disease* Akhlaq A Farooqui,2016-03-05 This is the first book on the market that explores the importance of curcumin for the treatment of neurological disorders. It has been estimated that 35.6 million people globally had dementia in 2010 and the prevalence of dementia has been predicted to double every 20 years. Thus, 115.4 million people may be living with dementia in 2050. Alzheimer's disease (AD) is the leading cause of dementia and is present in 60%–70% of people with dementia. Unless new discoveries are made in the prevention or treatment of AD, the number of cases in the US alone is estimated to increase threefold, to 13.2 million by the year 2050. Thus, it is important to focus on delaying and treating the onset of AD by curcumin may be an important step for controlling AD. Regular consumption of healthy diet containing

curcumin enriched foods, moderate exercise, and regular sleep may produce beneficial effects not only on motor and cognitive functions, but also on memory deficits that occur to some extent during normal aging and to a large extent in AD. Delaying the onset and progression of AD and improving its symptoms by few years with regular consumption of curcumin may relieve some of the burden on health care systems. In service of this goal, this volume gives readers a comprehensive and cutting edge description of the importance of curcumin for the treatment of AD in cell culture and animal models in a manner that is useful not only to students and teachers but also to researchers, dietitians, nutritionists and physicians. It can be used as supplement text for a range of neuroscience and nutrition courses. Clinicians, neuroscientists, neurologists and pharmacologists will find this book useful for understanding molecular aspects of AD treatment by curcumin.

Comprehensive Biomaterials Paul Ducheyne, Kevin Healy, Dietmar W. Hutmacher, David W. Grainger, C. James Kirkpatrick, 2015-08-28 Comprehensive Biomaterials brings together the myriad facets of biomaterials into one, major series of six edited volumes that would cover the field of

biomaterials in a major, extensive fashion: Volume 1: Metallic, Ceramic and Polymeric Biomaterials  
Volume 2: Biologically Inspired and Biomolecular Materials Volume 3: Methods of Analysis Volume 4:  
Biocompatibility, Surface Engineering, and Delivery Of Drugs, Genes and Other Molecules Volume 5:  
Tissue and Organ Engineering Volume 6: Biomaterials and Clinical Use Experts from around the world  
in hundreds of related biomaterials areas have contributed to this publication, resulting in a continuum  
of rich information appropriate for many audiences. The work addresses the current status of nearly all  
biomaterials in the field, their strengths and weaknesses, their future prospects, appropriate analytical  
methods and testing, device applications and performance, emerging candidate materials as  
competitors and disruptive technologies, and strategic insights for those entering and operational in  
diverse biomaterials applications, research and development, regulatory management, and commercial  
aspects. From the outset, the goal was to review materials in the context of medical devices and tissue  
properties, biocompatibility and surface analysis, tissue engineering and controlled release. It was also  
the intent both, to focus on material properties from the perspectives of therapeutic and diagnostic use,

and to address questions relevant to state-of-the-art research endeavors. Reviews the current status of nearly all biomaterials in the field by analyzing their strengths and weaknesses, performance as well as future prospects Presents appropriate analytical methods and testing procedures in addition to potential device applications Provides strategic insights for those working on diverse application areas such as R&D, regulatory management, and commercial development

Transcriptional Regulation in Cancers and Metabolic Diseases Wen Zhou,Carol Prives,2015-12-04

The transcription factor (TF) mediated regulation of gene expression is a process fundamental to all biological and physiological processes. Genetic changes and epigenetic modifications of TFs affect target gene expression during the formation of malignant cells. Extensive work has been done on the critical TFs in various disease models. Despite the success of numerous TF-targeted therapies, there remain significant hurdles understanding the mechanisms, transcriptional targets and networks of

physiologic pathways that govern TF action. This effort is now beginning to produce exciting new avenues of research. A clinically relevant topic for genetic change of TF is the mutant isoforms of p53, the most famous tumor suppressor. The p53 mutations either results in loss of function, or acting as dominant negative for wild-type protein, or ‘gain of function’ specifically promoting cancer survival. The gain of function is achieved by shifting p53 binding partner proteins, or changed genomic binding landscape leading to a cancer-promoting transcriptome. Another example of genetic change of TF causing malignancy is the AML-ETO fusion protein in the human t(8;21)-leukemia. The fusion protein is an active TF, and more interestingly, new studies link the disease causing role of AML-ETO to the unique transcriptome in the hematopoietic stem cells. Nuclear receptors (NR) are a group of ligand-dependent TFs governing the expression of genes involved in a broad range of reproductive, developmental and metabolic programs. Genetic changes and epigenetic modifications of NRs lead to cancers and metabolic diseases. Androgen receptor (AR), estrogen receptor (ER) and progesterone receptor (PR) are well studied NRs in prostate, breast and endometrial cancers. The development in

sequencing technology and computational genomics enable us to investigate the transcription programs of these master TFs in an unprecedented level. This Research Topic aims to present the most up-to-date progress in the field of transcription regulation in cancers and metabolic diseases.

**Metabolic Adaptation to Cell Growth and Proliferation in Normal and Pathological Conditions** Lluís Fajás, Albert Giralt, 2018-04-27 Proliferating cells must adapt their metabolism to fulfill the increased requirements for energy demands and biosynthetic intermediates. This adaptation is particularly relevant in cancer, where sustained rapid proliferation combined with the harsh conditions of the tumor microenvironment represent a major metabolic challenge. Noteworthy, metabolic reprogramming is now

considered one of the hallmarks of cancer. However, the one size fits all rarely applies to the metabolic rewiring occurring in cancer cells, which ultimately depends on the combination of several factors such as the tumor's origin, the specific genetic alterations and the surrounding microenvironment. In the present Research Topic, we compile a series of articles that discuss different metabolic adaptations that proliferating cells undergo to sustain growth and division, as well as the potential therapeutic window to treat certain pathologies, with a special focus on cancer.
