Charles Leocha

Ski Snowboard Europe Charles Leocha,2003-10 Ski Europe takes skiers step by step through planning the winter vacation of their dreams in the Alps in Austria, Italy, Switzerland or France as well as some resorts in Spain and Andorra. Just like here in the United States or Canada, every European resort has its quirks and specialties, notes Leocha. Seasoned skiers know that some resorts are better for singles, others better for families. Some offer cozy chalets, others feature modern hotels right on the slopes. And while one resort may be heaven for beginning skiers it may be boring for the expert. Ski Europe organizes all the necessary information to make intelligent choices and provides the phone numbers to make reservations and plans. Over more than a decade Ski Europe has become known for its no-holds-barred, brutally honest reports on reality at ski resorts. Ski Europe takes no advertising, has no axe to grind, and, like Ski America and Canada, is written by Leocha together with an international team of prize-winning ski and snowboard journalists.

The Friendly Orange Glow Brian Dear,2018-10-02 At a time when Steve Jobs was only a teenager and Mark Zuckerberg wasn't even born, a group of visionary engineers and designers—some of them only high school students—in the late 1960s and 1970s created a computer system called PLATO, which was light-years ahead in experimenting with how people would learn, engage, communicate, and play through connected computers. Not only did PLATO engineers make significant hardware breakthroughs with plasma displays and touch screens but PLATO programmers also came up with a long list of software innovations: chat rooms, instant messaging, message boards, screen savers, multiplayer games, online newspapers, interactive fiction, and emoticons. Together, the PLATO community pioneered what we now collectively engage in as cyberculture. They were among the first to identify and also realize the potential and scope of the social interconnectivity of computers, well before the creation of the internet. PLATO was the foundational model for every online community that was to follow in its footsteps. The Friendly Orange Glow is the first history to recount in fascinating detail the remarkable accomplishments and inspiring personal stories of the PLATO community. The addictive nature of PLATO both ruined many a college career and launched pathbreaking multimillion-dollar software products. Its development, impact, and eventual disappearance provides an instructive case study of technological innovation and disruption, project management, and missed opportunities. Above all, The Friendly Orange Glow at last reveals new perspectives on the origins of social computing and our internet-infatuated world.

With this book, Raymond shares his knowledge, experience, and anecdotal stories, allowing all of us to get a better understanding of the operating system that affects millions of people every day. This book has something for everyone, is a casual read, and I highly recommend it! --Jeffrey Richter, Author/Consultant, Cofounder of Wintellect Very interesting read. Raymond tells the inside story of why Windows is the way it is. --Eric Gunnerson, Program Manager, Microsoft Corporation Absolutely essential reading for understanding the history of Windows, its intricacies and quirks, and why they came about. --Matt Pietrek, MSDN Magazine's Under the Hood Columnist Raymond Chen has become something of a legend in the software industry, and in this book you'll discover why. From his high-level reminiscences on the design of the Windows Start button to his low-level discussions of GlobalAlloc that only your inner-geek could love, The Old New Thing is a captivating collection of anecdotes that will help you to truly appreciate the difficulty inherent in designing and writing quality software. --Stephen Toub, Technical Editor, MSDN Magazine Why does Windows work the way it does? Why is Shut Down on the Start menu? (And why is there a Start button, anyway?) How can I tap into the dialog loop? Why does the GetWindowText function behave so strangely? Why are registry files called hives? Many of Windows' quirks have perfectly logical explanations, rooted in history. Understand them, and you'll be more productive and a lot less frustrated. Raymond Chen--who's spent more than a decade on Microsoft's Windows development team--reveals the hidden Windows you need to know. Chen's engaging style, deep insight, and thoughtful humor have made him one of the world's premier technology bloggers. Here he brings together behind-the-scenes explanations, invaluable technical advice, and illuminating anecdotes that bring Windows to life--and help you make the most of it. A few of the things you'll find inside: What vending machines can teach you about effective user interfaces A deeper understanding of window and dialog management Why performance optimization can be so counterintuitive A peek at the underbelly of COM objects and the Visual C++ compiler Key details about backwards compatibility--what Windows does and why Windows program security holes most developers don't know about How to make your program a better Windows citizen

Coders at Work Peter Seibel,2009-12-21 Peter Seibel interviews 15 of the most interesting computer programmers alive today in Coders at Work, offering a companion volume to Apress's highly acclaimed best-seller Founders at Work by Jessica Livingston. As the words "at work" suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming, while revealing much more, like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the Coders at Work web site: www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen: Pioneer in optimizing compilers, first woman to win the Turing Award (2006) and first female IBM fellow Joe Armstrong: Inventor of Erlang Joshua Bloch: Author of the Java collections framework, now at Google Bernie Cosell: One of the main software guys behind the original ARPANET IMPs and a master debugger Douglas Crockford: JSON founder, JavaScript architect at Yahoo! A Casual Revolution Jesper Juul,2012-02-10 How casual games like Guitar Hero, Bejeweled, and those for Nintendo Wii are expanding the audience for video games. We used to think that video games were mostly for young men, but with the success of the Nintendo Wii, and the proliferation of games in browsers, cell phone games, and social games video games changed fundamentally in the years from 2000 to 2010. These new casual games are now played by men and women, young and old. Players need not possess an intimate knowledge of video game history or devote weeks or months to play. At the same time, many players of casual games show a dedication and skill that is anything but casual. In A Casual Revolution, Jesper Juul describes this as a reinvention of video games, and of our image of video game players, and explores what this tells us about the players, the games, and their interaction. With this reinvention of video games, the game industry reconnects with a general audience. Many of today's casual game players once enjoyed Pac-Man, Tetris, and other early games, only to drop out when video games became more time-consuming and complex. Juul shows that it is only by understanding what a game requires of players, what players bring to a game, how the game

industry works, and how video games have developed historically that we can understand what makes video games fun and why we choose to play (or not to play) them. Important Notice: The digital edition of this book is missing some of the images found in the physical edition.
