The History of Professional Hockey in Victoria Helen Edwards,2019-06-04 The History of Profesional Hockey in Victoria is an in-depth examination of professional hockey in Victoria. It includes details on the different leagues, statistics on every game played by a Victoria team, and information on every player to dress for at least one regular season game. From the Patrick family to RG Properties, this book covers the ownership of teams and records the highlights and low points of every team. It was produced as a thank-you to the players who entertained Victorians over a century, giving us reason to cheer on many occasions and to be disappointed as well. Victoria enjoyed three championships, including the Stanley Cup victory in 1925. Little did the Cougars know that they would go down in history as the last non-NHL team to win the Stanley Cup, and the last non-NHL team to play in a Stanley Cup series. They were also the last West Coast team to win the Stanley Cup until Anaheim did it in 2007. The 1950-51 Cougars, led by their kid line of Andy Hebenton, Bob Frampton, and Reg Abbott, won the league title while the Maple Leafs (with Hebenton in the lineup) won the Lester Patrick Cup in the1965-1966 season. Included in the narrative is the story of the construction and operation of the different venues in which games were played. The politics behind arena construction are examined as well, with editorial cartoons to make the reader laugh about the folly of some ideas. Biographies of selected players tell the story of individuals and how they came to play hockey in Victoria. Learn from behind-the-scenes stories told by the players themselves. Lavishly illustrated, this is a book for those who love hockey history and its connection to Victoria, BC.

The Army's Future Combat Systems Program and Alternatives ,2006 In today's environment of rapidly evolving conflicts, the Army's goal is to have units that have the combat power of heavy units but that can be transported anywhere in the world in a matter of days. To address concerns about the armored vehicle fleet's aging and the difficulties involved in transporting it as well as to equip the Army more suitably to conduct operations overseas on short notice using forces based in the United States the service created the Future Combat Systems (FCS) program in 2000. A major modernization effort, the program is designed in part to develop and purchase vehicles to replace those now in the heavy forces; the new vehicles would be much lighter, thereby easing the deployment of units equipped with them. In the analysis presented in this report, the Congressional Budget Office (CBO) examined the current status of the Army's fleet of armored vehicles and assessed the speed of deployment of the service's heavy forces. It also evaluated the FCS program, considering the program's costs as well as its advantages and disadvantages and comparing it with several alternative plans for modernizing the Army's heavy forces.

The Unattainable Attempt to Avoid the Casus Irreducibilis for Cubic Equations Sara Confalonieri,2015-03-18 Sara Confalonieri presents an overview of Cardano's mathematical treatises and, in particular, discusses the writings that deal with cubic equations. The author gives an insight into the latest of Cardano's algebraic works, the De Regula Aliza (1570), which displays the attempts to overcome the difficulties entailed by the casus irreducibilis. Notably some of Cardano's strategies in this treatise are thoroughly analyzed. Far from offering an ultimate account of De Regula Aliza, by one of the most outstanding scholars of the 16th century, the present work is a first step towards a better understanding.

Factoring Groups into Subsets Sandor Szabo,Arthur D. Sands,2009-01-21 Decomposing an abelian group into a direct sum of its subsets leads to results that can be applied to a variety of areas, such as number theory, geometry of tilings, coding theory, cryptography, graph theory, and Fourier analysis. Focusing mainly on cyclic groups, Factoring Groups into Subsets explores the factorization theory of abelian groups. The book first shows how to construct new factorizations from old ones. The authors then discuss nonperiodic and periodic factorizations, quasiperiodicity, and the factoring of periodic subsets. They also examine how tiling plays an important role in number theory. The next several chapters cover factorizations of infinite abelian groups; combinatorics, such as Ramsey numbers, Latin squares, and complex Hadamard matrices; and connections with codes, including variable length codes, error correcting codes, and integer codes. The final chapter deals with several classical problems of Fuchs. Encompassing many of the main areas of the factorization theory, this book explores problems in which the underlying factored group is cyclic.
