Joe Cinque's Consolation Helen Garner, 2007-11-10 NOW A MAJOR MOTION PICTURE A true story of death, grief and the law from the 2019 winner of the Australia Council Award for Lifetime Achievement in Literature. In October 1997 a clever young law student at ANU made a bizarre plan to murder her devoted boyfriend after a dinner party at their house. Some of the dinner guests-most of them university students-had heard rumours of the plan. Nobody warned Joe Cinque. He died one Sunday, in his own bed, of a massive dose of rohypnol and heroin. His girlfriend and her best friend were charged with murder. Helen Garner followed the trials in the ACT Supreme Court. Compassionate but unflinching, this is a book about how and why Joe Cinque died. It probes the gap between ethics and the law; examines the helplessness of the courts in the face of what we think of as 'evil'; and explores conscience, culpability, and the battered ideal of duty of care. It is a masterwork from one of Australia's greatest writers. Winner of the Ned Kelly Award for Best True Crime 2005 Winner of the ABIA Book of the Year 2004 PRAISE FOR JOE CINQUE'S CONSOLATION Garner's book is a writer's profound response to a tragedy and to questions about human responsibility over time as well as at precise moments The Age This is a work of great passion and of countervailing humanity - a book of witness... Edible Insects Arnold van Huis, Food and Agriculture Organization of the United Nations, 2013 Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use of insects for food security. And it presents case studies and examples from around the world. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will

stimulate debate on the expansion of the use of insects as food and feed.
