American Architect and the Architectural Review ,1892

The Abacus Jesse Dilson,2013-07-30 The abacus is as useful and efficient a machine today as it was when it was first created centuries ago. Whether you're an expert in the latest computer technology or you're mastering arithmetic and word problems for the first time, it won't take long to learn the basics (and even the not-so-basics) of adding, subtracting, multiplying, and dividing on this ingenious and fun-to-use mathematical tool.

The entries consist of fully updated articles together with hundreds of entirely new topics. This unique reference work includes intercultural articles on broad topics such as mathematics and astronomy as well as thoughtful philosophical articles on concepts and ideas related to the study of non-Western Science, such as rationality, objectivity, and method. You'll also find material on religion and science, East and West, and magic and science.

The Abacus: Its History, Its Design, Its Possibilities in the Modern World Parry Hiram Moon,1971

Classical Marble: Geochemistry, Technology, Trade N. Herz,Marc Waelkens,2013-04-17 Marble in Ancient Greece and Rome: Geology, Quarries, Commerce, Artifacts Marble remains the sine qua non raw material of the ancient Greeks and Romans. Beginning in the Bronze Age sculpture began in marble and throughout classical times the most important statues, reliefs, monuments and inscriptions were made of it. Yet, quarry sources changed in time as preferences for different marbles were influenced by local traditions, the possibilities of transport, esthetic tastes, and economics. Marble studies and the identification of the provenance of marble can thus reveal much about Greek and Roman history, trade, aesthetics and technology. Persons in many disciplines are studying various aspects of Greek and Roman marble usage. Geologists and geochemists are working on methods to determine the provenance of marble; archaeologists are noting changing patterns of import and use in excavation~ and discovering how improving quarrying techniques and preliminary dressing of the extracted material influenced the final shape of artifacts; ancient historians are now understanding quarry organization and bureaucracies that controlled marble production and trade; art historians are seeing how physical characteristics of the stone affected the techniques and style of sculpture; architects and engineers are interested in quarry technologies and usage in building construction. These specialists drawn from many disciplines rarely have an opportunity to compare notes and see how each can contribute to the research effort of others.

The Rotation of Sun and Stars Jean-Pierre Rozelot, 2009-01-08 The Sun and stars rotate in different ways and at different velocity rates. The knowledge of how they rotate is important in understanding the formation and evolution of stars and their structure. The closest star to our Earth, the Sun, is a good laboratory to study in detail the rotation of a G star and allows to test new ideas and develop new techniques to study stellar rotation. More or less massive, more or less evolved objects, however, can have a very different rotation rate, structure and history. In recent years our understanding of the rotation of the Sun has greatly improved. The Sun has a well-known large-scale rotation, which can be measured thanks to visible features across the solar disk, such as sunspots, or via spectroscopy. In addition, several studies cast light on differential rotation in the convective zone and on meridional circulation in the radiative zone of the Sun. Even the rotation of the core of the Sun can now be studied thanks to various methods, such as dynamics of the gravitational moments and of course, helioseismology, through g-modes analysis. Moreover, the magnetic field is strongly linked to the matter motions in the solar plasma. The solar magnetic field can be measured only at the surface or in the upper layers. It is the product of the internal dynamo or of the local dynamos if they exist - in any case magnetic field and rotation cannot thus be separated.

Egyptian Cultural Identity in the Architecture of Roman Egypt (30 BC-AD 325) Youssri Ezzat Hussein Abdelwahed, 2015-02-06 This volume considers the relationship between architectural form and different layers of identity assertion in Roman Egypt. It stresses the sophistication of the concept of identity, and the complex yet close association between architecture and identity.

Computations and Computing Devices in Mathematics Education Before the Advent of Electronic Calculators Alexei Volkov, Viktor Freiman, 2019-01-11 This volume traces back the history of interaction between the "computational" or "algorithmic" aspects of elementary mathematics and mathematics education throughout ages. More specifically, the examples of mathematical practices analyzed by the historians of mathematics and mathematics education who authored the chapters in the present collection show that the development (and, in some cases, decline) of counting devices and related computational practices needs to be considered within a

particular context to which they arguably belonged, namely, the context of mathematics instruction; in their contributions the authors also explore the role that the instruments played in formation of didactical approaches in various mathematical traditions, stretching from Ancient Mesopotamia to the 20th century Europe and North America.
