Engineering Applications of Neural Networks Dominic Palmer-Brown, Chrisina Draganova, Elias Pimenidis, Haris Mouratidis, 2009-08-19 A cursory glance at the table of contents of EANN 2009 reveals the amazing range of neural network and related applications. A random but revealing sample includes: reducing urban concentration, entropy topography in epileptic electroencephalography, phytoplanktonic species recognition, revealing the structure of childhood abdominal pain data, robot control, discriminating angry and happy facial expressions, food forecasting, and assessing credit worthiness. The diverse nature of applications demonstrates the vitality of neural computing and related soft computing approaches, and their relevance to many key contemporary technological challenges. It also illustrates the value of EANN in bringing together a broad spectrum of delegates from across the world to learn from each other's related methods. Variations and extensions of many methods are well represented in the proceedings, ranging from support vector machines, fuzzy reasoning, and Bayesian methods to snap-drift and spiking neurons. This year EANN accepted approximately 40% of submitted papers for full-length presentation at the conference. All members of the Program Committee were asked to participate in the reviewing process. The standard of submissions was high, according to the reviewers, who did an excellent job. The Program and Organizing Committees thank them. Approximately 20% of submitted papers will be chosen, the best according to the reviews, to be extended and reviewed again for inclusion in a special issue of the journal Neural Computing and Applications. We hope that these proceedings will help to stimulate further research and development of new applications and modes of neural computing.

Clinical Algorithms in General Surgery Salvatore Docimo Jr., Eric M. Pauli, 2019-02-04 As the field of general

surgery continues to expand, the diagnostic and therapeutic pathways are becoming more complex. The diagnostic modalities available to the clinician can be both very helpful but also overwhelming considering the findings can often determine the scope of treatment for a patient. This text will take the major pathologies of the systems commonly studied in general surgery and present them in a unique format based upon algorithms. The algorithms will begin with the clinical presentation of the patient, work its way through the various diagnostic modalities available to the surgeon, and finally allow the physician to make a decision regarding treatment options based upon various patterns in the algorithms. This text will become a very useful resources for surgeons as it allows complex clinical pathways to be conveniently organized in logical algorithms. It will become a concise yet comprehensive manual to assist in clinical decision making. All algorithms will be reviewed by experts in their field and include the most up-to-date clinical and evidence-based information. Clinical Algorithms in General Surgery provides a useful resource for surgeons in clinical practice as well as surgical residents, and surgical attendings who are preparing for board examinations.
