Tobakkonacht -- The Antismoking Endgame Michael J. McFadden, 2013-10-01

TobakkoNacht -- The Antismoking Endgame, is a frontal attack on the misuse of science and language to promote unjustified levels of smoking bans and taxes. The author, trained in statistics and propaganda analysis at Pennsylvania's Wharton School, dissects the scary antismoking studies that have made headlines over the past ten years. He shows clearly in each case how the data and language have been juggled to reach and promote the conclusions of those handing out the grant money and backs up his arguments with solid science clearly explained at a level that will satisfy both laymen and professionals. The book isn't all business though. It opens with a dystopian future tale of an Endgame in which the antismoking movement has gained full power and smokers are generally treated as near-criminals. The author explores the roots that could bring such a fiction into being and looks at the world that could be created... a very sad world indeed. The pseudo science used to push goals like outdoor smoking bans is also attacked with satire and with short essays taking the form of Letters To The Editor focusing on all the microarguments used by antismoking crusaders playing with their scientific instruments and by fanatic who'd happily apply the same methodology to reducing automobile and alcohol use. A few more formal communications showing how to approach local and national governmental bodies are also offered, again with the benefit of exposing false arguments while showing how to effectively attack the authoritative sources that seek to silence the opposition with their prestige while pushing for ever wider bans and ever

higher taxes. The book concludes with a strong section painting a path toward a winning endgame for those in the Free Choice movement, pointing to the weaknesses of the current crop of smoking prohibitionists and suggesting how they can best be countered. *TobakkoNacht* can best be summed up like this: It shows how the denormalization of smokers has warped science and ripped holes in our social fabric while transforming a worthy public health effort into a destructive social force assaulting our lives, our families, and our communities -- and it shows how to fight back!

*Dissecting Antismokers' Brains* Michael J. McFadden, 2004-05 The true horror of 1984 is not what was done to Winston Smith. The true horror was that the vast majority of the populace was happy, content, and believed that what their government was doing was right. That quote introduces what Britain's Numberwatch has called, the most astonishing political saga since the rise of Adolph Hitler. *Dissecting Antismokers' Brains* examines the psychology and motivations that drive antismoking advocates while also analyzing their general abuse of language and science. The combination offers readers a solid foundation for understanding modern efforts to ban, tax, and harass smokers into nonexistence. Published in 2004, *Brains* remains ahead of its time with a startling freshness in its ideas and theories. The propaganda methods exposed here in their early development have grown and are being used even more intensively in the ads, press releases, and guidebooks of antismoking advocacy groups today. The modern stonewalling techniques examined in the

author's follow-up volume, *TobakkoNacht - The Antismoking Endgame* are shown in their birthing forms in his early communications with advocates and the callous abuse of our love for children continues to be exploited as ads show evil wisps of smoke seeking out open windows to attack babies in their nurseries. McFadden's warnings of future campaigns to deny jobs and medical care to smokers, to extend smoking bans to apartments and outdoor spaces, and to apply similar conditioning/nudging techniques to the control of alcohol and fast foods have proven far too true. For those seeking an in-depth but comfortably readable examination of the foundations of the antismoking movement, this book is essential. Its focus on the combination of psychology, propaganda analysis, and the misuse of science makes it a solid volume for college courses in the areas of social change, scientific ethics, political manipulation, and the use and limits of governmental control over citizen behavior. At the same time, its meticulous deconstruction of the basic scientific and statistical arguments fueling government-imposed smoking bans makes it accessible to anyone who's ever wondered how smoking has moved to being regularly presented as both an antisocial and even immoral character trait. *Dissecting Antismokers' Brains* remains an indispensable volume for anyone disturbed by, wishing to understand, or wanting to fight the growth of governmental control over personal life choices and behaviors.

*Food Safety Culture* Frank Yiannas, 2008-12-10 Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the

human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

A Grammar of Karbi Linda Konnerth, 2020-06-08 This is a comprehensive grammar of the Hills Karbi variety spoken predominantly in the Karbi Anglong districts. Karbi belongs to the Trans-Himalayan (Tibeto-Burman) family but its exact phylogenetic status has remained unclear. By providing a diachronically-oriented functional analysis of all structural levels of Karbi, this grammar offers a reference work that provides a thorough account of this language. The data in this grammar come from fieldwork that was primarily carried out in the district capital of Diphu although the corpus includes recordings of speakers from all over the two Karbi Anglong

districts. This corpus is freely available both as fully glossed text in Himalayan Linguistics (Konnerth and Tisso 2018) and as original media files in ELAR (SOAS University of London). Now also including a glossary, this grammar is a thoroughly revised version of the 2014 dissertation of the author, which won the 2015 Pāṇini Award of the Association for Linguistic Typology (ALT). In this revised version, a few new sections have been added and numerous other sections have been thoroughly updated.

**Chemical and Technological Characterization of Dairy Products** Michele Faccia, 2021 Milk processing is one of the most ancient food technologies, dating back to around 6000 B.C. A huge number of milk products have been developed worldwide, representing a spectacular example of biodiversity and a priceless cultural heritage. After millennia of unanimous appreciation as a pillar of human nutrition, a series of questions about the desirability of their wide consumption have been raised. In the light of the growing threat deriving mostly from the spread of veganism and health consciousness,

improving milk processing safety and dairy nutritional characteristics, as well as deepening their functional characteristics, are of a primary exigency. This Special Issue contains several articles focusing on this hot topic, all of which add knowledge to the field and supply interesting ideas for developing new products and processes.

Unequal Lives Nicholas A. Bainton, Debra McDougall, Kalissa Alexeyeff, John Cox, 2021-01-18. As we move further into the twenty-first century, we are witnessing both the global extensification and local intensification of inequality. *Unequal Lives* deals with the particular dilemmas of inequality in the Western Pacific. The authors focus on four dimensions of inequality: the familiar triad of gender, race and class, and the often-neglected dimension of generation. Grounded in meticulous long-term ethnographic enquiry and deep awareness of the historical contingency of these configurations of inequality, this volume illustrates the multidimensional, multiscale and epistemic nature of contemporary inequality. This collection is a major contribution to academic and political debates about the perverse effects of inequality, which now ranks among the greatest challenges of our time. The inspiration for this volume derives from the breadth and depth of Martha Macintyre's remarkable scholarship. The contributors celebrate Macintyre's groundbreaking work, which exemplifies the explanatory power, ethical force and pragmatism that ensures the relevance of anthropological research to the lives of others and to understanding the global condition. 'Unequal Lives' is an impressive collection by Melanesianist anthropologists with reputations for theoretical sophistication, ethnographic imagination and persuasive

writing. It brilliantly illuminates all aspects of the multifaceted scholarship of Martha Macintyre, whose life and teaching are also highlighted in the commentaries, tributes and interview included in the volume.’ – Robert J. Foster, Professor of Anthropology and Visual and Cultural Studies, Richard L. Turner Professor of Humanities, University of Rochester ‘Inspired by Martha Macintyre’s work, the contributors to Unequal Lives show that to theorise inequality is a measured project, one that requires rescaling its exercise over several decades in order to recognise the reality of inequality as it is known in social relations and to document it critically, unravelling their own readiness to misjudge what they see from the lives that are lived by the people with whom they have lived and studied. This fine volume shows how the ordinariness of everyday work and care can be a chimera wherein the apparent reality of inequality might mislead less critical reports to obscure its very account. From reading it, we learn that such unrelenting questioning of what makes lives unequal becomes the very analytic for better understanding lives as they are lived.’ – Karen M. Sykes, Professor of Anthropology, University of Manchester

*Prohibition, Religious Freedom, and Human Rights: Regulating Traditional Drug Use* Beatriz Caiuby Labate, Clancy Cavnar, 2014-03-25 This book addresses the use and regulation of traditional drugs such as peyote, ayahuasca, coca leaf, cannabis, khat and Salvia divinorum. The uses of these substances can

often be found at the intersection of diverse areas of life, including politics, medicine, shamanism, religion, aesthetics, knowledge transmission, socialization, and celebration. The collection analyzes how some of these psychoactive plants have been progressively incorporated and regulated in developed Western societies by both national legislation and by the United Nations Drug Conventions. It focuses mainly, but not only, on the debates in court cases around the world involving the claim of religious use and the legal definitions of “religion.” It further touches upon issues of human rights and cognitive liberty as they relate to the consumption of drugs. While this collection emphasizes certain uses of psychoactive substances in different cultures and historical periods, it is also useful for thinking about the consumption of drugs in general in contemporary societies. The cultural and informal controls discussed here represent alternatives to the current merely prohibitionist policies, which are linked to the spread of illicit and violent markets. By addressing the disputes involved in the regulation of traditional drug use, this volume reflects on notions such as origin, place, authenticity, and tradition, thereby relating drug policy to broader social science debates.
