**Absolute Recall** Lori Flynn,2015-12-08 **ABSOLUTE RECALL** is about consequence. As a result of his dealings with the notorious Jovanni crime family, accountant Spencer Martin is about to be murdered. The young and newly widowed Reagan Martin is a quick-witted nurse blessed, or cursed, with an eidetic memory. She has inadvertently browsed through her now dead husband's ledger that depicts his calculated shelter of the mob's bounty, systematically scattered throughout four states and a dozen locations. Its deadly contents have been forever implanted in her mind. She now finds herself in mortal danger as the same ruthless people who murdered her husband want her silenced! When the program designed to protect her is compromised, she is forced on the run, hunted by relentless killers. Alone on a perilous journey, she assumes fraudulent identities to survive. The mob wants their money; she wants to live. Her lone ally, the brooding and protective Special Agent Hudson Garvey, is powerless to deny the sizzling connection between them. He dedicates his time and resources to find her, track the evil trailing her, and save her life—before it's too late.

*Absolute Recall* Lori Flynn,2015-12-04 As a result of his dealings with the notorious Jovanni crime family, accountant Spencer Martin has been murdered. His widow, the young, quick-witted nurse, Reagan, is next on the hit list because she has discovered the whereabouts of the mob's money that her deceased husband was hiding. She is now on the run for survival assuming fraudulent identities along the way. Her lone ally is the very handsome Special Agent Hudson Garvey who is hot on the trail of the evil pursuing her. Can he catch them and save her before it's too late?

The 23 revised full papers and 24 revised poster papers were carefully reviewed and selected from more than 130 submissions. The papers are organized in topical sections that include material on media understanding, creative media, visual content representation, and video codecs, as well as media retrieval, audio and music.

*The Recall* Joseph F. Zimmerman,2014-01-01 In-depth study of the recall, the most important popular device allowing voters to remove unresponsive elected officials from office. The recall, or  election in reverse, is meant to allow voters to remove an elected official from office prior to the completion of his/her term in office. In this revised second edition of *The Recall*, Joseph F. Zimmerman examines the rise of the recall in the United States and its use by American voters. Proponents of the recall believe the threat of removal from office would ensure that elected officials would act in accord with the public s will, while opponents fear their use would disrupt and inhibit public officers in the performance of their duties. Zimmerman provides a detailed analysis of how the recall has functioned in practice and discovers that the recall has seldom been employed against elected state officials. Although used more often against local

government officials, the rate is still not exceptionally high when one considers the extremely large number of elected officials. After a century of use in the United States, the recall has not produced a new era of public official responsibility as hoped for by proponents, but neither has it caused extensive disruption of state and local governments, the original concern of early opponents.

*Neuro-Symbolic Artificial Intelligence: The State of the Art* P. Hitzler, 2022-01-19 Neuro-symbolic AI is an emerging subfield of Artificial Intelligence that brings together two hitherto distinct approaches. "Neuro" refers to the artificial neural networks prominent in machine learning, "symbolic" refers to

algorithmic processing on the level of meaningful symbols, prominent in knowledge representation. In the past, these two fields of AI have been largely separate, with very little crossover, but the so-called “third wave” of AI is now bringing them together. This book, *Neuro-Symbolic Artificial Intelligence: The State of the Art*, provides an overview of this development in AI. The two approaches differ significantly in terms of their strengths and weaknesses and, from a cognitive-science perspective, there is a question as to how a neural system can perform symbol manipulation, and how the representational differences between these two approaches can be bridged. The book presents 17 overview papers, all by authors who have made significant contributions in the past few years and starting with a historic overview first seen in 2016. With just seven months elapsed from invitation to authors to final copy, the book is as up-to-date as a published overview of this subject can be. Based on the editors’ own desire to understand the current state of the art, this book reflects the breadth and depth of the latest developments in neuro-symbolic AI, and will be of interest to students, researchers, and all those working in the field of Artificial Intelligence.

The Black Swan Elie Ayache,2010-05-05 Elie Ayache is the only person to present arguments about The Black Swan and rare events that I had not thought about. He does what philosophical inquiry has always done: to go the extra mile and look at the world in a deeply philosophical way. Nassim Nicholas Taleb, PhD, author of *The Black Swan*, Distinguished Professor, New York University Polytechnic Institute & Principal, Universa Investments. Elie Ayache has uniquely straddled the down-to-earth world

of money and complex financial derivatives and the abstract world of the mind and philosophy. Insightful and insane in equal measures, this book is not an easy read. I wouldn't recommend this for holiday reading on the beach but perhaps for while sitting in front of a log fire with a large Scotch, or probably several.???

Paul Wilmott, author of *Frequently Asked Questions in Quantitative Finance* October 19th 1987 was a day of huge change for the global finance industry. On this day the stock market crashed, the Nobel Prize winning Black-Scholes formula failed and volatility smiles were born, and on this day Elie Ayache began his career, on the trading floor of the French Futures and Options Exchange. Experts everywhere sought to find a model for this event, and ways to simulate it in order to avoid a recurrence in the future, but the one thing that struck Elie that day was the belief that what actually happened on 19th October 1987 is simply non reproducible outside 19th October 1987 - you cannot reduce it to a chain of causes and effects, or even to a random generator, that can then be reproduced or represented in a theoretical framework. The *Blank Swan* is Elie's highly original treatise on the financial markets – presenting a totally revolutionary rethinking of derivative pricing and technology. It is not a diatribe against Nassim Taleb's *The Black Swan*, but criticises the whole background or framework of predictable and unpredictable events – white and black swans alike – , i.e. the very category of prediction. In this revolutionary book, Elie redefines the components of the technology needed to price and trade derivatives. Most importantly, and drawing on a long tradition of philosophy of the event from Henri Bergson to Gilles Deleuze, to Alain Badiou, and on a recent brand of philosophy of contingency, embodied by the speculative materialism of Quentin Meillassoux, Elie redefines the market itself against the common perceptions of orthodox financial theory,

general equilibrium theory and the sociology of finance. This book will change the way that we think about derivatives and approach the market. If anything, derivatives should be renamed contingent claims, where contingency is now absolute and no longer derivative, and the market is just its medium. The book also establishes the missing link between quantitative modelling (no longer dependent on probability theory but on a novel brand of mathematics which Elie calls the mathematics of price) and the reality of the market.

**Encyclopedia of the Mind** Harold Pashler, 2013-01-14 It's hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences, and computer science and engineering to explore the multidimensional nature of the human mind.

*Relativism in the Philosophy of Science* Martin Kusch, 2021-01-28 'Relativism versus absolutism' is one of the fundamental oppositions that have dominated reflections about science for much of its (modern) history. Often these reflections have been inseparable from wider social-political concerns regarding the position of science in society. Where does this debate stand in the philosophy and sociology of science today? And how does the 'relativism question' relate to current concerns with 'post truth' politics? In *Relativism in the Philosophy of Science*, Martin Kusch examines some of the most influential relativist proposals of the last fifty years, and the controversies they have triggered. He argues that defensible forms of relativism all deny that any sense can be made of a scientific result being absolutely true or justified, and that they all reject 'anything goes' – that is the thought that all scientific results are epistemically on a par. Kusch concludes by distinguishing between defensible forms of relativism and post-truth thinking.

**Can survey design reduce anchoring bias in recall data? Evidence from Malawi** Godlonton, Susan, Hernandez, Manuel A., Paz, Cynthia, 2021-11-04 Recall biases in retrospective survey data are widely considered to be pervasive and have important implications for effective agricultural research. In this paper, we leverage the survey design literature and test three strategies to attenuate mental anchoring in retrospective data collection: question order effects, retrieval cues, and aggregate (community) anchoring. We embed a survey design experiment in a longitudinal survey of smallholder farmers in Malawi and focus on anchoring bias in maize production and happiness exploiting differences between recalled and concurrent responses. We find that asking for retrospective data before concurrent data reduces recall bias by approximately 34% for maize production, a meaningful improvement with no increase in survey data

collection costs. Retrieval cues are less successful in reducing the bias for maize reports and involve more data collection time, while community anchors can exacerbate the bias. Reversing the order of questions and retrieval cues do not help to ease the bias for happiness reports.
