The Four Aces of Hearts I. Bob Garabedian, 2006-07-01 The settings of this book are many and varied. One setting is the Philippine city of Manila; the next setting is the container ship which transports the villains. The third setting is the Panama Canal; the fourth setting is the Republic of Panama itself. Nick Savage is the protagonist secretly employed as a sleeper agent, working for the CIA to keep watch over the Panama Canal. He is to report anything suspicious and discovers an Al-Qaeda plot to destabilize the free world, using the Panama Canal as a pawn. The antagonists in this book are a group of Philippine Nationals of a designated Moro faction of an Al-Qaeda branch. This book is likely to appeal to readers because therein is a plot that leads the reader through true descriptions of many of the Panama Canal Locks operations and hardware. The target audience could be anyone who enjoys an action adventure with a different plot. With a lot of insight into the operation and maintenance of the Canal itself. I worked at the Panama Canal Locks so that the reader will benefit from an insider's look at the operation of the Panama Canal. I also know the weaknesses that are inherent in the operation. I lead the reader through many of my own personal experiences on board ships, and an abundant knowledge of ship handling from many aspects.

**Tash Hearts** Tolstoy Kathryn Ormsbee, 2017-06-06 From the author of *Lucky Few* comes a “refreshing” (Booklist, starred review) teen novel about Internet fame, peer pressure, and remembering not to step on the little people on your way to the top! After a shout-out from one of the Internet’s superstar vloggers, Natasha “Tash” Zelenka suddenly finds herself and her obscure, amateur web series, *Unhappy Families*, thrust in the limelight. She’s gone viral. Her show is a modern

adaption of Anna Karenina—written by Tash’s literary love Count Lev Nikolayevich “Leo” Tolstoy. Tash is a fan of the 40,000 new subscribers, their gushing tweets, and flashy Tumblr gifs. Not so much the pressure to deliver the best web series ever. And when Unhappy Families is nominated for a Golden Tuba award, Tash’s cyber-flirtation with a fellow award nominee suddenly has the potential to become something IRL—if she can figure out how to tell said crush that she’s romantic asexual. Tash wants to enjoy her newfound fame, but will she lose her friends in her rise to the top? What would Tolstoy do?

Basic Biostatistics for Geneticists and Epidemiologists Robert C. Elston,William

Johnson,2008-11-20 Anyone who attempts to read genetics or epidemiology research literature needs to understand the essentials of biostatistics. This book, a revised new edition of the successful Essentials of Biostatistics has been written to provide such an understanding to those who have little or no statistical background and who need to keep abreast of new findings in this fast moving field. Unlike many other elementary books on biostatistics, the main focus of this book is to explain basic concepts needed to understand statistical procedures. This Book: Surveys basic statistical methods used in the genetics and epidemiology literature, including maximum likelihood and least squares. Introduces methods, such as permutation testing and bootstrapping, that are becoming more widely used in both genetic and epidemiological research. Is illustrated throughout with simple examples to clarify the statistical methodology. Explains Bayes’ theorem pictorially. Features exercises, with answers to alternate questions, enabling use as a course text. Written at an elementary mathematical level so that readers with high school mathematics will find the content accessible. Graduate students studying genetic epidemiology, researchers and practitioners from genetics, epidemiology, biology, medical research and statistics will find this an invaluable introduction to statistics.

*Race of Aces* John R Bruning,2020-01-14 The astonishing untold story of the WWII airmen who risked it all in the deadly race to become the greatest American fighter pilot. In 1942, America's deadliest fighter pilot, or ace of aces -- the legendary Eddie Rickenbacker -- offered a bottle of

bourbon to the first U.S. fighter pilot to break his record of twenty-six enemy planes shot down. Seizing on the challenge to motivate his men, General George Kenney promoted what they would come to call the race of aces as a way of boosting the spirits of his war-weary command. What developed was a wild three-year sprint for fame and glory, and the chance to be called America's greatest fighter pilot. The story has never been told until now. Based on new research and full of revelations, John Bruning's brilliant, original book tells the story of how five American pilots contended for personal glory in the Pacific while leading Kenney's resurgent air force against the most formidable enemy America ever faced. The pilots -- Richard Bong, Tommy McGuire, Neel Kearby, Charles MacDonald and Gerald Johnson -- riveted the nation as they contended for Rickenbacker's crown. As their scores mounted, they transformed themselves from farm boys and aspiring dentists into artists of the modern dogfight. But as the race reached its climax, some of the pilots began to see how the spotlight warped their sense of duty. They emerged as leaders, beloved by their men as they chose selfless devotion over national accolades. Teeming with action all across the vast Pacific theater, *Race of Aces* is a fascinating exploration of the boundary between honorable duty, personal glory, and the complex landscape of the human heart. Brings you into the cockpit of the lethal, fast-paced world of fighter pilots . . . Fascinating. -- Sara VladicExtraordinary . . . a must-read. -- US Navy Captain Dan PedersenA heart-pounding narrative of the courage, sacrifice, and tragedy of America's elite fighter pilots. -- James M. ScottVivid and gripping . . . Confirms Bruning's status as the premier war historian of the air. -- Saul David

*Bf 109D/E Aces 1939-41* John Weal, 2012-10-20 The period covered in this volume was considered to be the 'glory years' for the Jagdwaffe fresh from the experience gained in the Spanish Civil War and for the Bf 109 in particular. Many famous pilots scored their first kills in the classic dogfights staged over Poland, Western Europe, the Channel and finally southern England. Some 40 Knight's Crosses were awarded in 1940 alone. However, after sweeping all before them in support of the Blitzkrieg across continental Europe, the Bf 109E pilots were to suffer badly during the Battle of Britain, the result of poor tactics inflicted upon them by the Luftwaffe High Command, and their mount's less than generous range.

*Belief in God* T. J. Mawson, 2005 Belief in God answers two questions: what, if anything, is it that Jews, Christians, and Muslims are agreeing about when they join in claiming that there is a God; and what, if any, prospects are there for rationally defending or attacking this claim? In the context of a

sustained argument for particular answers to these questions, Tim Mawson tackles many of the most prominent topics in the philosophy of religion. He argues that those who believe that there is a God are best interpreted as believing that there is a being who is essentially personal, transcendent, immanent, omnipotent, omniscient, eternal, perfectly free, perfectly good, and necessary; and non-essentially creator of the world and value; revealer of Himself; and offerer of everlasting life. Having explored the meaning and consistency of this conception of God in the first half of the book, Mawson goes on to consider whether or not belief or the absence of belief in such a God might be the sort of thing that does not rationally require argument and, if not, what the criteria for a good argument for or against such a God's existence might be.--BOOK JACKET.

Stochastic Processes Peter Watts Jones, Peter Smith, 2017-10-30 Based on a well-established and popular course taught by the authors over many years, *Stochastic Processes: An Introduction*, Third Edition, discusses the modelling and analysis of random experiments, where processes evolve over time. The text begins with a review of relevant fundamental probability. It then covers gambling problems, random walks, and Markov chains. The authors go on to discuss random processes continuous in time, including Poisson, birth and death processes, and general population models, and present an extended discussion on the analysis of associated stationary processes in queues. The book also explores reliability and other random processes, such as branching, martingales, and simple epidemics. A new chapter describing Brownian motion, where the outcomes are continuously observed over continuous time, is included. Further applications, worked examples and problems, and biographical details have been added to this edition. Much of the text has been reworked. The appendix contains key results in probability for reference. This concise, updated book makes the material accessible, highlighting simple applications and examples. A solutions manual with fully worked answers of all end-of-chapter problems, and Mathematica® and R programs illustrating many processes discussed in the book, can be downloaded from [crcpress.com](http://crcpress.com).
