Using American Community Survey Data to Expand Access to the School Meals Programs National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Estimating Children Eligible for School Nutrition Programs Using the American Community Survey, 2012-10-18 The National School Lunch and School Breakfast Programs, administered by the Food and Nutrition Service (FNS) of the U.S. Department of Agriculture (USDA), are key components of the nation's food security safety net, providing free or low-cost meals to millions of schoolchildren each day. To qualify their children each year for free or reduced-price meals, many families must submit applications that school officials distribute and review. To reduce this burden on families and schools and to encourage more children to partake of nutritious meals, USDA regulations allow school districts to operate their meals programs under special provisions that eliminate the application process and other administrative procedures in exchange for providing free meals to all students enrolled in one or more school in a district. FNS asked the National Academies' Committee on National Statistics and Food and Nutrition Board to convene a panel of experts to investigate the technical and operational feasibility of using data from the continuous American Community Survey (ACS) to estimate students eligible for free and reduced-price meals for schools and school districts. The ACS eligibility estimates would be used to develop claiming percentages that, if sufficiently

accurate, would determine the USDA reimbursements to districts for schools that provided free meals to all students under a new special provision that eliminated the ongoing base-year requirements of current provisions. Using American Community Survey Data to Expand Access to the School Meals Program was conducted in two phases. It first issued an interim report (National Research Council, 2010), describing its planned approach for assessing the utility of ACS-based estimates for a special provision to expand access to free school meals. This report is the final phase which presents the panel's findings and recommendations.

The Routledge Handbook of Poverty in the United States Stephen Haymes, Maria Vidal de Haymes, Reuben Miller, 2014-12-17 In the United States, the causes and even the meanings of poverty are disconnected from the causes and meanings of global poverty. The Routledge Handbook of Poverty in the United States provides an authoritative overview of the relationship of poverty with the rise of neoliberal capitalism in the context of globalization. Reorienting its national economy towards a global logic, US domestic policies have promoted a market-based strategy of economic development and growth as the obvious solution to alleviating poverty, affecting approaches to the problem discursively, politically, economically, culturally and experientially. However, the handbook explores how rather than alleviating poverty, it has instead exacerbated poverty and pre-existing inequalities – privatizing the services of social welfare and educational institutions, transforming the state from a benevolent to a punitive state, and criminalizing poor women, racial and ethnic minorities, and immigrants. Key issues examined by the international selection of leading scholars in this volume include: income distribution, employment, health, hunger, housing and

urbanization. With parts focusing on the lived experience of the poor, social justice and human rights frameworks – as opposed to welfare rights models – and the role of helping professions such as social work, health and education, this comprehensive handbook is a vital reference for anyone working with those in poverty, whether directly or at a macro level.

This comprehensive guide presents clinicians with the latest developments in the diagnosis and management of atrial fibrillation. Divided into seven sections, the book covers clinical spectrum, diagnosis, therapeutic strategies, interventions, and new technologies used in its treatment and prevention. Complete sections are dedicated to other arrhythmias, to cardiac surgery and to future directions in atrial fibrillation. With more than 1000 pages providing in depth coverage of the topic, this manual is further enhanced by

Update on Dementia Davide Moretti, 2016-09-28 The dementia challenge is the largest health effort of the times we live in. The whole society has to move to a realization of the significance of prioritization to make an attempt in the direction of mental health promotion and dementia risk reduction. New priorities for research are needed to go far beyond the usual goal of constructing a disease course-modifying medication. Moreover, a full empowerment and engagement of men and women living with dementia and their caregivers, overcoming stigma and discrimination should be promoted. The common efforts and the final aim will have to be the progress of a ''dementia-constructive'' world, where people with dementia can take advantage of equal opportunities.
