Emerging Technologies to Promote and Evaluate Physical Activity Dan J Graham,James Aaron Hipp,Simon Marshall,Jacqueline Kerr,2014-10-23 Increasingly, efforts to promote and measure physical activity are achieving greater precision, greater ease of use, and/or greater scope by incorporating emerging technologies. This is significant for physical activity promotion because more precise measurement will allow investigators to better understand where, when, and how physical activity is and is not occurring, thus enabling more effective targeting of particular behavior settings. Emerging technologies associated with the measurement and evaluation of physical activity are noteworthy because: (1) Their ease of use and transferability can greatly increase external validity of measures and findings; (2) Technologies can significantly increase the ability to analyze patterns; (3) They can improve the ongoing, systematic collection and analysis of public health surveillance due to real-time capabilities associated with many emerging technologies; (4) There is a need for research and papers about the cyberinfrastructure required to cope with big

data (multiple streams, processing, aggregation, visualization, etc.); and (5) Increasingly blurred boundaries between measurement and intervention activity (e.g., the quantified-self /self-tracking movement) may necessitate a reevaluation of the conventional scientific model for designing and evaluating these sorts of studies. There have been many recent, disparate advances related to this topic. Advances such as crowdsourcing allow for input from large, diverse audiences that can help to identify and improve infrastructure for activity (e.g., large group identification of environmental features that are conducive or inhibiting to physical activity on a national and even global scale). Technologies such as Global Positioning Systems (GPS) and accelerometry are now available in many mobile phones and can be used for identifying and promoting activity and also understanding naturalistically-occurring activity. SenseCam and other personal, visual devices and mobile apps provide person point of view context to physical activity lifestyle and timing. Further, multiple sensor systems are enabling better identification of types of activities (like stair climbing and jumping) that could not previously be identified readily using objective measures like pedometers or accelerometers in isolation. The ability of activity sensors to send data to remote servers allows for the incorporation of online technology (e.g., employing an online social-network as a source of inspiration or accountability to achieve physical activity goals), and websites such as Stickk.com enable individuals to make public contracts visible to other users and also incorporates financial incentives and disincentives in order to promote behaviors including physical activity. In addition, the increasing use of active-gaming (e.g., Wii, XBox Kinect) in homes, schools, and other venues further underscores the growing link between technology and physical activity. Improvements in mathematical models and computer algorithms also allow greater capacity for classifying and evaluating physical activity, improving consistency across research studies. Emerging technologies in the promotion and evaluation of physical activity is a significant area of interest because of its ability to greatly increase the amount and quality of global recorded measurements of PA patterns and its potential to more effectively promote PA. Emerging technologies related to physical activity build on our own and others' interdisciplinary collaborations in employing technology to address public health challenges. This research area is innovative in that it uses emerging resources including social media, crowdsourcing, and online gaming to better understand patterns of physical activity.

Privacy and Security in the Digital Age Michael Friedewald, Ronald J Pohoryles, 2016-01-13 Privacy and data protection are recognized as fundamental human rights. Recent developments, however, indicate that security issues are used to undermine these fundamental rights. As new technologies effectively facilitate collection, storage, processing and combination of personal data government agencies take advantage for their own purposes. Increasingly, and for other reasons, the business sector threatens the privacy of citizens as well. The contributions to this book explore the different aspects of the relationship between technology and privacy. The emergence of new technologies threaten increasingly privacy and/or data protection; however, little is known about the potential of these technologies that call for innovative and prospective analysis, or even new conceptual frameworks. Technology and privacy are two intertwined notions that must be jointly analyzed and faced. Technology is a social practice that embodies the capacity of societies to transform themselves by creating the possibility to generate and manipulate not only physical objects, but also symbols, cultural forms and social relations. In turn, privacy describes a vital and complex aspect of these social relations. Thus technology influences people's understanding of privacy, and people's understanding of privacy is a key factor in defining the direction of technological development. This book was originally published as a special issue of *Innovation: The European Journal of Social Science Research*.

Language Teaching in the Linguistic Landscape David Malinowski, Hiram H. Maxim, Sébastien Dubreil, 2021-02-04 This book builds upon the growing field of Linguistic Landscape in order to demonstrate the power of a spatialized approach to language, culture, and literacy education as it opens classrooms and cultivates new competencies. The chapters develop major themes, including re-imagining language curricula, language classrooms, and schoolscapes in dialogue with the heteroglossic discourses of the local; developing L2 learners' symbolic, translingual competencies through engagement with situated, multimodal texts; fostering critical social awareness through language study in the linguistic landscape; expanding opportunities for situated L2 reading and writing; and cultivating language students' capacities for engaged scholarship and research in out-of-class contexts. By exploring the pedagogical possibilities of place-based approaches to literacy development, this volume contributes to the reimagining of language education through the linguistic landscape.

Temporary Appropriation in Cities Alessandro Melis, Jose Antonio Lara-Hernandez, James Thompson, 2019-12-12 This book conceptualises and illustrates temporary appropriation as an urban phenomenon, exploring its contributions to citizenship, urban social sustainability and urban health. It explains how some forms of appropriation can be subversive, existing in a grey area between legal and illegal activities in the city. The book explores the complex and the multi-scalar nature of temporary appropriation, and touches on its relationship to issues such as: sustainability and building re-use; culture; inclusivity, including socio-spatial inclusion; streetscape design; homelessness; and regulations controlling the use of public spaces. The book focuses on temporary appropriation as a necessity of adapting human needs in a city, highlighting the flexibility that is needed within urban planning and the further research that should be undertaken in this area. The book utilises case studies of Auckland, Algiers and Mexico City, and other cities with diverse cultural and historical backgrounds, to explore how planning, design and development can occur whilst maintaining community diversity and resilience. Since urban populations are certain to grow further, this is a key topic for understanding urban dynamics, and this book will be of interest to academics and practitioners alike.
