Mobile Integrated Healthcare MedStar Mobile Healthcare,2014-08-15 The healthcare landscape in the United States is evolving rapidly but has largely ignored EMS, until recently. As the country focuses on cost containment and more appropriate methods to deliver services as a result of healthcare reform, EMS will need to undergo dramatic change to fill a new role in the healthcare system. The current traditional delivery method for EMS is financially unsustainable and will soon not be a viable option for care. EMS has a choice to make--adapt to the new environment or be left behind. A viable alternative to the current structure of EMS is Mobile Integrated Healthcare (MIH)--community-based health management that is fully integrated with the overall health system. Various programs like this have appeared across the United States, but a definitive resource that describes how to successfully implement such a program has not been available. *Mobile Integrated Healthcare: Approach to Implementation* fills this void by serving as a reference not only to the EMS community, but also to other medical professionals working toward implementation of a successful MIH program. *Mobile Integrated Healthcare: Approach to Implementation* provides a step-by-step approach for the identification of community needs, forming the appropriate partnerships, selection of staff, acquiring resources, patient identification, and overcoming hurdles to a successful program. Examples from successful programs across the country are included. The author team of *Mobile Integrated Healthcare: Approach to Implementation* has developed and implemented a functioning, successful program. Their experiences with community partners and other healthcare specialists provide a broad-based view of the future of EMS in the healthcare industry. *Mobile Integrated Healthcare: Approach to Implementation* is written by leaders in the field of EMS who are committed to guiding the successful evolution of EMS. Their approach to integration should be considered by EMS management, hospital-based social workers, and community partners such as county health authorities, homeless coalitions, and psychiatric services. The type of care EMS providers give needs to evolve with the changing landscape of healthcare. This text describes how healthcare professionals and community partners can work together to facilitate that change and define a successful MIH program.

Mobile Telemedicine Yang Xiao,Hui Chen,2008-06-03 The concept of medical treatment from a distance (in absentia care) is actually quite ancient, dating back to tribal days where smoke signals were used to warn of serious disease in a community. Nowadays, telemedicine is used to facilitate treatment in rural areas, where the nearest doctor is miles away, through various forms of information technology, including videoconferencing and digital imaging. It can also be used to conveniently monitor chronically ill patients through electronic devices so that they can enjoy a better quality of life. But despite the strides that have been made in utilizing the telemedicine technology, there remain a number of limitations and weaknesses that must be overcome before this treatment paradigm can reach its full potential. In *Mobile Telemedicine: A Computing and Network Perspective*, noted computer scientists Yang Xiao and Hui Chen examine those computing and networking dilemmas arising from wireless and mobile telemedicine. Comprised of the contributions of many prominent international researchers, the book discusses the relative merits and limitations of the existing technology and sheds light on future developments. It begins with a discussion of patient care and monitoring through items such as personal alarm systems. It then reviews the current methods available to monitor cardiac and diabetic patients, analyzes the security and privacy considerations that arise with respect to the transmission of sensitive information, and examines issues relating to networking support. Finally, it concludes with a section on the opportunities and challenges faced by those involved at this intersection of healthcare and communications. By bridging the fields of medicine and information technology, this volume serves as a useful springboard for those pioneering IT researchers looking for a comprehensive reference. The book also provides information for those involved with either communications or healthcare who want to learn about the current state and potential use of this technology.

Mobile Intensive Care Units R. Frey,P. Rheindorf,E. Nagel,P. Sands,P. Safar,2012-12-06 Emergency care is improving throughout the world and thousands of lives are being saved each year. However, there are still too many patients who die before help reaches them in the form of advanced rescue and definitive emergency care techniques. In an effort to improve emergency care throughout the world, the International Committee of Emergency and Disaster Medicine meets bi annually. This meeting takes place in Mainz, Germany in September in order to discuss issues, exchange information, and establish recommendations designed to improve emergency care. The group is independent of political, national, racial, religious, or commercial influences and, in this sense, similar to the Club of Rome which attempts advances in sociology, biology and natural sciences. Therefore, the organization could be called the Club of Mainz for the field of emergency and disaster medicine. The following book contains the proceedings of the International Symposium on Mobile Intensive Care Units and Advanced Emergency Care Units at Mainz from September 24-27, 1973, and the discussions evoked by the first activities of the Club of Mainz and the internationally acknowledged Recommendations. At this time we also announce the next meeting and International Symposium on Disaster Medicine, open to the public, organized by the Club of Mainz (October 1 - 2, 1977).
