Intelligent System Chatchawal Wongchoosuk,2018-08-29 Intelligent system is an advanced machine that can perceive, learn, and solve the problems with a great accuracy. Technologies with intelligent system are currently available in the market and used in real-world applications, i.e., self-driving cars, Siri, Alexa, Facebook, and so on. To exceed human cognitive capabilities, the important keys rely on the development of sensors and algorithms. Therefore, the insight into artificial intelligence (AI) methods becomes a fundamental building block for design and construction of intelligent system with particular applications. This book aims to describe the AI systems ranging from the basic knowledge, i.e., algorithm and mathematical models of AI techniques, fundamentals of machine learning, genetic algorithm, and fuzzy logic, to the current state-of-the-art applications, such as smart road and biomedical applications.

Multi-Agent Systems Faisal Alkhateeb,Eslam Al Maghayreh,Iyad Abu Doush,2011-04-01 A multi-agent system (MAS) is a system composed of multiple interacting intelligent agents. Multi-agent systems can be used to solve problems which are difficult or impossible for an individual agent or monolithic system to solve. Agent systems are open and extensible systems that allow for the deployment of autonomous and proactive software components. Multi-agent systems have been brought up and used in several application domains.

Steroid Hormone Receptors: Basic and Clinical Aspects V. K. Moudgil,2013-03-13 The past few years have witnessed the emergence of steroid hormones as the wonder molecules which generate as much discussion in the scientific literature as they do in a typical living room. This transition has been a result of the tremendous public and scientific interest in the normal functioning of the hormones as well their suggested involvement in several clinical conditions. In the recent past, notable scientific and technological advances have been made in the areas of contraception and regulation of fertility. Steroid receptors are the indispensable mediators of hormonal responses and are complex protein molecules which appear to exist in association with other, yet undefined, proteins and/or factors. Receptors for vitamin D, retinoic acid and the thyroid hormones share structural similarities with steroid receptors, and the roster of this superfamily is still expanding. While our knowledge of the diversity and magnitude of steroid effects has advanced, the precise mode of steroid hormone action has alluded investigators. This volume brings together an international team of prominent investigators who discuss their most recent work on the basic and clinical aspects of steroid/nuclear receptors. The contributions represent updated versions of the invited presentations made at The Second Meadow Brook Conference on Steroid Receptors in Health and Disease. I am grateful to my colleagues on the Scientific Committee: Etienne Baulieu, Jack Gorski, Benita Katzenellenbogen, David Toft and James WittJiff, who provided the vision and guidance in formulating an outstanding program.

In modern businesses the same cloud-based data stores and applications might be accessed by hundreds of different applications from thousands of different devices via APIs. To make this happen, APIs must be wired together i.e. integrated. Oracle Integration Cloud Service provides a complete method for integrating enterprise applications in the cloud. Integration Cloud Service (ICS) provides a cloud hosted means to integrate systems together using a graphical means to define and represent integrations. This book will be a comprehensive, hands-on guide to building successful, high-availability integrations on ICS. This book sets out to demonstrate how ICS can be used to effectively implement integrations that work both in the cloud and on premise. Temper Sands in Prehistoric Oceanian Pottery William R. Dickinson,2006-01-01 Oceanian ceramic cultures making earthenware pottery spread during the past 3500 years through a dozen major island groups spanning 6000 km of the tropical Pacific Ocean from western Micronesia to western Polynesia. Island potters mixed sand as temper into clay bodies during ceramic manufacture. The nature of island sands is governed by the geotectonics of hotspot chains, island arcs, subduction zones, backarc basins, and remnant arcs as well as by sedimentology. Because small islands with bedrock exposures of restricted character are virtual point sources of sand, many tempers are diagnostic of specific islands. Petrographic study of temper sands in thin section allows distinction between indigenous pottery and exotic pottery transported from elsewhere. Study of 2223 prehistoric Oceanian potsherds from 130 islands and island clusters indicates the nature of Oceanian temper types and documents 105 cases of interisland transport of ceramics over distances typically

Measuring Arthropod Biodiversity Jean Carlos Santos,Geraldo Wilson Fernandes,2020-11-11 This book brings together a wide range of sampling methods for investigating different arthropod groups. Each chapter is organized to describe and evaluate the main sampling methods (field methods, materials and supplies, sampling protocols, effort needed, and limitations); in addition, some chapters describe the specimen preparation and conservation, species identification, data collection and management (treatment, statistical analysis, interpretation), and ecological/conservation implications of arthropod communities. The book aims to be a reference for zoologists, entomologists, arachnologists, ecologists, students, researchers, and

for those interested in arthropod science and biodiversity. We hope the book will contribute to advance knowledge on field assessments and conservation strategies. Arthropods represent the most speciose group of organisms on Earth, with a remarkable number of species and interactions still to be described. These invertebrates are recognized for playing key ecological roles in terrestrial, freshwater and marine ecosystems. Because of the increasing and relentless threats arthropods are facing lately due to a multitude of human induced drivers, this book represents an important contribution to assess their biodiversity and role in ecosystem functioning and generation of ecosystem services worldwide.

Pediatric Pelvic and Proximal Femoral Osteotomies Reggie C. Hamdy, Neil Saran, 2018-10-04 This unique, case-based text offers a comprehensive discussion of pelvic and proximal femoral osteotomies in the pediatric population. Beginning with chapters on preoperative planning and radiologic evaluation of the adolescent hip, subsequent chapters are sensibly divided into three thematic sections, which use a consistent chapter format presenting the case history, relevant imaging, treatment goals, the management strategy, and clinical pearls and pitfalls. Part I describes the various pediatric pelvic osteotomies, including the Salter, Pol de Coeur, Tönnis, Pemberton, and San Diego approaches, among others. Pediatric proximal femoral osteotomies comprise part II, presenting the McHale procedure, varus and valgus osteotomies, Morscher osteotomy, and Shepherd's Crook deformity, to name just a few. The final section covers combined and miscellaneous osteotomies and procedures for the pediatric hip, such as osteochondroplasty, hip instability, hip arthrodesis, and SUPERhip and SUPERhip2 procedures for congenital femoral deficiency. Each chapter is generously illustrated and includes a handy table of indications and contraindications for the procedure described. In infancy, childhood and adolescence, the hip joint is very susceptible to abnormalities (congenital or acquired) that may lead to morphological alterations with potential sequelae, specifically pain and difficulty to ambulate, sit and perform daily activities. Restoring normal anatomy and biomechanics of the hip joint by various pelvic and/or proximal femoral osteotomies remains the cornerstone in the management of these conditions. To this end, *Pediatric Pelvic and Proximal Femoral Osteotomies* will be an invaluable resource for all pediatric orthopedic surgeons, trainees and students both in the medical and

paramedical field.
