Sketching for Architecture + Interior Design Stephanie Travis,2015-07-20 The debate surrounding hand drawing versus computer-generated imagery has become a hot topic. Having grown up with computers, today's interior design and architecture students are extremely adept at creating computer imagery, but often lack confidence in their freehand sketching skills, or do not know how to sketch at all. Sketching, and the careful observation that it entails, is essential for the successful development of the next generation of designers. Forty-five step-by-step exercises take the student from the simple three-dimensional forms of furniture, to interiors, to complex building exteriors, and cityscapes. Technical topics covered include tools, line weights, perspective, proportion, composition, shading, serial views, and context. Exercises are illustrated with beautiful sketches specially created by the author. Sketching for Architecture + Interior Design is an indispensable and practical guide for students wishing to master the art of looking and sketching.

Hilbert's Fifth Problem and Related Topics Terence Tao,2014-07-18 In the fifth of his famous list of 23 problems, Hilbert asked if every topological group which was locally Euclidean was in fact a Lie group. Through the work of Gleason, Montgomery-Zippin, Yamabe, and others, this question was solved affirmatively; more generally, a satisfactory description of the (mesoscopic) structure of locally compact groups was established. Subsequently, this structure theory was used to prove Gromov's theorem on groups of polynomial growth, and more recently in the work of Hrushovski, Breuillard, Green, and the author on the structure of approximate groups. In this graduate text, all of this material is presented in a unified manner, starting with the analytic structural theory of real Lie groups and Lie algebras (emphasising the role of one-parameter groups and the Baker-Campbell-Hausdorff formula), then presenting a proof of the Gleason-Yamabe structure theorem for locally compact groups (emphasising the role of Gleason metrics), from which the solution to Hilbert's fifth problem follows as a corollary. After reviewing some model-theoretic

preliminaries (most notably the theory of ultraproducts), the combinatorial applications of the Gleason-Yamabe theorem to approximate groups and groups of polynomial growth are then given. A large number of relevant exercises and other supplementary material are also provided.

A World More Concrete N. D. B. Connolly,2016-03-25 Connolly argues that Americans, immigrants, and even indigenous people, between the 1890s and the 1960s, made tremendous investments in racial apartheid, largely in an effort to govern growing cities and to unleash the value of land as real estate. Through a focus on South Florida, the book illustrates how entrepreneurs used land and debates over property rights to negotiate the workings of Jim Crow segregation.

Cartography Past, Present and Future D.W. Rhind,D.R.F. Taylor,2013-10-22 Making maps dates back at least four thousand years and it is widely recognised that many maps are of great historical value and present a skilled method of summarising the real world on a sheet of paper. Less well known is the judgement involved in the selection and simplification of features, the complex transformation of space and the exacting standards which are needed in cartography. This book is primarily a tribute to Professor F.J. Ormeling, former President and Secretary/Treasurer of the ICA and gives a wide ranging review of the current status of cartography, how this status was attained and the way in which the subject is expected to evolve over the next decade. It is composed of two main sections. In the first, the present state of cartography in different countries is examined. The second section is a thematic view in which some of the major issues and developments in cartography are discussed in turn, including art and science in cartography, the character of historical cartography, the role of map making in developing countries, the impact of a possible ideal computer mapping facility and how cartography has changed in recent years. There are international contributions from authors distinguished and internationally recognised in cartography and related fields and who have had a significant input to the ICA.
