Medicine, Faith and Politics in Agogo Pascal

Schmid,2018-03-03 Medicine, Faith and Politics in Agogo examines the development of health care delivery at a former mission hospital in Ghana. It reveals the configurations of interests, values, and ideologies that shaped the development and implementation of health care practices, strategies, and concepts. By providing an in-depth analysis, the book contributes a particular perspective on the history of health care delivery in rural Africa and beyond. It addresses topics that are still heavily under-researched. These include the 'decolonisation' of health care as well as the development and implementation of medical concepts for 'developing countries' such as primary health care. Dissertation. The conflicts between herders and farmers in Asante Akyim Agogo. How can they be resolved? Caeser Nibelli,2019-11-11 Academic Paper from the year 2019 in the subject Sociology - Miscellaneous, , language: English, abstract: This study examines the conflicts between herders and farmers in the Asante Akyim Agogo traditional area in Ghana. Herder-farmer relations and interactions are not new in Ghana. These relations of the herders and farmers are presented as noticeable by conflict, complementarities and cooperation. However, there are widespread reports of the increase in violent conflicts between the farmers and herders in many parts of Ghana. The Fulani herdsmen have always been alleged to be violent in their interactions with the residents over the use of resources. The study examined the causes of the herder-farmer conflicts and the effects of the conflicts in Asante Akyim Agogo. The study

also examines the responses of the local and central government, and the strategies adopted to curb the conflict. The study adopted a qualitative research approach which helped in gathering information on the conflicts between herders and farmers in Agogo in order to explain the findings of the study and making valid conclusions. Secondary data from books, journals, articles and the internet were used during the research. Given the complexity of the subject matter in this content analysis, and the number of philosophical questions that it raises, it took an interpretive approach. It was based on a critical review of existing literature from a variety of academic works. The underpinning theories for this study were the theory of Farmer-Herder Relations, Conflict theory and, Environmental Scarcity and Eco-Survivalism theories of Conflict. These interpretations emphasized on the increase of crop destruction, cattle rustling, raping of women, killing of cattle and armed robbery as causes of farmer-herder conflict Asante Akyim Agogo. The implication was that, several people lost their lives and properties, poverty and social problems, destruction of farm products and reduction of output and income of farmers. The study concluded with the recommendation that farmers and herders or pastoralists must create good exchange arrangements with families to make use of crop residue or to trade goods. These lawful engagements can include the means for control over the pasture, regulation of access to routes, regulation of disputes over property rights, identification of herds, marriage disputes and other social problems.

Semantic Web and Model-Driven Engineering

Fernando S. Parreiras, 2012-05-09 The next enterprise computing era will rely on the synergy between both technologies: semantic web and model-driven software development (MDSD). The semantic web organizes system knowledge in conceptual domains according to its meaning. It addresses various enterprise computing needs by identifying, abstracting and rationalizing commonalities, and checking for inconsistencies across system specifications. On the other side, model-driven software development is closing the gap among business requirements, designs and executables by using domain-specific languages with custom-built syntax and semantics. It focuses on using modeling languages as programming languages. Among many areas of application, we highlight the area of configuration management. Consider the example of a telecommunication company, where managing the multiple configurations of network devices (routers, hubs, modems, etc.) is crucial. Enterprise systems identify and document the functional and physical characteristics of network devices, and control changes to those characteristics. Applying the integration of semantic web and model-driven software development allows for (1) explicitly specifying configurations of network devices with tailor-made languages, (2) for checking the consistency of these specifications (3) for defining a vocabulary to share

device specifications across enterprise systems. By managing configurations with consistent and explicit concepts, we reduce cost and risk, and enhance agility in response to new requirements in the telecommunication area. This book examines the synergy between semantic web and model-driven software development. It brings together advances from disciplines like ontologies, description logics, domain-specific modeling, model transformation and ontology engineering to take enterprise computing to the next level.

Agogo Bells to Xylophone Maggie Cotton, 2005-02 Agogo bells to Xylophone is just what it says - a friendly guide to all those instruments which clog up the music cupboard and don't come with an instruction manual. Maggie Cotton's clever descriptions and Alison Dexter's clear illustrations unlock the magic of these often misunderstood music makers. The book is a treasury of simple but effective techniques for getting the best from classroom instruments - from holding claves correctly so that the sound carries, to the party trick of the tambourine

thumb trill. And there are sections on care and safety, restoring damaged instruments, and advice on instruments for children with special needs. An invaluable handbook for every school - now with a fresh new cover.

Synthesizers and Subtractive Synthesis 1 Jean-Michel Réveillac, 2024-04-02 Subtractive sound synthesis has been one of the most widely used techniques in electronic music and for many analog synthesizers since the early 1960s. It is based on a simple principle, but its operation remains complex, involving many parameters. It can be enriched by a variety of effects that give the sound its authenticity. It does not just imitate musical instruments, but can also transcribe noises present in natural soundscapes, or generate entirely synthetic sounds. **Synthesizers and Subtractive Synthesis 1** presents the theoretical basis of a sound phenomenon, the different types of synthesis, the components that are required and present in synthesizers, the working environment specific to the study of subtractive synthesis, and the hardware and software available. After reading the various chapters of this book, readers will have a clear vision of the tools and actions required to grasp the world of subtractive sound.

Science, Africa and Europe Martin Lengwiler, Nigel Penn, Patrick Harries, 2018-10-12 Historically, scientists and experts have played a prominent role in shaping the relationship between Europe and Africa. Starting with travel writers and missionary intellectuals in the 17th century, European savants have engaged in the study of nature and society in Africa. Knowledge about realms of the world like Africa provided a foil against which Europeans came to view themselves as members of enlightened and modern civilisations. Science and technology also offered crucial tools with which to administer, represent and legitimate power relations in a new global world but the knowledge drawn from contacts with people in far-off places provided Europeans with information and ideas that contributed in everyday ways to the scientific revolution and that provided explorers with the intellectual and social capital needed to develop science into modern disciplines at home in the metropole. This book poses questions about the changing role of European science and expert knowledge from early colonial times to post-colonial times. How did science shape understanding of Africa in Europe and how was scientific knowledge shaped, adapted and redefined in African contexts?

Transborder Pastoral Nomadism and Human Security in

Africa Richard Olaniyan, Olukayode A. Faleye, Innocent Moyo, 2021-11-29 This book examines the nexus between political borders, pastoral nomadism, and human security in Africa. It uses a host of applied interdisciplinary insights to analyse social, political, and cultural processes, circumstances, and consequences to showcase the human security crisis in the context of climate change, inter-group relations, leadership strategies, institutions, and governance within the region. With a special focus on West Africa and Nigeria, the volume discusses crucial themes that highlight the role of borders in the security architecture of the region which include, • Political economy of herdsman-farmers' conflicts in West Africa; • The scarcity-migration perspective of the Sahel region; • Population pressure, urbanization, and nomadic pastoral violence in West Africa; • Human trafficking and kidnapping for ransom in Nigeria; • Drivers of 'labour' migration of Fulani herders to Ghana, and other topics. A key contribution to a pressing issue, this volume will be of interest to scholars and students of history, political science, anthropology, geography, international relations, literature, environmental science, and peace and conflict studies.
