Opening Theory Made Easy Hideo Ōtake, 2002 In this book, Otake presents 20 principles for opening play. You will find a discussion of the fundamentals of the opening and strategy. Almost a third of the book is devoted to the important topic of shape, a subject not well understood by most western go players. Otake explains sophisticated concepts in a simple and accessible way, making the book easy to digest regardless of your playing strength. By applying these principles when you make your strategic decisions, you will improve your game enormously. There are many things about the opening that are a bit difficult, but a little study of opening principles can pay big dividends in your win/loss record The book is divided into three parts: Chapter One: Fuseki Fundamentals Chapter Two: Shape Chapter Three: Strategy

**U.S. Marine Close Combat Fighting Handbook** United States Marine Corps., 2011-01-26 There are currently more than 200,000 active-duty U.S. Marines and another 40,000 in the reserves. These Marines depend on the skills and techniques taught in this concise manual—and now you can too! Today's Marines operate in conflict situations that change from low intensity to high intensity over a matter of hours. This fully-illustrated guide features both the lethal and nonlethal techniques needed to responsibly handle any situation without unnecessarily escalating the violence. The U.S. Marine Close Combat Fighting Handbook explains the methods to quickly neutralize any attacker in close quarters and teaches you how to use any part of the human body as a weapon. It covers breaking a fall, defending against headlocks and chokes, protecting against punches and kicks, surviving armed attackers and more.

**Warhol-isms** Andy Warhol, 2022-05-10 A unique collection of

brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—"In the future, everyone will be world-famous for 15 minutes." Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well.I went to [a psychiatrist] once, and he never called me back.They always say that time changes things, but you actually have to change them yourself.I've never met a person I couldn't call a beauty.New things are always better than old things.I'm still a commercial artist. I was always a commercial artist.

*Hidden in Plain Sight* Ellis Amdur,2018-04-27 Ellis Amdur's writing on martial arts has been groundbreaking. In *Dueling with O-sensei*, he challenged practitioners that the moral dimension of martial arts is expressed in acts of integrity, not spiritual platitudes and the deification of fantasized warrior-sages. In *Old School*, he applied both academic rigor and keen observation towards some of the classical martial arts of Japan, leavening his writing with vivid descriptions of many of the actual practitioners of these wonderful traditions. His first edition of *Hidden in Plain Sight* was a discussion of esoteric training methods once common, but now all but lost within Japanese martial

arts. These methodologies encompassed mental imagery, breath-work, and a variety of physical techniques, offering the potential to develop skills and power sometimes viewed as nearly superhuman. Usually believed to be the provenance of Chinese martial arts, Amdur asserted that elements of such training still remain within a few martial traditions: literally, 'hidden in plain sight.' Two-thirds larger, this second edition is so much more. Amdur digs deep into the past, showing the complexity of human strength, its adaptation to varying lifestyles, and the nature of physical culture pursued for martial ends. Amdur goes into detail concerning varieties of esoteric power training within martial arts, culminating in a specific methodology known as 'six connections' or 'internal strength.' With this discussion as a baseline, he then discusses the transfer of esoteric power training from China to various Japanese jujutsu systems as well as Japanese swordsman-ship emanating from the Kurama traditions. Finally, he delves into the innovative martial tradition of Daito-ryu and its most important offshoot, aikido, showing how the mercurial, complicated figures of Takeda Sokaku and Morihei Ueshiba were less the embodiment of something new, than a re-imagining of their past.

**Learning from the Stones** David Lai, 2004

**Inventing Eastern Europe** Larry Wolff, 1994 Wolff explores how Western thinkers contributed to defining and characterizing Eastern Europe as half-civilized and barbaric.

The Oxford History of Board Games David Parlett, 1999 For thousands of years, people have been planning attacks, captures, chases, and conquests - on a variety of different boards designed for an astonishing diversity of games. Today the compelling mix of strategy, skill, and chance is as strong as ever; new board games are invented almost daily, while the perennial favourites continue to attract new

devotees and reveal new possibilities. The Oxford History of Board Games investigates the principles of board games throughout the ages and across the world, exploring the fascinating similarities and differences that give each its unique appeal, and drawing out the significance of game-playing as a central part of human experience - as vital to a culture as its music, dance, and tales. Beautifully illustrated and with diagrams to show the finer points of the games, this is a fascinating and accessible guide to a richly rewarding subject. In his trade-mark accessible, entertaining style, David Parlett looks at the different families of games: games based on configuration or connection, races or chases, wars or hunts, capture or blockade. He focuses mainly on traditional games, the folk entertainments that have grown up organically through the centuries, and which exhibit endless local variations, although he discusses also the commercial products that have tried, with varying degrees of success, to match their astonishing popularity. This is not primarily a how-to book, although the rules and strategies of certain games are discussed in detail, neither does it offer sure-fire tips for success, although with a fuller understanding of a game the reader will undoubtedly become a better-informed, if not better, player. Rather, it is an affectionate and authoritative survey of one of the most familiar parts of our cultural history, which has until now been inexplicably neglected.

**Mixed Martial Arts** BJ Penn, Glen Cordoza, Erich Krauss, 2007-05-15 Mixed Martial Arts outlines the revolutionary system of fighting used by world-renowned fighter BJ Penn. Penn, one of the most technical and decorated fighters in the world today, illustrates fighting techniques that teach you how to mix strikes with takedowns, ground and pound an opponent into submission, fight against the cage and formulate strategies based upon your personal

attributes and strengths.

**Science and the Production of Ignorance** Janet Kourany, Martin Carrier, 2020-02-18 An introduction to the new area of ignorance studies that examines how science produces ignorance—both actively and passively, intentionally and unintentionally. We may think of science as our foremost producer of knowledge, but for the past decade, science has also been studied as an important source of ignorance. The historian of science Robert Proctor has coined the term agnotology to refer to the study of ignorance, and much of the ignorance studied in this new area is produced by science. Whether an active or passive construct, intended or unintended, this ignorance is, in Proctor's words, “made, maintained, and manipulated” by science. This volume examines forms of scientific ignorance and their consequences. A dialogue between Proctor and Peter Galison offers historical context, presenting the concerns and motivations of pioneers in the field. Essays by leading historians and philosophers of science examine the active construction of ignorance by biased design and interpretation of experiments and empirical studies, as seen in the “false advertising” by climate change deniers; the “virtuous” construction of ignorance—for example, by curtailing research on race- and gender-related cognitive differences; and ignorance as the unintended by-product of choices made in the research process, when rules, incentives, and methods encourage an emphasis on the beneficial and commercial effects of industrial chemicals, and when certain concepts and even certain groups' interests are inaccessible in a given conceptual framework. Contributors Martin Carrier, Carl F. Cranor, Peter Galison, Paul Hoyningen-Huene, Philip Kitcher, Janet Kourany, Hugh Lacey, Robert Proctor, Londa Schiebinger, Miriam Solomon, Torsten Wilholt

### **A Sociological Theory of Communication** Loet

Leydesdorff, 2001-01-01 Networks of communication evolve in terms of reflexive exchanges. The codification of these reflections in language, that is, at the social level, can be considered as the operating system of society. Under sociologically specifiable conditions, the discursive reconstructions can be expected to make the systems under reflection increasingly knowledge-intensive. This sociological theory of communication is founded in a tradition that includes Giddens' (1979) structuration theory, Habermas' (1981) theory of communicative action, and Luhmann's (1984) proposal to consider social systems as self-organizing. The study also elaborates on Shannon's (1948) mathematical theory of communication for the formalization and operationalization of the non-linear dynamics. The development of scientific communications can be studied using citation analysis. The exchange media at the interfaces of knowledge

production provide us with the evolutionary model of a Triple Helix of university-industry-government relations. The construction of the European Information Society can then be analyzed in terms of interacting networks of communication. The issues of sustainable development and the expectation of social change are discussed in relation to the possibility of a general theory of communication.

**REVIEW** In this book, Loet Leydesdorff sets out to answer the question, Can society be considered as a self-organizing (autopoietic) system. In the process, Leydesdorff, develops a general sociological theory of communication, as well as a special theory of scientific communication designed to analyze complex systems such as the European Information Society. **A History of the World in Seven Cheap Things** Raj Patel, Jason W. Moore, 2018-05-22 Nature, money, work, care, food, energy, and lives: these are the seven things that have made our world and will shape its future. In making these things cheap, modern commerce has transformed, governed, and devastated Earth. In A History of the World in Seven Cheap Things, Raj Patel and Jason W. Moore present a new approach to analyzing today's planetary emergencies. Bringing the latest ecological research together with histories of colonialism, indigenous struggles, slave revolts, and other rebellions and uprisings,

Patel and Moore demonstrate that throughout history, crises have always prompted fresh strategies to make the world cheap and safe for capitalism. At a time of crisis in all seven cheap things, innovative and systemic thinking is urgently required. This book proposes a radical new way of understanding-and reclaiming-the planet in the turbulent twenty-first century.
