Strike From the Sky Richard P. Hallion, 2010-03-14 Chronicles the history of battlefield air attack from 1911, when the airplane was first used in war, to the end of World War II.

Strike from the Air Terry C. Treadwell, 2020-11-23 "Follows the development of US aviation from the captive balloons of the Civil War, through WWI and into the post war years . . . Highly Recommended." –Firetrench *Strike from the Air* looks at the early development of the U.S. military aviation branches, starting with the Civil War and moving to the first use of military aircraft during General Pershing's pursuit of the revolutionary Pancho Villa. Before the country was drawn into the First World War, a number of Americans traveled to Europe to volunteer for the Lafayette Escadrille in France, as well as the Royal Flying Corps and the Royal Naval Air Service. Many of these men eventually joined the newly created United States Air Service, taking their valuable experience and knowledge with them. Among the notable early US aviators were individuals such as Eugene Bullard, the first African-American military pilot, and eccentric loners like Frank Luke. The part played by the US Navy and USMC is not neglected. At the end of the First World War, a group of American pilots joined together to form the Kosciuszko Squadron that fought against the Russians in the Polish/Russian War. The final part of the book contains escape reports by USAS pilots and observers, which gives a real insight into the conditions they were subjected to in German prison camps during the First World War. To complete this fascinating look at those exciting and challenging early days, *Strike from the Air* includes approximately 250 photographs, many of which have never been seen before. "A remarkable book that shows just how difficult a start American military aviation endured." –New York Journal of Books

Bird Strike in Aviation Ahmed F. El-Sayed, 2019-05-20 Groundbreaking Handbook Offers Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard Though annual damages from bird and bat collisions with aircraft have been estimated at \$400 million in the United States and up to \$1.2 billion in commercial aviation worldwide and despite numerous conferences and councils dedicated to the issue, very little has been published on this expensive and sometimes-lethal flying risk. *Bird Strike in Aviation* seeks to fill this gap, providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough and comprehensive examination of the subject, Dr. El-Sayed offers different approaches to reducing bird strikes, including detailed coverage of the three categories necessary for such reduction, namely, awareness/education, bird management (active and passive control), and aircraft design. In addition, the text discusses the importance of cooperation between airplanes, airports and air traffic authorities as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include: Statistics and analyses for bird strikes with both civil and military helicopters as well as military fixed wing aircrafts, including annual costs, critical flight altitudes, critical parts of aircraft, distance from air base and specifics of date and timing Thorough review and analysis all fatal bird strike accidents and most non-fatal accidents since 1905, the first book to provide such a reference The use of numerical methods in analyzing historic data (ex. probability functions, finite element methods for analyzing impact on aircraft structure, experimental measurement technique for displacement, vibration, component distortion, etc.) Instruction on identification of bird species (using visual, microscopic, and DNA evidence) and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision With its wealth of statistical data, innovative research, and practical suggestions, *Bird Strike in Aviation* will prove a vital resource for researchers, engineers and graduate students in aerospace engineering/manufacturing or ornithology, as well as for military and civilian pilots and flight crew or professionals in aviation authorities and air traffic control.

First Strike Douglas Terman, 1980 At an underground factory in Siberia, the Russians have made a replica of a U.S. Navy warhead. Soviet military planners review their ability to survive all-out nuclear war. The KGB selects as its target for high-level political subversion a vulnerable U.S. senator with presidential ambitions.

Kansas City B-25 Factory John Fredrickson, John Roper, 2014-05-05 An industrial miracle took place at the Fairfax Airport, on the shores of the Missouri River, between 1941 and 1945. A massive factory was quickly built and a large modification center was soon added. At its peak, over 24,000 greater Kansas City area residents were employed by North American Aviation, Inc. Their goal was to build as many twin-engine B-25 Mitchell medium bombers for wartime service as possible. Their success was the construction of an unprecedented 6,608 aircraft. The B-25 Mitchell served with distinction in every theater of World War II, and significant numbers of them were provided to Allied nations. Many B-25s have been preserved, and some of them remain airworthy today. They can be seen on static display or in flight at air shows all across America.

Setting the Rising Sun Kevin A. Mahoney, 2019-04-01 By the summer of 1945, Adm. Bull Halsey's U.S. Third Fleet had fought its way far enough in the Pacific that its carrier-based fighters could launch attacks on Japan itself in preparation for the invasion of the home islands, planned for the fall of 1945. This mission U.S. Navy fighters, fighter-bombers, dive-bombers, and torpedo-bombers—Hellcats, Avengers, Helldivers, and more—carried out with a vengeance, striking airfields, industrial targets, and coastal facilities while flying into the teeth of Japanese air defenses. Meanwhile, the fleet's aircraft continued to attack the Japanese navy (sinking a submarine from the air, attacking—but not sinking—the famous battleship Nagato, and attacking other ships), interdict enemy merchant shipping, and defend against kamikaze attacks on Third Fleet. As late as the morning of August 15—the day the ceasefire took effect (before the formal signing on September 2)—the fighters saw hard fighting, downing Japanese fighters making last-ditch, almost literally last-minute attacks on the U.S. fleet. Numerous books have covered the American bomber war against Japan in World War II, from the Doolittle Raid to Curtis Lemay's strategic bombing campaign, the firebombing of Tokyo, and the dropping of the atomic bombs. But other than memoirs and bit parts in air war histories, fighter and fighter-bomber operations have received short shrift. *Setting the Rising Sun* corrects that oversight, zooming in on fighters during the war's final two months. In this carefully researched narrative history, Kevin Mahoney recounts this vital period of

the Pacific War with drama and attention to detail. He draws on both American and Japanese perspectives to reconstruct intense combat missions and place them in the context of a war that was hurtling toward its conclusion in two mushroom clouds in Japan.

I-400 Henry Sakaida,Gary Nila,Koji Takaki,2010-12-13 The I-400 submarine was one of the most monstrous creations to emerge from World War II and, in its time, it was the largest submarine ever built. At more than 400 feet long, weighing 5,223 tons submerged, carrying a crew of nearly 200 and possessing a range of over 30,000 nautical miles, the I-400 featured state-of-the-art Japanese radar and 'stealth' technology and carried three Aichi M6A Seiran attack floatplanes in a water-tight tube-like hangar built onto the deck forward of and under its massive conning tower. In mid-1944 this secret weapon was tasked with attacking American cities and destroying the Panama Canal. The extraordinary story of this submarine is told using first-hand accounts from three of the original air crew assigned to fly the Seirans and former officers and crew of the I-400 as well as American naval personnel who crewed the vessel on its dramatic final voyage. Hundreds of remarkable photographs show external and internal views of the I-400, its hangar, aircraft, armament and equipment, and form a unique reference source for enthusiasts of World War II aviation and naval history.

Wings of Gold Gerald Astor,2007-12-18 From critically acclaimed military historian Gerald Astor comes *Wings of Gold*, the first account of how the airplane transformed the U.S. Navy and paved the way to victory in the Pacific in World War II. Astor tracks that fateful journey from its humble beginnings in 1910 when Eugene Ely flew the very first plane off the deck of a U.S. Navy ship to the unprecedented air combat missions that helped defeat the Japanese. Few naval aviators in World War II realized that when they earned their wings of gold they were about to become test pilots for a whole new kind of combat. In their own words, these courageous fliers describe the life-and-death air battles that defined the revolution in naval strategy that rose from the ashes of Pearl Harbor, when fighter pilots watched in horror as Japanese carrier-launched aircraft bombed their planes and airfields into smoking rubble. While following the pilots' firsthand reports of air strikes and blazing dogfights across the islands and atolls of the Pacific, Astor explores the ways the U.S. Navy began its momentous transformation before the war. Later, the critical role of aircraft carriers in the stunning U.S. victory at Midway sounded the death knell for conventional naval warfare, yet the public, the press, the Army, and even the president's advisors refused to recognize the new reality. In fact, only a few in the Navy understood that a new era had begun that would change the face of war forever. The young Americans who fought the deadly duels against Imperial Japanese forces high over the Pacific gave everything they had to the war effort, and many made the supreme sacrifice. *Wings of Gold* pays tribute to their courage, daring, and selfless dedication. Vividly told, thoroughly researched, and filled with stirring accounts of the Pacific War's greatest air battles, *Wings of Gold* is an important addition to the annals of World War II aerial combat.

First Strike Jack Cashill,James Sanders,2003-03-03 September 11, 2001, did not represent the first aerial assault against the American mainland. The first came on July 17,1996, with the downing of TWA Flight 800. This book looks in detail at what people saw and heard on this fateful night. *First Strike* explains how a determined corps of ordinary citizens worked to reveal the compromise and corruption that tainted the federal investigation. With an impressive array of facts, Jack Cashill and James Sanders show the relationship between events in July 1996 and September 2001 and proclaim how and why the American government has attempted to cover up the truth.

The Doolittle Raid John Grehan,2020-03-30 On 1 April 1942, less than four months after the world had been stunned by the attack upon Pearl Harbor, sixteen US aircraft took to the skies to exact retribution. Their objective was not merely to attack Japan, but to bomb its capital. The people of Tokyo, who had been told that their city was 'invulnerable' from the air, would be bombed and strafed – and the shock waves from the raid would extend far beyond the explosions of the bombs. The raid had first been suggested in January 1942 as the US was still reeling from Japan's preemptive strike against the US Pacific Fleet at Pearl Harbor. The Americans were determined to fight back and fight back as quickly as possible. The 17th Bomb Group (Medium) was chosen to provide the volunteers who would crew the sixteen specially modified North American B-25 bombers. As it was not possible to reach Tokyo from any US land bases, the bombers would have to fly from aircraft carriers, but it was impossible for such large aircraft to land on a carrier; the men had to volunteer for a one-way ticket. Led by Lieutenant Colonel 'Jimmy' Doolittle, the seventy-one officers and 130 enlisted men embarked on the USS Hornet which was shielded by a large naval task force. However, the ships were spotted by a Japanese ship. The decision was therefore made to take-off before word of the task force's approach reached Tokyo, even though the carrier was 170 miles further away from Japan than planned and in the knowledge that the B-25s would not have enough fuel to reach their intended landing places in China. The raid was successful, and the Japanese were savagely jolted out of their complacency. Fifteen of the aircraft crash-landed in, or their crews baled-out over, China; the sixteenth managed to reach the Soviet Union. Only three men were killed on the raid, with a further eight being taken prisoner by the Japanese, three of whom were executed and one died of

disease. The full story of this remarkable operation, of the men and machines involved, is explored through this fascinating collection of images.

In addition to the summary analysis for 1990 through 2003, a sample of significant wildlife strikes to civil aircraft in the USA during 2003 is presented at the end of the report. These strike examples demonstrate the widespread and diverse nature of the problem.
