**David T. Coopman**

The Airport City Hobart McKinley Conway,1980

From Airport to Airport City Güller Güller (Firm),Mathis Güller,2003

Presents a vision of the influence of airports in rearranging landside traffic networks and in reorganising the territory of the metropolitan area. This work develops a framework for airport planning, one that allows for participation in the shaping of this highly dynamic motor of urban development.

Quad City International Airport David T. Coopman,2011 In 1922, three men were so captivated with flying they leased 30 acres of cow pasture south of Moline to serve as a landing field. Other early aviators and barnstormers began using Franing Field, and it soon became known as Moline Airport. The field hosted the Ford Reliability Tour four times, served as part of the original New York to Dallas airmail route, had passenger service as early as 1927, became one of Illinois's largest Works Progress Administration projects, weathered financial struggles and a battle with neighboring Davenport, Iowa, over which community would possess the area's commercial

airport, and has enjoyed constant growth and updates for both airline and general aviation traffic. This collection of historical photographs and images will present the people, planes, events, and development of that former pastureland into today's modern Quad City International Airport, the third largest airport for passenger traffic in the state of Illinois.

**Developing Airport Systems in Asian Cities** Asian Development Bank, 2022-12-01 Asia's emerging and growing megacities are expected to handle a large volume of air traffic flows for regional, national, and local economic development in wider production networks. In some phases of development, major capital investments to improve airport capacity and accessibility within megacities are required. This report reviews urban policies on airport development and investment in airport infrastructure in Asian megacities, analyzes the influence of airport system development on spatial transformation of megacities, and offers policy options to promote economic competitiveness of growing and emerging megacities.

*The Metropolitan Airport* Nicholas Dagen Bloom, 2015-08-18 John F. Kennedy International Airport is one of New York City's most successful and influential redevelopment projects. Built and defined by outsize

personalities—Mayor Fiorello La Guardia, famed urban planner Robert Moses, and Port Authority Executive Director Austin Tobin among them—JFK was fantastically expensive and unprecedented in its scale. By the late 1940s, once-polluted marshlands had become home to one of the world's busiest and most advanced airfields. Almost from the start, however, environmental activists in surrounding neighborhoods and suburbs clashed with the Port Authority. These fierce battles in the long term restricted growth and, compounded by lackluster management and planning, diminished JFK's status and reputation. Yet the airport remained a key contributor to metropolitan vitality: New Yorkers bound for adventure and business still boarded planes headed to distant corners of the globe, billions of tourists and immigrants came and went, and mammoth air cargo facilities bolstered the region's commerce. In *The Metropolitan Airport*, Nicholas Dagen Bloom chronicles the untold story of JFK International's complicated and turbulent relationship with the New York City metropolitan region. In spite of its reputation for snarled traffic, epic delays, endless construction, and abrasive employees, the airport was a key player in shifting patterns of labor, transportation, and residence; the airport both encouraged and benefited from the dispersion of population and economic activity to the outer boroughs and suburbs. As Bloom shows, airports like JFK are vibrant parts of their cities and powerfully influence urban development. *The Metropolitan Airport* is an indispensable book for those who wish to understand the revolutionary impact

of airports on the modern American city.

*Semiannual Report to the Congress* United States. Department of Transportation. Office of Inspector General, 1981-10

*Airports, Cities and Regions* Sven Conventz, Alain Thierstein, 2014-08-27  
Since the emergence of urban systems, cities have developed in a mutually inter-dependent process of socio-economic dynamics and transportation linkages. In recent years, Airports worldwide have stepped beyond the stage of being pure infrastructure facilities while the complex dynamics that are taking place at and around international airports represent a crucial element in the post-industrial reorganisation of urban and regional systems. Airports are increasingly recognized as general urban activity centres; that is, key assets for cities and regions as economic generators and catalysts of investment in addition to being critical components of efficient city infrastructure. This book brings together contributions from renowned academic scholars and world leading practitioners to discuss insights gained from theory and practice. The first collection of papers reflects upon the general role and future of airports as well as their specific contribution to competitive advantages within a fast changing business and economic landscape. The second group of contributions ask about the role airports play within the innovation process that is inherently centred on generating and sharing knowledge. The third section of papers investigates the drivers of real estate developments on airport land and in the close vicinity of

airports.

*The Routledge Companion to Air Transport Management* Nigel Halpern, Anne Graham, 2018-01-31 The Routledge Companion to Air Transport Management provides a comprehensive, up-to-date review of air transport management research and literature. This exciting new handbook provides a unique repository of current knowledge and critical debate with an international focus, considering both developed and emerging markets, and covering key sectors of the air transport industry. The companion consists of 25 chapters that are written by 39 leading researchers, scholars and industry experts based at universities, research institutes, and air transport companies and organisations in 12 different countries in Africa, Asia-Pacific, Europe and North America to provide a definitive, trustworthy resource. The international team of contributors have proven experience of research and publication in their specialist areas, and contribute to this companion by drawing upon research published mainly in academic, industry and government

sources. This seminal companion is a vital resource for researchers, scholars and students of air transport management. It is organised into three parts: current state of the air transport sectors (Part I); application of management disciplines to airlines and airports (Part II); and key selected themes (Part III).
