101 Pat-Downs Malvini Redden Shawna Malvini Redden,2021-06 Two million people fly commercially every day in the United States, and every single passenger must interact with members of airport security. Why do travelers put up with long lines and invasive screenings? Why do Transportation Security Administration officers (TSOs) put up with the disrespect and anger directed at them? Shawna Malvini Redden asked these questions for years--interviewing passenger and security officers alike, taking note of everything from carry-on bananas to passengers who fumed when their water bottles were confiscated. Malvini Redden encountered a range of passengers: the entitled business travelers; the parents with toddlers; the hot mess, travels-once-a-year, can't-figure-out-how-to-get-through-the-security-checkpoint-without-crying flier. The answers, Malvini Redden admitted, were far more complex than she anticipated. 101 Pat-Downs is the story of Malvini Redden's research journey, part confessional, part investigative research, and part light-hearted social commentary. In it she illuminates common experiences in airport security checkpoints specifically focused on emotion and identity, presenting the inside scoop on airport security interactions via her experiences and those of passengers and TSOs. Along the way Malvini Redden introduces common characters of airport security, humanizing the stereotypically gruff TSO and explaining in a social-science framework why so many passengers feel nervous inside TSA checkpoints. Ultimately, Malvini Redden shows how people navigate communication in complex interpersonal situations and offers research-driven suggestions for improving interactions for passengers and TSOs alike.

The Transparent Traveler Rachel Hall,2015-09-04 At the airport we line up, remove our shoes, empty our pockets, and hold still for three seconds in the body scanner. Deemed safe, we put ourselves back together and are free to buy the beverage we were prohibited from taking through security. In *The Transparent Traveler* Rachel Hall explains how the familiar routines of airport security choreograph passenger behavior to create submissive and docile travelers. The cultural performance of contemporary security practices mobilizes what Hall calls the aesthetics of transparency. To appear transparent, a passenger must perform innocence and display a willingness to open their body to routine inspection and analysis. Those who cannot--whether because of race, immigration and citizenship status, disability, age, or religion--are deemed opaque, presumed to be a threat, and subject to search and detention. Analyzing everything from airport architecture, photography, and computer-generated imagery to full-body scanners and TSA behavior detection techniques, Hall theorizes the transparent traveler as the embodiment of a cultural ideal of submission to surveillance.

Airport Security Dr. Stacey L. Tyler, 2017-05-09 Airport Security by Dr. Stacey L. Tyler Airport Security: Passenger Screening and Governance Post 9/11 provides knowledge of governance, terrorism, security, and democratic principles in the passenger screening processes by the Department of Homeland Security, Transportation Security Administration, and air carriers. This book identifies the inadequate security measure designs, resulting from legislation, implemented by the Transportation Security Administration (TSA), and the Department of Homeland Security (DHS). These security measures impose risk to our passengers daily as their principle provider of airport screening services. The author has over 20 years of professional experience in the airline industry. She started as a Ticketing Agent and progressed to General Manager for various airlines and vendor services. The truth is, despite current best practices and policies, dangerous items, and contraband continue to find its way past the screening areas of many airports and into secure areas. As a New Jersey Women Owned Small Business and Women-Owned Minority Business entrepreneur, The Interactive Intelligence Corporation is dedicated to assisting policy makers, administrators, and airport and airline management with examining and preventing the exploitation of weaknesses in the current system, increasing the efficiency and effectiveness in identifying and responding to emerging threats, and producing greater public satisfaction.

Handbook of Checked Baggage Screening Norman E. L. Shanks, Alexandre L. W. Bradley, 2005-08-19 Handbook of Checked Baggage Screening – Advanced Airport Security Operation is a practical guide for project managers and designers embarking on hold-baggage screening developments within the airport environment for the first time. The book clearly explains away any uncertainty about the processes and procedures to be used by the various parties involved within the industry and sets out ‘best practice’ with respect to checked baggage screening design. Valuable lessons can be learned from actual case studies contributed by leading equipment manufacturers on recent 100% hold baggage screening projects. In addition to the all-important security screening of baggage and passengers the book also looks at the following areas associated with airport security, through the use of a detailed structured security check-list evaluation questionnaire. The questionnaire allows airports to assess the state of readiness of their airports and then, using the other chapters, gain an insight regarding which technology will best solve any security gaps. The authors offer a unique perspective through their background and experience. Many of the checked baggage screening procedures and equipment discussed in the book have already been implemented in the UK, with the authors responsible for leading this effort. The combined experience they can offer to the industry world wide is invaluable.

Airline Passenger Security Screening National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Commission on Engineering and Technical Systems, Panel on Passenger Screening, Committee on Commercial Aviation Security, 1996-07-19 This book addresses new technologies being considered by the Federal Aviation Administration (FAA) for screening airport passengers for concealed weapons and explosives. The FAA is supporting the development of promising new technologies that can reveal the presence not only of metal-based weapons as with current screening technologies, but also detect plastic explosives and other non-metallic threat materials and objects, and is concerned that these new technologies may not be appropriate for use in airports for other than technical reasons. This book presents discussion of the health, legal, and public acceptance issues that are likely to be raised regarding implementation of improvements in the current electromagnetic screening technologies, implementation of screening systems that detect traces of explosive materials on passengers, and implementation of systems that generate images of passengers beneath their clothes for analysis by human screeners.

Airport Passenger Screening Using Backscatter X-Ray Machines National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Division on Engineering and Physical Sciences,National Materials and Manufacturing Board,Committee on Airport Passenger Screening: Backscatter X-Ray Machines,2016-01-10 Passenger screening at commercial airports in the United States has gone through significant changes since the events of September 11, 2001. In response to increased concern over terrorist attacks on aircrafts, the Transportation Security Administration (TSA) has deployed security systems of advanced imaging technology (AIT) to screen passengers at airports. To date (December 2014), TSA has deployed AITs in U.S. airports of two different technologies that use different types of radiation to detect threats: millimeter wave and X-ray backscatter AIT systems. X-ray backscatter AITs were deployed in U.S. airports in 2008 and subsequently removed from all airports by June 2013 due to privacy concerns. TSA is looking to deploy a second-generation X-ray backscatter AIT equipped with privacy software to eliminate production of an image of the person being screened in order to alleviate these concerns. This report reviews previous studies as well as current processes used by the Department of Homeland Security and equipment manufacturers to estimate radiation exposures resulting from backscatter X-ray advanced imaging technology system use in screening air travelers. Airport Passenger Screening Using Backscatter X-Ray Machines examines whether exposures comply with applicable health and safety standards for public and occupational exposures to ionizing radiation and whether system design, operating procedures, and maintenance procedures are appropriate to prevent over exposures of travelers and operators to ionizing radiation. This study aims to address concerns about exposure to radiation from X-ray backscatter AITs raised by Congress, individuals within the scientific community, and others.
