Soft Computing for Data Mining Applications K. R. Venugopal, K. G. Srinivasa, L. M. Patnaik, 2009-02-24 The authors have consolidated their research work in this volume titled Soft Computing for Data Mining Applications. The monograph gives an insight into the research in the fields of Data Mining in combination with Soft Computing methodologies. In these days, the data continues to grow - potentially. Much of the data is implicitly or explicitly imprecise. Database discovery seeks to discover noteworthy, unrecognized associations between the data items in the existing database. The potential of discovery comes from the realization that alternate contexts may reveal additional valuable information. The rate at which the data is stored is growing at a phenomenal rate. As a result, traditional ad hoc mixtures of statistical techniques and data management tools are no longer adequate for analyzing this vast collection of data. Several domains where large volumes of data are stored in centralized or distributed databases include applications like e-commerce, bio-informatics, computer security, Web intelligence, intelligent learning database systems, finance, marketing, healthcare, telecommunications, and other fields. Efficient tools and algorithms for knowledge discovery in large data sets have been devised during the recent years. These methods exploit the capability of computers to search huge amounts of data in a fast and effective manner. However, the data to be analyzed is imprecise and affected with uncertainty. In the case of heterogeneous data sources such as text and video, the data might moreover be ambiguous and partly conflicting. Besides, patterns and relationships of interest are usually approximate. Thus, in order to make the information mining process more robust it requires tolerance toward imprecision, uncertainty and exceptions.

Network Data Analytics K. G. Srinivasa, Siddesh G. M., Srinidhi H., 2018-04-26 In order to carry out data analytics, we need powerful and flexible computing software. However the software available for data analytics is often proprietary and can be expensive. This book reviews Apache tools, which are open source and easy to use. After providing an overview of the background of data analytics, covering the different types of analysis and the basics of using Hadoop as a tool, it focuses on

different Hadoop ecosystem tools, like Apache Flume, Apache Spark, Apache Storm, Apache Hive, R, and Python, which can be used for different types of analysis. It then examines the different machine learning techniques that are useful for data analytics, and how to visualize data with different graphs and charts. Presenting data analytics from a practice-oriented viewpoint, the book discusses useful tools and approaches for data analytics, supported by concrete code examples. The book is a valuable reference resource for graduate students and professionals in related fields, and is also of interest to general readers with an understanding of data analytics.

Student Engagement in the Digital University Lesley Gourlay, Martin Oliver, 2018-02-02 Student Engagement in the Digital University challenges mainstream conceptions and assumptions about students' engagement with digital resources in Higher Education. While engagement in online learning environments is often reduced to sets of transferable skills or typological categories, the authors propose that these experiences must be understood as embodied, socially situated, and taking place in complex networks of human and nonhuman actors. Using empirical data from a JISC-funded project on digital literacies, this book performs a sociomaterial analysis of student-technology interactions, complicating the optimistic and utopian narratives surrounding technology and education today and positing far-reaching implications for research, policy and practice.

Preparing Teachers to Teach with Technology Charalambos Vrasidas, Gene V Glass, 2005-06-01 Teacher preparation programs in the United States and around the world have finally begun to address this deficiency in their programs. The realization that technology is a powerful driving force in education coupled with a renewed emphasis on teacher preparation by governments have resulted in some dramatic changes in teacher preparation programs. I believe that we have just begun to see changes in teacher preparation and that the pace of change will continue to accelerate. This volume covers some of the more exciting developments in the field, including the emergence of wireless computing in the classroom and the preparation of teachers in an online environment. In short, I am optimistic. For those of you who are also in the field, I think you will agree. For those who are just entering the field, this book is a great place to start as you change education. Finally, while this book is the last book of the three part series that we at CAIT conceptualized with Charalambos Vrasidas and Gene Glass, it is also the beginning of a new relationship. We are excited to join with a new partner, CARDET, to present this book. Over many years in the education and R&D field, I have come to realize the value of partnerships and relationships. I want to thank both Charalambos and Gene for making this series a reality and such a success. We are looking forward to working with them and CARDET in the near future.

Education in Cyberspace Sian Bayne, Ray Land, 2013-05-13 The use of online learning environments is now widespread, and there is a wealth of literature providing practical advice on how to teach online, develop courses and ensure effective pedagogical practice. What has been frequently overlooked is the insight offered by cyberspace theory, which considers broader social, cultural and theoretical contexts within which new technologies and learning models are situated. This book provides a fresh perspective on current thinking in e-learning. It challenges orthodox assumptions about the role of technology in the teaching and learning of the future, and explores more varied and wider-reaching conceptual frameworks for learning in cyberspace. Featuring the contributions of respected and experienced experts with a wide range of perspectives, *Education in Cyberspace* will be valued by anyone closely involved in the theory of e-learning and education.

Handbook of Research on New Literacies Julie Coiro, Michele Knobel, Colin Lankshear, Donald J. Leu, 2014-04-04 Situated at the intersection of two of the most important areas in educational research today — literacy and technology — this handbook draws on the potential of each while carving out important new territory. It provides leadership for this newly emerging field, directing scholars to the major issues, theoretical perspectives, and interdisciplinary research pertaining to new literacies. Reviews of research are organized into six sections: Methodologies Knowledge and Inquiry Communication Popular Culture, Community, and Citizenship: Everyday Literacies Instructional Practices and Assessment Multiple Perspectives on New Literacies Research FEATURES Brings together a diverse international team of editors and chapter authors Provides an extensive collection

of research reviews in a critical area of educational research Makes visible the multiple perspectives and theoretical frames that currently drive work in new literacies Establishes important space for the emerging field of new literacies research Includes a unique Commentary section: The final section of the Handbook reprints five central research studies. Each is reviewed by two prominent researchers from their individual, and different, theoretical position. This provides the field with a sense of how diverse lenses can be brought to bear on research as well as the benefits that accrue from doing so. It also provides models of critical review for new scholars and demonstrates how one might bring multiple perspectives to the study of an area as complex as new literacies research. The Handbook of Research on New Literacies is intended for the literacy research community, broadly conceived, including scholars and students from the traditional reading and writing research communities in education and educational psychology as well as those from information science, cognitive science, psychology, sociolinguistics, computer mediated communication, and other related areas that find literacy to be an important area of investigation.

Is Technology Good for Education? Neil Selwyn,2016-06-07 Digital technologies are a key feature of contemporary education. Schools, colleges and universities operate along high-tech lines, while alternate forms of online education have emerged to challenge the dominance of traditional institutions. According to many experts, the rapid digitization of education over the past ten years has undoubtedly been a 'good thing'. *Is Technology Good For Education?* offers a critical counterpoint to this received wisdom, challenging some of the central ways in which digital technology is presumed to be positively affecting education. Instead Neil Selwyn considers what is being lost as digital technologies become ever more integral to education provision and engagement. Crucially, he questions the values, agendas and interests that stand to gain most from the rise of digital education. This concise, up-to-the-minute analysis concludes by considering alternate approaches that might be capable of rescuing and perhaps revitalizing the ideals of public education, while not denying the possibilities of digital technology altogether.

GUI Design Shan ben tu shu,2015 As technology has rapidly advanced, so too has the way we use and interact with it. Gone are the days of flat black backgrounds dotted with blocky green text; now, users expect a massive range of colors, layouts, and fonts to be used to entertain and assist them in their daily lives. *GUI Design* assembles the best of recent graphic user interface for a collection that provides practical encouragement for those new to the world as well as inspiration for experienced designers. The book gathers Twitters Vine video creation app for Windows phones, the vulgar-

yetamusing Authentic Weather app, an application designed to help tourists follow the physical and ideological path of the Iron Curtain, and more to showcase programs that balance information flow with user experiences and highlight the creativity, inspiration, and expressive techniques used in their design. The projects within demonstrate the increasingly significant role of user interfaces in both design and our everyday lives in the modern world.

Emerging Approaches to Educational Research Tara Fenwick, Richard Edwards, Peter Sawchuk, 2015-04-08 The last fifteen years have seen much conceptual and methodological innovation in research on education and learning across the lifecourse, bringing both fresh insights and new dilemmas. This innovation was initially fuelled by the growing influence of conceptual framings often named as either post-structural or postmodern. The works of Foucault, Derrida and Lyotard have variously found their way into the canons of educational research, and in more recent years, the influence of the work of Deleuze and Guattari has also grown. This work has proved controversial both in the challenges it has raised for the purposes and practices of education and training but also over the assumptions underpinning such work. As part of and also in response to the influence of post-structuralism and postmodernism in the social sciences, there have emerged and developed a further range of conceptual and methodological framings which are more relational, system and practice-focussed. Several of these framings work with a non-linear understanding of causality and embrace unpredictability in the world and undecidability in our understanding of it. They also challenge any notion of a strong boundary between the social and natural sciences. This book explores the most significant four of these framings, how they are being taken up in research in education and learning across the lifecourse, as well as their possibilities and limitations: complexity science cultural historical activity theory (CHAT) actor-network theory (ANT) spatiality theories. Illustrated throughout with examples drawn from educational contexts across the life courses, including schooling, post-compulsory education and training, educational policy, workplace and community-based education in North America, the UK, and Australia this vital guide to understanding fresh ways of conducting and understanding educational research will prove essential reading for everyone undertaking educational research in the modern world.

Points of Viewing Children's Thinking Ricki Goldman-Segall, Ricki Goldman, 2014-04-08 This book is about learning and ethnography in the context of technologies. Simultaneously, it portrays young people's thinking attitudes in computer-based learning environments, and it describes how the practice of ethnography is changing in a digital world. The author likens this form of interaction to the double helix, where learning and ethnography are intertwined to tell an emergent story about partnerships with technology. Two school computer cultures were videotaped for this study. Separated not only by geography -- one school is on the east coast of New England and the other on the west coast of British Columbia on Vancouver Island -- they are also separated in other ways: ethnic make-up and inner-city vs. rural settings to name only two. Yet these two schools are joined by a strong thread: a change in their respective cultures with the advent of intensive computer-use on the part of the students. Both school communities have watched their young people gain literacy and competence, and their tools have changed from pen to computer, video camera, multimedia and the Internet. Perhaps most striking is that the way they think of themselves as learners has also changed: they see themselves as an active participant, in the pilot's seat or director's chair, as they chart new connections between diverse and often unpredictable worlds of knowledge.

Applied Pedagogies for Higher Education Dawn A. Morley, Md Golam Jamil, 2020-11-05 This open access book critiques real world learning across both the curriculum and extracurricular activities. Drawing on disciplines as diverse as business, health, fashion, sociology and geography, the editors and authors employ a cross-disciplinary approach to examine how this concept is being applied in higher education. Divided into three parts, the authors and contributors analyse broader applications of real world learning, student experience of practicing in a real world setting, and how learning strategies can be employed to engage students in real world learning. The editors and contributors provide up-to-date, cross-disciplinary and international insights into how real world learning could be integrated into the higher education curriculum to support effective, relevant and life-long learning for
