Reading Sounds Sean Zdenek, 2015-12-23 The work of writing closed captions for television and DVD is not simply transcribing dialogue, as one might assume at first, but consists largely of making rhetorical choices. For Sean Zdenek, when captioners describe a sound they are interpreting and creating contexts, they are assigning significance, they are creating meaning that doesn't necessarily exist in the soundtrack or the script. And in nine chapters he analyzes the numerous complex rhetorical choices captioners make, from abbreviating dialogue so it will fit on the screen and keep pace with the editing, to whether and how to describe background sounds, accents, or slurred speech, to nonlinguistic forms of sound communication such as sighing, screaming, or laughing, to describing music, captioned silences (as when a continuous noise suddenly stops), and sarcasm, surprise, and other forms of meaning associated with vocal tone. Throughout, he also looks at closed captioning style manuals and draws on interviews with professional captioners and hearing-impaired viewers. Threading through all this is the novel argument that closed captions can be viewed as texts worthy of rhetorical analysis and that this analysis can lead the entertainment industry to better standards and practices for closed captioning, thereby better serve the needs of hearing-impaired viewers. The author also looks ahead to the work yet to be done in bringing better captioning practices to videos on the Internet, where captioning can take on additional functions such as enhancing searchability. While scholarly work has been done on captioning from a legal perspective, from a historical perspective, and from a technical perspective, no one has ever done what Zdenek does here, and the original analytical models he offers are richly interdisciplinary, drawing on work from the fields of technical communication, rhetoric, media studies, and disability studies.

*Home Security* Vivian Capel, 1997-07-22 Every reason now exists to make homes more secure: the crime rate is increasing, insurance companies are insisting on adequate protection, and more householders are improving home security, so criminals are seeking out the easier jobs - one of which could be yours! This book provides practical, independent guidance. It shows how burglars work, and how to thwart them. In a jargon-free way, the selection and installation of alarm systems are described in this practical guide for home-owners.

**Storm Siren** Mary Weber, 2014-08-26 The award-winning novel that started it all. "A riveting tale from start to finish. Between the simmering romance, the rich and inventive fantasy world, and one seriously jaw-dropping finale, readers will clamor for the next book—and I'll be at the front of the line!" —Marissa Meyer, New York Times bestselling author of the Lunar Chronicles In a world at war, a slave girl's lethal curse could become one kingdom's weapon of salvation. If the curse—and the girl—can be controlled. "I raise my chin as the buyers stare. Yes. Look. You don't want me. Because, eventually, accidentally, I will destroy you." As a slave in the war-weary kingdom of Faelen, seventeen-year-old Nym isn't merely devoid of rights, her Elemental kind are only born male and always killed at birth—meaning, she shouldn't even exist. Standing on the auction block beneath smoke-drenched mountains, Nym faces her fifteenth sell. But when her hood is removed and her storm-summoning killing curse

revealed, Nym is snatched up by a court advisor and given a choice: be trained as the weapon Faelen needs to win the war or be killed. Choosing the former, Nym is unleashed into a world of politics, bizarre parties, and rumors of an evil more sinister than she's being prepared to fight . . . not to mention the trainer whose dark secrets lie behind a mysterious ability to calm every lightning strike she summons. But what if she doesn't want to be the weapon they've all been waiting for? Set in a beautifully eclectic world of suspicion, super abilities, and monsters, *Storm Siren* is a story of power. And whoever controls that power will win. "Intense and intriguing. Fans of high stakes fantasy won't be able to put it down." –CJ Redwine, New York Times bestselling author of the Ravenspire series "Mary Weber has created a fascinating, twisted world. *Storm Siren* sucked me in from page one—I couldn't stop reading! This is a definite must-read, the kind of book that kept me up late into the night turning the pages!" –Lindsay Cummings, author of the *Androma Saga* "A riveting read! Mary Weber's rich world and heartbreaking heroine had me from page one. You're going to fall in love with this love story." –Josephine Angelini, internationally bestselling author of the *Starcrossed* trilogy "Elegant prose and intricate world-building twist into a breathless cyclone of a story that will constantly keep you guessing. More please!" –Shannon Messenger, author of the *Sky Fall* series

**Alarm** Alice Bennett,2022-12-15 *Object Lessons* is a series of short, beautifully designed books about the hidden lives of ordinary things. Alarms are alarming. They wake us up, demand our attention and force us to attend to things we've preferred to ignore. But alarms also allow us to feel secure, to sleep and to retreat from alertness. They take over vigilance on our behalf. From the alarm clock and the air-raid siren to the doorbell and the phone alert, the history of alarms is also the history of work, security, technology and emotion. *Alarm* responds to culture's most urgent calls to attention by examining all kinds of alarms, from the restless presence of the alarm clock in modernist art to the siren – the sound of the police – in classic hip hop. More than just bells and whistles, alarms are objects that have defined sleeping and waking, safety and danger, and they have fundamentally shaped our understanding of the mind and its capacity for attention. *Object Lessons* is published in partnership with an essay series in *The Atlantic*.

**Emergency Alert and Warning Systems** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the Future of Emergency Alert and Warning Systems: Research Directions, 2018-05-19 Following a series of natural disasters, including Hurricane Katrina, that revealed shortcomings in the nation's ability to effectively alert populations at risk, Congress passed the Warning, Alert, and Response Network (WARN) Act in 2006. Today, new technologies such as smart phones and social media platforms offer new ways to communicate with the public, and the information ecosystem is much broader, including additional official channels, such as government social media accounts, opt-in short message service (SMS)-based alerting systems, and reverse 911 systems; less official channels, such as main stream media outlets and weather applications on connected devices; and unofficial channels, such as first person reports via social media. Traditional media have also taken advantage of these new tools, including their own mobile applications to extend their reach of beyond broadcast radio, television, and cable. Furthermore, private companies have begun to take advantage of the large amounts of data about users they possess to detect events and provide alerts and warnings and other hazard-related information to their users. More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action. Some, but not all, of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more effective national alert and warning system might be created and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.

**Alarms And Excursions** Michael Frayn, 2017-04-07 Michael Frayn has the rare ability to construct farcical comedy around philosophical principles and the laughs and the ideas effortlessly intermesh (Guardian) Four old friends sit down for a quiet evening together. But they are harassed by various bells, sirens, buzzers, warblers, beepers and cheepers, all trying to warn them of something. What are these electronic voices trying to tell them? Can they understand the mysterious disasters before disaster strikes? It's a race against time - because there are seven more plays and twenty more characters still to come before the evening is through, plus a lot more strange noises - and increasingly desperate calls from eleven separate pay phones...

**Everything You Wanted to Know about the Afterlife but Were Afraid to Ask** Hollister Rand, 2020-05-05 WINNER OF THE 2021 GOLD LIVING NOW AWARD AND THE 2020 SILVER NAUTILUS BOOK AWARD From the world class spiritual medium and author of the "compassionate yet educational" (John Edward, author of Infinite Quest) I'm Not Dead, I'm Different comes an insightful exploration into what it's like on the other side. Is there really an afterlife? Do spirits still feel love for us? What is it like when we cross over? After more than twenty-five years of bringing comfort to tens of thousands of people, Hollister Rand brings her incredible knowledge and experience to this accessible

and comprehensive book that takes you on an eye-opening journey into the afterlife. With warm-hearted sincerity, Rand offers you a clear-eyed and uplifting view into an unknown universe and teaches you how to navigate your life on this earthly plane with eternity in mind. **Wake, Siren** Nina MacLaughlin, 2019-11-19 In fierce, textured voices, the women of Ovid's *Metamorphoses* claim their stories and challenge the power of myth I am the home of this story. After thousands of years of other people's tellings, of all these different bridges, of words gotten wrong, I'll tell it myself. Seductresses and she-monsters, nymphs and demi-goddesses, populate the famous myths of Ovid's *Metamorphoses*. But what happens when the story of the chase comes in the voice of the woman fleeing her rape? When the beloved coolly returns the seducer's gaze? When tales of monstrous transfiguration are sung by those transformed? In voices both mythic and modern, *Wake, Siren* revisits each account of love, loss, rape, revenge, and change. It lays bare the violence that undergirds and lurks in the heart of Ovid's narratives, stories that helped build and perpetuate the distorted portrayal of women across centuries of art and literature. Drawing on the rhythms of epic poetry and alt rock, of everyday speech and folk song, of fireside whisperings and therapy sessions, Nina MacLaughlin, the acclaimed author of *Hammer Head*, recovers what is lost when the stories of women are told and translated by men. She breathes new life into these fraught and well-loved myths.

**Emergency Notification** Robert C. Chandler, 2010-09-21 This text provides critical information to help organizations improve their emergency communications, including the tools, automation technology, and processes of crisis notification. To grasp the importance of emergency notification, imagine this scenario: A shooter is on the loose at a college campus. Chaos reigns. To contain the situation, campus personnel need to communicate immediately and efficiently, not only with the students, faculty, and staff, but also the local police, federal law enforcement, and media. Effective emergency notification makes things right, it allows the right message to reach the right people at the right time—facilitating the right response. *Emergency Notification* explains how. This book offers must-know information for business security, senior management, human resources staff, government policymakers, and emergency planners, examining what, when, how, why, and with whom to communicate during crises. This text also covers risk communication, message mapping, information loading, audience comprehension, and practical issues like testing emergency notification systems.

The book includes chapters on: overall threat types of weapons used by intruders perimeter and inside security where to get professional help how to build a security plan what to know when hiring guards armed versus unarmed guards &

volunteers gun laws mental health issues how to use volunteers effectively to strengthen security information on technology that can strengthen the protection of holy places and their immediate surroundings security for day and overnight camps guidance on how to organize security committees to strengthen security checklists for congregations and camps to use immediately

*Electronics* Owen Bishop, 2002 Owen Bishop's First Course starts with the basics of electricity and component types, and introduces students to practical work almost straight-away. No prior knowledge of electronics is assumed. The approach is student-centred with Test Your Knowledge features to check understanding and numerous Activities suitable for practicals, homeworks and other assignments. Key facts, formulae and definitions are highlighted to aid revision, and theory is backed up by numerous examples throughout the book. Each chapter ends with a set of problems which includes exam-style questions and multiple-choice questions with numerical and multiple-choice answers provided in the back of the book. This text is ideal for a wide range of introductory courses in electronics, technology, physics and engineering. The coverage has also been carefully matched to the latest UK syllabuses, including GCSE Electronics, GCSE Design and Technology, Intermediate GNVQ, Engineering GCSE, and City & Guilds courses. It is also well suited for competence-based courses such as Level 2 NVQs, providing essential knowledge and understanding in a way that is firmly grounded in practical electronics. Owen Bishop's talent for introducing the world of electronics has long been a proven fact with his textbooks, professional introductions and popular circuit construction guides being chosen by thousands of students, lecturers and electronics enthusiasts. A brand new course text written for absolute beginners studying electronics in colleges and schools A wealth of practical work, including simple microcontroller projects Written by one of the world's favourite electronics authors

**Electronics: A First Course** Owen Bishop, 2007-06-07 Owen Bishop's First Course starts with the basics of electricity and component types, and introduces students to practical work almost straightaway. No prior knowledge of electronics is assumed. The approach is student centred with Self-Test features to check understanding, and numerous Activities suitable for practicals, homework and other assignments. New Multiple Choice Questions are incorporated throughout the text to aid student learning. Key facts, formulae and definitions are highlighted to aid revision, and theory is backed up by numerous examples within the book. Sound and Vibrations Gerard Cheshire, 2010 This title introduces the reader to the importance of sound in our daily lives. Find out how sounds are made and detected, learn about some unusual uses of sound, and discover the ways in which sound can be recorded and reproduced. This series is packed with the latest scientific information and is an ideal support for physics students at Key Stage 3 level. The series will also be of interest to older students. Fascinating feature boxes outline recent physics research and encourage the reader to look more closely at the world in which they live. Key concepts are brought to life with full color illustrations and mini quizzes help to reinforce new ideas.

**Intelligent Computing Theories and Application** De-Shuang Huang, Vitoantonio Bevilacqua, Abir Hussain, 2020-10-13 This two-volume set of LNCS 12463 and LNCS 12464 constitutes - in conjunction with the volume LNAI 12465 - the refereed proceedings of the 16th International Conference on Intelligent Computing, ICIC 2020, held in Bari, Italy, in October 2020. The 162 full papers of the three proceedings volumes were carefully reviewed and selected from 457 submissions. The ICIC theme unifies the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. The theme for this conference is "Advanced Intelligent Computing Methodologies and Applications." Papers related to this theme are especially solicited, addressing theories, methodologies, and applications in science and technology.
