Sounds Are Not Scary Kristin Sims,2015-09-15 For a child with sound sensitivity, everyday things can be terrifying. Alarm clocks, fire alarms, and tornado sirens, just to name a few, are startling and may cause a child to freeze in panic or break down in tears. Sound sensitivity is common in many children, and may be more prominent in children with ADHD, Autism, Asperger's Syndrome, Cerebral Palsy, Bell's Palsy, or even chronic ear infections. Helping a child to understand what makes these noises and why they are useful might be a healthy step in overcoming these fears.

**An Infestation in Spanner** Troy Massie,2012-11-30 The beautiful gorge in Spanner, Ohio has always been a great place to visit and a refreshing part of everyday life for Spanner residents. One spring, though, abnormally large cricket eggs begin to surface at the bottom of the gorge. Two twenty-year-old friends are the first to discover the eggs and use their curiosity to take a sample of some of the eggs and take care of them until they hatch. Once the eggs do hatch, the creatures that come out of them are much larger and more aggressive than normal crickets. As hundreds of the crickets hatch they become larger and more monstrous by the second. It soon becomes clear to all of the residents of Spanner that an infestation of epic proportions is at hand. The quick-witted and lucky ones are able to escape Spanner and get as far away as possible from the deadly creatures while the others are trapped in their homes and other buildings in the town. As the crickets begin to close in on the buildings, realizing their prey is trapped inside, everyone has to do what they can to help each other and survive.

**Human Factors in Auditory Warnings** Judy Edworthy,Neville A. Stanton,2019-01-15 First published in 1999, this book provides answers to many of the problems associated with the design and application of auditory warnings. It represents the position of contemporary auditory warnings research and development in a single unique volume. Application domains include air traffic control, aviation, emergency services, manufacturing, medicine, military and nuclear power. The contributors constitute many key experts in this area, some of whom are psychoacousticians, some psychologists and some ergonomists. Correspondingly, the chapters range from those covering basic topics such as audibility and localization of warnings, through psychological issues concerned with the relationship between design, understanding and the behavioural response, to the more general ergonomic issues of implementing the warnings in a particular context. Although each of the chapters takes a slightly different perspective, they all balance theoretical underpinning with practical application. The editors have undertaken to draw all of the contributions together by providing an overview of warnings research at the beginning of the book and summary of the contributions at the end. This book will appeal to all involved in the research, development, design and implementation of auditory warnings.
