The Alchemy of the Heavens Ken Croswell,1996-02-01 The Alchemy Of The Heavens offers an exciting and accessible survey of what we know about our galaxy. The home of the earth, the sun, and countless other stars, the Milky Way has long been an object of human fascination, but it's been in the last forty years that astrononers and astrophysicists have made the most startling discoveries about our galaxy. Author Ken Croswell reveals that the Milky Way formed as many earlier galaxies collopsed and smashed together; that may of the elements in the galaxy--including the iron and carbon that course through our bodies--were born in exploding supernovae; that in all likelihood there is a massive black hole at the center of the galaxy, with a million times more mass than the sun, and that the Milky Way's oldest stars preserve the elements created in the big bang, thereby serving as fossils of the universe's earliest days. A captivating journey through the modern astronomy of the Milky Way, Croswell shows us how a deeper understanding of the nature and working of the galaxy can offer larger clues into the origins of the universe itself.

Universis Patrick Cusick,2013-11-18 The universe revealed like never before. Science speculates about the existence of a Great Unified Theory that joins everything together. Big bangs, the edge of existence, life on planets and the rise of universal beings... mind-blowing stuff that makes fascinating reading. This is important new knowledge that explains how universal nature is shaping the material world by pulling the future into the present time. Universis exposes the universality of collective co-existence that changes forever how people live and see the living universe.

Alchemy in Contemporary Art Urszula Szulakowska,2017-07-05 Alchemy in Contemporary Art analyzes the manner in which twentieth-century artists, beginning with French Surrealists of the 1920s, have appropriated concepts and imagery from the western alchemical tradition. This study examines artistic production from c. 1920 to the present, with an emphasis on the 1970s to 2000, discussing familiar names such as Andre Breton, Salvador Dali, Yves Klein, Joseph Beuys, and Anselm Kiefer, as well as many little known artists of the later twentieth century. It provides a critical overview of the alchemical tradition in twentieth-century art, and of the use of occultist imagery as a code for political discourse and polemical engagement. The study is the first to examine the influence of alchemy and the Surrealist tradition on Australian as well as on Eastern European and Mexican art. In addition, the text considers the manner in which women artists such as Leonora Carrington, Remedios Varo, and Rebecca Horn have critically revised the traditional sexist imagery of alchemy and occultism for their own feminist purposes.

Lost Discoveries Dick Teresi,2010-05-11 *A New York Times Notable Book* Boldly challenging conventional wisdom, acclaimed science writer and Omni magazine cofounder Dick Teresi traces the origins of contemporary science back to their ancient roots in this eye-opening and landmark work. This innovative history proves once and for all that the roots of modern science were established centuries, and in some instances millennia, before the births of Copernicus, Galileo, and Newton. In this enlightening, entertaining, and important book, Teresi describes many discoveries from all over the non-Western world-Sumeria, Babylon, Egypt, India, China, Africa, Arab nations, the Americas, and the Pacific islands-that equaled and often surpassed Greek and European learning in the fields of mathematics, astronomy, cosmology, physics, geology, chemistry, and technology. The first extensive and authoritative multicultural history of science written for a popular audience, Lost Discoveries fills a critical void in our scientific, cultural, and intellectual history and is destined to become a classic in its field.

New Scientist: The Origin of (almost) Everything New Scientist,Graham Lawton,2016-10-25 From what actually happened in the Big Bang to the accidental discovery of post-it notes, the history of science is packed with surprising discoveries. Did you know, for instance, that if you were to get too close to a black hole it would suck you up like a noodle (it's called spaghettification), why your keyboard is laid out in QWERTY (it's not to make it easier to type) or why animals never evolved wheels? New Scientist does. And now they and award-winning illustrator Jennifer Daniel want to take you on a colorful, whistle-stop journey from the start of our universe (through the history of stars, galaxies, meteorites, the Moon and dark energy) to our planet (through oceans and weather and oil) and life (through dinosaurs to emotions and sex) to civilization (from cities to alcohol and cooking), knowledge (from alphabets to alchemy) ending up with technology (computers to rocket science). Witty essays explore the concepts alongside enlightening infographics that zoom from how many people have ever lived, to showing you how a left-wing brain differs from a right-wing one...

Modern Alchemy and the Philosopher's Stone Wilfried B. Holzapfel,Charles W, Christoe,2016-11-22 While preparing to carve an unusual sculpture from a stump in his front yard, a professor of physics is interrupted by two first-year students at the university where he teaches. When the students ask him about his project, the professor describes the future sculpture as a three-dimensional representation of the way a sample of each chemical element reacts when high pressure is applied to it. That is not at all what the students were expecting to hear. They somewhat reluctantly agree to sign up for a consultation hour with the professor so that he can explain the concept in greater detail. When the professor describes his research in the area of high-pressure solid-state-

physics as modern alchemy, the students are hooked! One of them has been contemplating a career in science or technology, the other is planning to concentrate on liberal arts and philosophy. This appears to be a unique opportunity that offers something for each of them and a chance to expand their common knowledge and friendship. The professor and the students review the history of medieval alchemy as the basis for modern science. They compare the challenges faced by the ancient philosophers to the obstacles of modern scientists. He introduces the students to his version of a modern alchemist's philosopher's stone, a device with which he is able to change the properties of the elements and make them take on different character. He leads this students on exploratory journeys across the Periodic Table of the Elements. They compare the different behavior and discover new relationships. The students converse about the mystical modern ideas that the professor introduces along the way; e.g., quantum chemistry and physics. He never resorts to formal, mathematical theory in their circumnavigation of the world of high pressure. In the end, the students feel enlightened in the true alchemical sense, ready for their own journey into the modern world of science and philosophy.
