Metadata and Semantic Research Salvador Sanchez-Alonso,Ioannis N. Athanasiadis,2010-10-08 Metadata and semantic research is a growing complex ecosystem of conceptual, theoretical, methodological, and technological frameworks, offering innovative computational solutions in the design and development of computer-based systems. Within this perspective, researchers working in the area need to further develop and integrate a broad range of methods, results, and solutions coming from different areas. MTSR has been designed as a forum allowing researchers to present and discuss specialized results as general contributions to the field. This volume collects the papers selected for presentation at the 4th International Conference on Metadata and Semantic Research (MTSR 2010), held in Alcala de Henares--a world heritage city and birthplace of Miguel de Cervantes--at the University of Alcala (October 20-22, 2010). The first MTSR conference was held online in 2005, followed by two more editions: in Corfu (2007) and in Milan (2009). The experience acquired during the past five years, and the warm welcome of MTSR by the research community, encouraged us to organize this new edition of the series, and turn it into a yearly event. According to the number and quality of the contributions submitted for revision, our 2010 effort was again a considerable success.

African Gold Roman Grynberg,Fwasa K. Singogo,2021-04-22 The book explores the evolving economics of gold as a global commodity as well as the production and trade of gold in and from the African continent. The growth of gold as an increasingly important and diverse source of African wealth is examined, alongside the impact that the rise of China in the 21st century has had on the demand for gold. The volatility of the gold price has increased as a result of the dramatic decline of gold demand for manufacturing purposes. Gold is Africa's second largest export after oil and is a perfect metaphor for a continent rich in resources while so much of its population lives in such dire poverty. The artisanal and small scale gold mining (ASGM) sector, is surprisingly widely perceived as being beneficial to the development of Africa despite its exploitation and dreadful health and environmental consequences. African Gold: Production, Trade and Economic Development considers policy issues regarding the gold mining sector, the economics of beneficiation, the retreat of jewelry manufacturing across the continent as well as 'Africa's golden future'. It is a relevant book for both academics and policymakers interested in Africa, natural resource, and development economics.

Babylon's Banksters Joseph P. Farrell,2010-06-01 In this latest installment of his remarkable series of books of alternative science and history, Joseph P. Farrell outlines the consistent pattern and strategy of bankers in ancient and modern times, and their desire to suppress the public development of alternative physics and energy technologies, usurp the money creating and issuing power of the state, and substitute a facsimile of money-as-debt. Here, Farrell peels back the layers of deception to reveal the possible deep physics that the "banksters" have used to aid them in their financial policies. Feral House also published Farrell's Philosopher's Stone: Alchemy and the Secret Research for Exotic Matter.
