Opportunistic Spectrum Utilization in Vehicular Communication Networks Nan Cheng,Xuemin (Sherman) Shen,2015-08-04 This brief examines current research on improving Vehicular Networks (VANETs), examining spectrum scarcity due to the dramatic growth of mobile data traffic and the limited bandwidth of dedicated vehicular communication bands and the use of opportunistic spectrum bands to mitigate congestion. It reviews existing literature on the use of opportunistic spectrum bands for VANETs, including licensed and unlicensed spectrum bands and a variety of related technologies, such as cognitive radio, WiFi and device-to-device communications. Focused on analyzing spectrum characteristics, designing efficient spectrum exploitation schemes, and evaluating the data delivery performance when utilizing different opportunistic spectrum bands, the results presented in this brief provide valuable insights on improving the design and deployment of future VANETs.

SPSS Demystified Ronald D. Yockey,2017-08-22 Without question, statistics is one of the most challenging courses for students in the social and behavioral sciences. Enrolling in their first statistics course, students are often apprehensive or extremely anxious toward the subject matter. And while SPSS is one of the more easy-to-use statistical software programs available, for anxious students who realize they not only have to learn statistics but also new software, the task can seem insurmountable. Keenly aware of students' anxiety with statistics (and the fact that this anxiety can affect performance), Ronald D. Yockey has written SPSS Demystified: A Simple Guide and Reference, now in its third edition. Through a comprehensive, step-by-step approach, this text is consistently and specifically designed to both alleviate anxiety toward the subject matter and build a successful experience analyzing data in SPSS. Key features of the text: Step-by-step instruction and screenshots Designed to be hands-on with the user performing the analyses alongside on their computer as they read through each chapter Call-out boxes provided, highlighting important information as appropriate SPSS output explained, with written results provided using the popular, widely recognized APA format End-of-chapter exercises included, allowing for additional practice Features and updates to this edition include: material updated to IBM SPSS 24 (available Fall 2016), including screenshots and data sets/end-of-chapter exercises.

**Hybrid Animation** Tina O'Hailey,2012-11-12 Artist imaginations continue to grow and stretch the boundaries of traditional animation. Successful animators adept and highly skilled in traditional animation mediums are branching out beyond traditional animation workflows and will often use multiple forms of animation in a single project. With the knowledge of 3D and 2D assets and the integration of multiple animation mediums into a single project, animators have a wealth of creative resources available for a project that is not limited to a specific animation medium, software package or workflow processs. Enhance a poignant scene by choosing to animate the scenic background in 2D while the main character is brought to life with 3D techniques. Balance the budget demands of a project by choosing to integrate a 2D or 3D asset to save time and expense. Choose which medium Hybrid Animation, learn the systematic development of the 2D and 3D assets and the issues surrounding choices made during the creative process.

**Digital Africa** Tania Begazo,Moussa Blimpo,Mark Dutz,2023-04-04 All African countries need better and more jobs for their growing populations. Digital Africa: Technological Transformation for Jobs shows that broader use of productivity-enhancing digital technologies by enterprises and households is imperative to generate such jobs, including for lower-skilled people. At the same time, broader use can support not only countries' short-term objective of postpandemic economic recovery but also their vision of economic transformation with more inclusive growth. These outcomes are not automatic, however. Mobile internet availability has increased throughout the continent in recent years, but Africa's uptake gap is the highest in the world. Areas with at least 3G mobile internet service now cover 84 percent of country populations averaged across Sub-Saharan Africa, but only 22 percent use such services. The average African business lags in the use of smartphones and computers, as well as more sophisticated digital

technologies that catalyze further productivity gains. Two issues explain the usage gap: the affordability of these new technologies and the willingness to use them. For the 40 percent of Africans below the extreme poverty line, mobile data plans alone would cost one-third of their incomes—in addition to the price of access devices, apps, and electricity. Data plans for small and medium businesses are also more expensive than in other regions. Moreover, shortcomings in the quality of internet services—and in the supply of attractive, skill-appropriate apps that promote entrepreneurship and raise earnings—dampen people’s willingness to use them. For those countries already using these technologies, the development payoffs are significant. New empirical studies for this report add to the rapidly growing evidence that mobile internet availability directly raises enterprise productivity, increases jobs, and reduces poverty across Africa. To realize these and other benefits more widely, Africa’s countries must implement complementary and mutually reinforcing policies to strengthen both consumers’ ability to pay and willingness to use digital technologies. These interventions must prioritize productive use to generate large numbers of inclusive jobs in a region poised to benefit from a massive, youthful workforce—one projected to become the world’s largest by the end of this century.

**Afrique numérique** Tania Begazo, Moussa Blimpo, Mark Dutz, 2023-08-08 Tous les pays africains ont besoin d'avantage d'emplois de qualité pour leurs populations croissantes. Le rapport « Afrique numérique : Transformation technologique pour l'emploi » montre qu'une utilisation plus large, par les entreprises et les ménages, des technologies numériques génératrices de productivité est impérative afin de générer de tels emplois, y compris pour les personnes peu qualifiées. Dans le même temps, cette démarche peut soutenir non seulement l'objectif à court terme de reprise économique postpandémique des pays, mais aussi leur vision d'une transformation économique assortie d'une croissance plus inclusive. Cependant, ces résultats ne seront pas automatiques. La disponibilité de l'internet mobile a augmenté sur l'ensemble du continent ces dernières années, mais l'écart d'utilisation est le plus élevé au monde. Les zones disposant d'au moins un service internet mobile 3G couvrent désormais 84 % en moyenne de la population des pays d'Afrique subsaharienne, mais seulement 22 % utilisent ces services. Et l'entreprise africaine moyenne accuse un certain retard en matière d'utilisation de smartphones et d'ordinateurs, ainsi que de technologies numériques plus sophistiquées qui contribuent à obtenir de nouveaux gains de productivité. Deux problèmes expliquent cet écart d'utilisation : l'absence d'abordabilité de ces nouvelles technologies et la de les utiliser. Pour les 40 % d'Africains qui vivent en dessous du seuil de pauvreté extrême, les forfaits de données mobiles coûteraient à eux seuls un tiers de leurs revenus, en plus du prix des appareils d'accès, des applications et de l'électricité. Les forfaits de données pour les petites et moyennes entreprises sont également plus chers que dans d'autres régions. De plus, la qualité des services internet n'est pas la même que la fourniture d'applications attrayantes et adaptées aux

compétences qui favorisent l'entrepreneuriat et augmentent les revenus †“ présente des lacunes qui freinent la volonté des entreprises et populations de les utiliser. Pour les pays qui utilisent déjà ces technologies, les retombées du développement sont importantes. De nouvelles études empiriques réalisées pour le présent rapport s'ajoutent aux données sans cesse croissantes qui démontrent que la disponibilité de l'internet mobile augmente directement la productivité des entreprises, accroît le nombre des emplois, et réduit la pauvreté à travers l'Afrique. Pour que ces bénéfices ainsi que d'autres avantages se concrétisent plus largement, les pays africains doivent mettre en oeuvre des politiques complémentaires et synergiques afin de renforcer à la fois la capacité de payer des consommateurs et leur volonté d'utiliser les technologies numériques. Ces interventions doivent accorder la priorité à une utilisation productive en vue de générer un grand nombre d'emplois inclusifs dans une région sur le point de bénéficier d'une main-d'oeuvre massive et jeune, laquelle est appelée à devenir la plus importante du monde d'ici la fin du siècle.

MIMO-OFDM for LTE, WiFi and WiMAX Lajos Hanzo, Yosef Akhtman, Li Wang, Ming Jiang, 2010-11-01 MIMO-OFDM for LTE, WIFI and WIMAX:

Coherent versus Non-Coherent and Cooperative Turbo-Transceivers provides an up-to-date portrayal of wireless transmission based on OFDM techniques augmented with Space-Time Block Codes (STBCs) and Spatial-Division Multiple Access (SDMA). The volume also offers an in-depth treatment of cutting-edge Cooperative Communications. This monograph collates the latest techniques in a number of specific design areas of turbo-detected MIMO-OFDM wireless systems. As a result a wide range of topical subjects are examined, including channel coding and multiuser detection (MUD), with a special emphasis on optimum maximum-likelihood (ML) MUDs, reduced-complexity genetic algorithm aided near-ML MUDs and sphere detection. The benefits of spreading codes as well as joint iterative channel and data estimation are only a few of the radical new features of the book. Also considered are the benefits of turbo and LDPC channel coding, the entire suite of known joint coding and modulation schemes, space-time coding as well as SDM/SDMA MIMOs within the context of various application examples. The book systematically converts the lessons of Shannon's information theory into design principles applicable to practical wireless systems; the depth of discussions increases towards the end of the book. Discusses many state-of-the-art topics important to today's wireless communications engineers. Includes numerous complete system design examples for the industrial practitioner. Offers a detailed portrayal of sphere detection. Based on over twenty years of research into OFDM in the context of various

applications, subsequently presenting comprehensive bibliographies.

*Scheduling and Congestion Control for Wireless and Processing Networks* Libin Jiang, Jean Walrand, 2022-06-01 In this book, we consider the problem of achieving the maximum throughput and utility in a class of networks with resource-sharing constraints. This is a classical problem of great importance. In the context of wireless networks, we first propose a fully distributed scheduling algorithm that achieves the maximum throughput. Inspired by CSMA (Carrier Sense Multiple Access), which is widely deployed in today's wireless networks, our algorithm is simple, asynchronous, and easy to implement. Second, using a novel maximal-entropy technique, we combine the CSMA scheduling algorithm with congestion control to approach the maximum utility. Also, we further show that CSMA scheduling is a modular MAC-layer algorithm that can work with other protocols in the transport layer and network layer. Third, for wireless networks where packet collisions are unavoidable, we establish a general analytical model and extend the above algorithms to that case. Stochastic Processing Networks (SPNs) model manufacturing, communication, and service systems. In manufacturing networks, for example, tasks require parts and resources to produce other parts. SPNs are more general than queueing networks and pose novel challenges to throughput-optimum scheduling. We propose a deficit maximum weight (DMW) algorithm to achieve throughput optimality and maximize the net utility of

the production in SPNs. Table of Contents: Introduction / Overview / Scheduling in Wireless Networks / Utility Maximization in Wireless Networks / Distributed CSMA Scheduling with Collisions / Stochastic Processing networks

**Wireless Multi-Access Environments and Quality of Service Provisioning: Solutions and Application** Muntean, Gabriel-Miro, 2012-01-31 This book serves as a vital resource for practitioners to learn about the latest research and methodology within the field of wireless technology, covering important aspects of emerging technologies in the heterogeneous next generation network environment with a focus on wireless communications and their quality-- Provided by publisher.

**Wireless Indoor Localization** Chenshu Wu, Zheng Yang, Yunhao Liu, 2018-08-22 This book provides a comprehensive and in-depth understanding of wireless indoor localization for ubiquitous applications. The past decade has witnessed a flourishing of WiFi-based indoor localization, which has become one of the most popular localization solutions and has attracted considerable attention from both the academic and industrial communities. Specifically focusing on WiFi fingerprint based localization via crowdsourcing, the book follows a top-down approach and explores the three most important aspects of wireless indoor localization: deployment, maintenance, and service accuracy. After extensively reviewing the state-of-the-art literature, it highlights the latest advances in crowdsourcing-enabled WiFi localization. It elaborated the ideas, methods and systems for implementing the crowdsourcing approach for fingerprint-based localization. By tackling the problems such as: deployment costs of fingerprint database construction, maintenance overhead of fingerprint database updating, floor plan generation, and location errors, the book offers a valuable reference guide for technicians and practitioners in the field of location-based services. As the first of its kind, introducing readers to WiFi-based localization from a crowdsourcing perspective, it will greatly benefit and appeal to scientists and researchers in mobile and ubiquitous computing and related areas.
