Personal Trials Jef Akst,2016-08-31 ALS is fatal. There is no cure. There is only one approved treatment, which extends the life span of ALS patients by an average of only three months. But one group of patients took their treatments into their own hands-fighting not just for their lives, but for a disease community that for years has struggled to be heard. Personal Trials is the story of Ben Harris, Rob Tison, and Eric Valor, who joined dozens of other patients in meticulously researching experimental treatments and in dosing themselves with chemical substitutes. All the while, the patients tracked their results openly online-charting thrilling improvements and devastating physical decline-hoping their experiences would enlighten others and advance ALS research. Facing a frustratingly slow and opaque biomedical research system, they believed their most important work was to share their data with the world. As Ben always said, If it is done in secret, it is done in vain.

Neurotherapeutics in the Era of Translational Medicine Richard A. Smith,Brian K. Kaspar,Clive N. Svendsen,2020-11-28 For the first time in history, there is now hope for treating neurological disorders that had previously been considered untreatable. The remarkable confluence of events that has heralded this is the focus of Neurotherapeutics in the Era of Translational Medicine. This anthology, written by many of the prominent scientists and researchers in the field of biotechnology, recounts the breathtaking advances that are revolutionizing treatment for disorders such as amyotrophic lateral sclerosis?, spinal muscular atrophy, multiple sclerosis, Parkinson's disease, myasthenia gravis, migraine, and glioblastoma. The story behind the story of these translational efforts is told, with authors depicting the ups and downs encountered on the path of their drug discovery and development effort. In parallel with this path, advances in identifying novel biomarkers and disease models are summarized, as are contemporary issues focusing on clinical trial design, bioethics, innovative funding strategies, and collaborations between government and academia in an effort to facilitate breakthrough treatments. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients'sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Palliative Care in Amyotrophic Lateral Sclerosis David Oliver,Gian Domenico Borasio,Wendy Johnston,2014-03-20 Amyotrophic Lateral

Sclerosis (ALS or motor neurone disease) is a progressive neurodegenerative disease that can cause profound suffering for both the patient and their family. Whilst new treatments for ALS are being developed, these are not curative and offer only the potential to slow its progression. Palliative care must therefore be integral to the clinical approach to the disease. Palliative Care in Amyotrophic Lateral Sclerosis: From diagnosis to bereavement reflects the wide scope of this care; it must cover not just the terminal phase, but support the patient and their family from the onset of the disease. Both the multidisciplinary palliative care team and the neurology team are essential in providing a high standard of care and allowing quality of life (both patient and carer) to be maintained. Clear guidelines are provided to address care throughout the disease process. Control of symptoms is covered alongside the psychosocial care of patients and their families. Case studies are used to emphasise the complexity of the care needs and involvement of the patient and family, culminating in discussion of bereavement. Different models of care are explored, and this new edition utilizes the increase in both the evidence-base and available literature on the subject. New topics discussed include complementary therapies, personal and family experiences of ALS, new genetics research, and updated guidelines for patient care, to ensure this new edition remains the essential guide to palliative care in ALS.

Drug War Politics Eva Bertram, Morris Blachman, Kenneth Sharpe, Peter Andreas, 1996-07-15 Why have our drug wars failed and how might we turn things around? Ask the authors of this hardhitting exposé of U.S. efforts to fight drug trafficking and abuse. In a bold analysis of a century's worth of policy failure, *Drug War Politics* turns on its head many familiar bromides about drug politics. It demonstrates how, instead of learning from our failures, we duplicate and reinforce them in the same flawed policies. The authors examine the politics of denial that has led to this catastrophic predicament and propose a basis for a realistic and desperately needed solution. Domestic and foreign drug wars have consistently fallen short because they are based on a flawed model of force and punishment, the authors show. The failure of these misguided solutions has led to harsher get-tough policies, debilitating cycles of more force and punishment, and a drug problem that continues to escalate. On the foreign policy front, billions of dollars have been wasted, corruption has mushroomed, and human rights undermined in Latin America and across the globe. Yet cheap drugs still flow abundantly across our borders. At home, more money than ever is spent on law enforcement, and an unprecedented number of people—disproportionately minorities—are incarcerated. But drug abuse and addiction persist. The authors outline the political struggles that help create and sustain the current punitive approach. They probe the workings of Washington politics, demonstrating how presidential and congressional out-toughing tactics create a logic of escalation while the criticisms and alternatives of reformers are sidelined or silenced. Critical of both the punitive model and the legalization approach, *Drug War Politics* calls for a bold new public health approach, one that frames the drug problem as a public health—not a criminal—concern. The authors argue that only by situating drug issues in the context of our fundamental institutions—the family, neighborhoods, and schools—can we hope to provide viable treatment, prevention, and law enforcement. In its comprehensive investigation of our long, futile battle with drugs and its original argument for fundamental change, this book is essential for every concerned citizen.

World Drug Report 2011 United Nations Office on Drugs and Crime, 2011-08-18 Many illicit drug markets have reached global dimensions and require control strategies on a comparable scale. In that context, there is a need to better understand these transnational markets and the manner in which they operate. The annual Report, produced by the United Nations Office on Drugs and Crime, is a contribution towards that objective. It provides an overview of the illicit drug situation worldwide and regionally, analytical discussions of the key transnational drug markets and statistical trends for all major drug categories.

Drug Use in America: Problem in Perspective, Second Report of the National Commission on Marijuana and Drug Abuse, March 1973 United States. Congress. House. Interstate and Foreign Commerce, 1973

The Health Effects of Cannabis and Cannabinoids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Health Effects of Marijuana: An Evidence Review and Research Agenda, 2017-03-31 Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. *The Health Effects of Cannabis and Cannabinoids* provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda—outlining gaps in current knowledge and opportunities for providing additional insight into these issues—that summarizes and prioritizes pressing research needs.
