High Altitude Medicine and Physiology 5E John West, Robert Schoene, Andrew Luks, James Milledge, 2012-11-29 A comprehensive update to this preeminent and accessible text, this fifth edition of a bestseller was developed as a response to man's attempts to climb unaided to higher altitudes and to spend more time in these conditions for both work and recreation. It describes the ever-expanding challenges that doctors face in dealing with the changes in human

Gas Replenishment Techniques for Use in High-altitude, Long-duration Scientific Balloon Flights Andrew S. Carten, Charles F. Sindt, 1979 This report covers the theoretical advantages and practical ramifications of a proposed new technique for compensating for the daily loss of lift (γ) experienced by long-duration high-altitude scientific balloon flights. This technique, 'Gas Replenishment', would transfer stored helium from an onboard dewar to the balloon, to replace gas lost due to temperature excursions. It would be a direct substitute for systems presently in use which drop ballast, that is, reduce system gross weight, to compensate for loss of lift. (With gas replenishment, lift is restored directly, with only a small change in system gross weight. A short summary of zero-pressure balloon flight theory is given at the start, to lead into the explanation of conventional ballast practices and

computations. The ballast equations are then modified to apply to the gas replenishment technique. Calculations for typical constant-gamma flights are summarized for each method of loss compensation and the clear superiority of gas replenishment is demonstrated in the areas of gross system weight of launch, usable payload weight and anticipated flight duration. Basic equations are then developed for a more complicated model of the gas replenishment system in which the value of gamma varies from day to day. Computations using these formulas are summarized in tabular form. The final section of the report is given over to the design problems associated with the type of dewar and heat exchange equipment needed to implement the gas replenishment concept. (Author)

Nutritional Needs in Cold and High-Altitude Environments Institute of Medicine, Committee on Military Nutrition Research, 1996-06-15 This book reviews the research pertaining to nutrient requirements for working in cold or in high-altitude environments and states recommendations regarding the application of this information to military operational rations. It addresses whether, aside from increased energy demands, cold or high-altitude environments elicit an increased demand or requirement for specific nutrients, and whether performance in cold or high-altitude environments can be enhanced by the provision of increased amounts of specific nutrients.

More than half a century has passed since man first stood on the summit of Mount Everest, and the story of man's attempts to climb higher and higher unaided is one of the more colourful and exciting in medicine and physiology. The past few decades have seen an explosion in the interest in mountain pursuits in general, as increasing numbers of people

Altitude Oliver Bocquet, Jean-Marc Rochette, 2020
At sixteen, bivouacked on a mountainside beneath a sky filled with stars, Jean-Marc Rochette has already begun measuring himself against some of Europe's highest peaks. The Aiguille D'ibona, the Coup de Saber, La Meije: the summits of the Massif des Ecrins, to which he escapes as a teenager, spark both exhilaration and fear. At times, they are a playground for adventure. At others, they are a battlefield. The young climber is acutely aware that death lurks in the frozen corridors of the French Alps. In 'Altitude', Jean-Marc Rochette tells the story of his formative years, as a climber and as an artist. Part coming-of-age story, part love letter to the Alps, this autobiographical graphic novel captures the thrill and the terror invoked by high mountains, and considers one man's obsession with getting to the top of them

High Altitude Erik R. Swenson, Peter Bärtsch, 2013-11-26 □ Over the last decade the science and medicine of high altitude and hypoxia adaptation has seen great advances. *High Altitude: Human Adaptation to Hypoxia* addresses the challenges in dealing with the changes in human physiology and the particular medical conditions that arise from exposure to high altitude. In-depth and comprehensive chapters cover both the basic science and the clinical consequences of exposure to high altitude. Genetic, cellular, organ and whole body system responses to high altitudes are covered and chapters discuss these effects on a wide range of diseases. Expert authors provide insight into the care of patients with pre-existing medical conditions that fail in some cases to adapt as well as offer insights into how high altitude research can help critically ill patients. *High Altitude: Human Adaptation to Hypoxia* is an important new volume that offers a window into greater understanding and more successful treatment of hypoxic human diseases.

Ecology of High Altitude Waters Dean Jacobsen, Olivier Dangles, 2017-08-18 Truly high altitude aquatic ecosystems are found primarily at lower latitudes: vast regions in the tropical part of the Andes, the Himalayas and Tibet, considerable areas in East Africa, and minor zones of Oceania. However, despite their abundance in these regions, their biology and ecology has never been summarized in detail. A current synthesis of the topic is therefore timely. High altitude waters are ideal systems with which to address a broad range of key and topical themes in ecology,

both at the regional and global scales. From specific functional adaptations of aquatic species to harsh environmental conditions through to global diversity patterns along altitudinal gradients and extinction risks of mountain populations due to vanishing glaciers, ecological patterns and processes found in high altitude waters are both diverse and singular. Although poorly considered in classical textbooks of ecology and limnology, high altitude waters have much to offer existing (aquatic) ecological theories and applications. These often threatened and exploited habitats are also ideal for studying the intimate interactions between social and ecological systems that characterize the majority of ecosystems in the Anthropocene.

Ecology and Biogeography of High Altitude Insects M.S. Mani, 2013-03-14 In my book *Introduction to High Altitude Entomology*, published in 1962, I summarized the results of eight years' studies, mainly on the Himalaya. I have since then had the opportunity of studying the collections of high altitude insects from the Alps, Carpathians, Caucasus, Urals, Alai-Pamirs, Tien Shan, Altai and other important mountains of the world in different museums and institutions in Europe. Through the courtesy and generosity of the Academy of Sciences of the Union of Soviet Socialist Republics, I was also able to personally collect insects and make valuable field observations on the Caucasus, the Alai-Pamirs, Ala-Tau and the Tien Shan mountains. Through

comparative studies I have tried to synthesize the fundamental principles of high altitude entomology. I have described here the distinctive characters of the high altitude environment, the ecological specializations of the high altitude insects, their ecological inter relations and the outstanding peculiarities of their biogeography. I have also presented here an outline of the high altitude entomology of the principal mountains of the world, with brief accounts of their orogeny, geology and vegetation. This book differs from all other contributions in the field in its comparative ecological approach and in the fact that the main emphasis is throughout on the evolution of the high altitude ecosystem as an integral part of the orogeny. High mountains are, in all parts of the world, important and independent centres of origin and differentiation of distinctive and highly specialized ecosystems and faunas.
