**Lithium-Ion Batteries: Basics and Applications** Reiner Korthauer, 2018-08-07 The handbook focuses on a complete outline of lithium-ion batteries. Just before starting with an exposition of the fundamentals of this system, the book gives a short explanation of the newest cell generation. The most important elements are described as negative / positive electrode materials, electrolytes, seals and separators. The battery disconnect unit and the battery management system are important parts of modern lithium-ion batteries. An economical, faultless and efficient battery production is a must today and is represented with one chapter in the handbook. Cross-cutting issues like electrical, chemical, functional safety are further topics. Last but not least standards and transportation themes are the final chapters of the handbook. The different topics of the handbook provide a good knowledge base not only for those working daily on electrochemical energy storage, but also to scientists, engineers and students concerned in modern battery systems.

**Batteries for Sustainability** Ralph J. Brodd, 2012-12-12 Batteries that can store electricity from solar and wind generation farms are a key component of a sustainable energy strategy. Featuring 15 peer-reviewed entries from the *Encyclopedia of Sustainability Science and Technology*, this book presents a wide range of battery types and components, from nanocarbons for supercapacitors to lead acid battery systems and technology. Worldwide experts provide a snapshot-in-time of the state-of-the-art in battery-related R&D, with a particular focus on rechargeable batteries. Such batteries can store electrical energy generated by renewable energy sources such as solar, wind, and hydropower installations with high efficiency and release it on demand. They are efficient, non-polluting, self-contained devices, and their components can be recovered and used to recreate battery systems. Coverage also highlights the significant efforts currently underway to adapt battery technology to power cars, trucks and buses in order to eliminate pollution from petroleum combustion. Written for an audience of undergraduate and graduate students, researchers, and industry experts, *Batteries for Sustainability* is an invaluable one-stop reference to this essential area of energy technology.

**Customizing Your Motorcycle** Chris Daniels, 2018-02-23 Building a custom motorcycle has never been more popular, with even the major manufacturers keen to capitalize on the growing trend. A custom motorbike is the product of an owner using their own skills to produce an individual machine, and with the right tools and approach it is well within most people's means to take a standard machine, new or second-hand, and

make it their personal statement. Providing clear and practical advice, this new book, *Customizing Your Motorcycle - Shed-Built to Show Bike* introduces the reader to the techniques and processes needed to customize any motorcycle. Eschewing the practice of using expensive off-the-shelf parts, it shows how the shrewd use of salvaged and alternative sources is not only economic but also results in a satisfyingly unique custom machine. Projects demonstrate how to make custom parts, while examples of how different custom bikes were built by the author show how they are designed and put together. The book covers: An introduction to the main styles on which today's custom scene was founded; Choosing a suitable bike and how to make decisions when buying second-hand; Workshop setup and tools; Components of a bike and custom parts; Basic improvements and the essential maintenance to make a safe and usable bike; Modifying frames and building seats, tanks and other components; Welding, cleaning and preparation for painting. Richly illustrated with 409 colour photographs.

**Human Systems Management** Milan Zeleny, 2005 Human Systems Management is an important work that integrates knowledge, management and systems into a unified world of thinking and action in business, decision-making and economics. It presents a modern synthesis of the fields of knowledge management, systems science and human organization. A biological rather than mechanistic perspective pervades the text. New and original ideas and approaches are presented with the simplicity and clarity typical of the well-known author.

*Biopsychology* John P. J. Pinel, 2009 Biopsychology clearly presents the fundamentals of the study of the biology of behavior and makes the topics personally and socially relevant to the student. The defining feature of Biopsychology is its unique combination of biopsychological science and personal, reader-oriented discourse. It is a textbook that is untextbooklike. Rather than introducing biopsychology in the usual textbook fashion, it interweaves the fundamentals of the field with clinical case studies, social issues, personal implications, and humorous anecdotes. It tries to be a friendly mentor that speaks directly to the reader, enthusiastically relating recent advances in biopsychological science.

Mass Customization Hans Kull, 2015-03-16 Mass Customization examines the business opportunities, considerations, and challenges manufacturers in various industries must weigh before committing to the significant investment in machinery and software needed to go to mass customization. For manufacturers who decide that it's time to take the plunge, the author describes the proven methods and latest technologies for making mass customization work seamlessly and profitably on the factory floor. Mass customization—the automated manufacturing of bespoke products, profitably combining the low unit costs of mass production with the flexibility of building custom products to order—has been touted as the next big thing for more than a quarter of a century. Until recently, however, mass customization made only modest inroads in a few industries. Now, the convergence of new ICT and manufacturing technologies with traditional CNC technologies means that mass customization's moment has arrived for breaking out into a wide range of industries. Hans Kull is an engineer and mathematician who applies his expertise in combinatorial optimization, programming, and engineering to devising end-to-end automated solutions for mass customization, automating and optimizing all processes—from bespoke parts supply, order processing, production, and waste minimization to packing and delivery. He shares with his readers practical lessons for making mass customization succeed, case studies from various industries, and an insider's vision of the business implications of mass customization's coming of age.
