*The Master Builder* Dr. Alfonso Martinez Arias,2023-08-01 An ingenious argument (Kirkus) for a novel thesis (Publishers Weekly) that cells, not DNA, hold the key to understanding life's past and present What defines who we are? For decades, the answer has seemed obvious: our genes, the "blueprint of life." In The Master Builder, biologist Alfonso Martinez Arias argues we've been missing the bigger picture. It's not our genes that define who we are, but our cells. While genes are important, nothing in our DNA explains why the heart is on the left side of the body, how many fingers we have, or even how our cells manage to reproduce. Drawing on new research from his own lab and others, Martinez Arias reveals that we are composed of a thrillingly intricate, constantly moving symphony of cells. Both their long lineage—stretching back to the very first cell—and their intricate interactions within our bodies

today make us who we are. Engaging and ambitious, The Master Builder will transform your understanding of our past, present, and future—as individuals and as a species.

**Master Your Stress, Reset Your Health** Doni Wilson, 2022-05-03 Learn to manage stress and overcome anxiety with this customizable breakthrough program from leading adrenal distress/stress expert Dr. Doni Wilson. We have come to accept stress and anxiety as being hand-in-glove with being successful. Many of us believe that we are supposed to be superhumans and just ignore stress—carrying on with long hours and sleepless nights, suffering quietly with the headaches, tension, and stomach sensitivity, rather than risk being perceived as unable to “keep up” with the demands of modern life. But we’re not robots or machines; we’re human. While stress is inevitable, and, in certain situations, even necessary for effective functioning, we must keep it from overpowering our daily lives by learning how to harness stress to empower us. In Master Your Stress, Reset Your Health, Dr. Doni Wilson shows that the key to breaking the cycle is finding and treating your unique stress type. After more than 20 years working with thousands of patients, Dr. Doni has found that people generally fall into one of five types based on their adrenaline and cortisol levels throughout the day: the Night Owl, the Stress Magnet, Yawning on the Go, Tired and Wired, or Sluggish and Stressed. In this groundbreaking book, she'll help you identify your stress type--and give you the tools to make stress work for you. Your body's particular response is based on genetics and your lifestyle. Your pattern is unique—even in similar situations, different people may respond to that stress in a completely different way. Dr. Doni's customizable C.A.R.E. program is simple: Clean eating, Adequate sleep, Recovery, and Exercise. Dr. Doni shows you how to tailor each step of the program for your stress type to allow you to: Overcome exhaustion and fatigue Clear up brain fog and improve memory Optimize your body weight Stop insomnia Recover from anxiety and depression Relieve headaches, chronic pain, and digestive issues Increase your energy, sex drive, and immunity Prevent serious illnesses such as cancer, dementia, and heart disease Add years to your life Far too many of us have accepted the negative effects of stress and anxiety as a fact of life—pushing through rather than risking falling short of the demands of modern life. This groundbreaking guide will set you on a path to become resilient to stress, so you can thrive like never before.

**Amino Acids in Nutrition and Health** Guoyao Wu, 2021-07-12 This book explains about amino acids (AAs) which are not only building blocks of protein, but are also signaling molecules as well as regulators of gene expression and the protein phosphorylation cascade. Additionally, AAs are key precursors for syntheses of hormones and low-molecular-weight nitrogenous substances with each having enormous biological importance. For example, physiological concentrations of AA metabolites (e.g., nitric oxide, polyamines, glutathione, taurine, thyroid hormones, and serotonin) are required for cell functions. Growing evidence shows that humans and animals have dietary requirements for all proteinogenic AAs. Mammals, birds, and fish also have species- and age-dependent needs for some AA-related substances. However, elevated levels of other products (e.g., ammonia, homocysteine, H<sub>2</sub>S, and asymmetric dimethylarginine) are pathogenic factors for neurological disorders, oxidative stress, and cardiovascular disease. Thus, optimal amounts of AAs and their ratios in diets and circulation are crucial for whole-body homeostasis and health. Adequate provision of one or a mixture of functional AAs or metabolites may be beneficial for ameliorating health problems at various stages of the life cycle (e.g., fetal growth restriction, neonatal morbidity and mortality, weaning-associated intestinal dysfunction and wasting syndrome, obesity, diabetes, cardiovascular disease, the metabolic syndrome, and infertility). Dietary supplementation of these nutrients can also optimize the efficiency of metabolic transformations to enhance muscle growth, milk production, and athletic performance, while preventing excess fat deposition and reducing adiposity. Therefore, functional AAs hold great promise in improving the growth, health, and well-being of individuals.

**Master Control Genes in Development and Evolution** Walter J. Gehring, 1998-01-01 In this fascinating book, one of the world's most eminent developmental biologists discusses some of the exciting new insights into how genes control development. Walter Gehring describes in vivid detail his essential contributions to the landmark discovery of the homeobox, a characteristic DNA segment found in the genes of all higher organisms from the fruitfly to humans, and he explains how this has provided the key to our modern understanding of development and evolution. The book thus becomes not only a lucid discussion of genetics but also an engaging description of the art of scientific investigation. Gehring begins his story by looking at the work of the many researchers who laid the foundation for the fields of molecular, cellular, and developmental biology, providing insightful vignettes of past and present investigators. He then describes his laboratory's hunt for the gene that caused odd mutations in the fruitfly--in which, for example, antennae on the head were transformed into legs. He explains that researchers eventually found that the same master control genes that dictate the body plan in flies also pattern human bodies, limbs, hands, heart, and brain. And he illustrates the universality of the genetic control of development by describing the development of the eye; eyes as different as those of humans, squids, and flies, he shows, develop under the same master control gene.

**GnRH: The Master Molecule of Reproduction** Andrea C. Gore,2013-03-09 Gonadotropin-releasing hormone (GnRH) cells are the key regulators of reproductive function in all vertebrate organisms. The GnRH molecule is synthesized in a small number of neurons in rostral hypothalamic regions of the brain. In mammals, these neurons release the GnRH decapeptide into the portal capillary system leading to the anterior pituitary gland. There, GnRH causes the release of the gonadotropins, luteinizing hormone (LH) and follicle-stimulating hormone (FSH), which in turn act upon the gonads to stimulate their maturation, and to cause synthesis of sex steroid hormones, estrogen, progesterone and testosterone. Although each of the levels of the hypothalamic-pituitary-gonadal axis is critical for reproductive function, GnRH neurons play the primary role in the control of reproductive maturation and adult reproductive function, and may even play a role in reproductive senescence. Since its discovery in 1970, there has been intense interest in GnRH-producing neurons, with more than 8000 papers and chapters in the last decade alone. Despite this activity of research in basic and clinical science, there has never been a book written specifically on GnRH neurons. GnRH: The Master Molecule of Reproduction aims to bring together the large and diverse literature of both laboratory and applied research that focuses on these unique cells. This book will provide basic background into reproductive neuroendocrinology, as well as specifics regarding the role of GnRH neurons in the control of reproduction. Students studying endocrinology, reproduction, neuroendocrinology or molecular endocrinology will benefit from this book. In addition, this book will take a multi-species approach which will be useful both to basic researchers as well as clinicians. Whenever possible, species differences and similarities will be presented, and if possible, studies on humans, or the clinical relevance of basic research findings to humans will be discussed (such as the treatment of reproductive disorders such as abnormalities in pubertal development, or infertility).
