Pistons and engine testing Mahle GmbH,2013-01-26 Die immer weiter steigenden Anforderungen an Verbrennungsmotoren machen auch vor dessen Herzstück – dem Kolben – nicht Halt. Für weniger Gewicht, Reibung oder auch noch mehr Verschleißfestigkeit sind tiefe Kenntnisse über die innermotorischen Prozesse sowie die geeigneten Werkstoffe, Konstruktions- und Bearbeitungsverfahren für Kolben inklusive der erforderlichen Erprobungsmaßnahmen notwendig. Ohne dieses spezifische Know-how kommt kein Fachmann der Kfz-Technik mehr aus, unabhängig ob er in der Konstruktion, der Entwicklung, der Erprobung oder der Instandhaltung tätig ist. Dieses Fachbuch beantwortet alle Fragen ausführlich, anschaulich und verständlich.

Model-Based Monitoring and Statistical Control Kohei Ohtsu,2024-06-11 Available in English for the first time, this classic and influential book by the late Kohei Ohtsu presents real examples of ships in motion under irregular ocean waves, how to understand the characteristics of fluctuations of stochastic phenomena through spectral analysis methods and statistical modeling. It also explains how to realize prediction and optimal control based on time series models. In recent years, the need to improve safety and reduce environmental impact in ship operations has been increasing, and the statistical methods presented in this book will be increasingly needed in the future. In addition, the recent development of innovative AI technology and highspeed communications will make it possible to adapt this method not only to ship monitoring and control, but also to any field that involves irregular fluctuations, and it is expected to contribute to solving issues that have been difficult to solve in the past. Part 1 describes classical spectral method for the analysis of stochastic phenomena. In Part 2, this book explains methods to construct time series models using the information criterion, to capture the characteristics of ship and engine motions using the model, to design a model-based monitoring system that informs navigators operating the ship and managers ashore. Furthermore, it explains statistical control method to design an autopilot system and the governor of a marine engine, while showing actual examples. Part 3 presents the basic knowledge necessary for understanding these topics of the book, namely, the basic theory of ship motion, probability and statistics, Kalman filter and statistical optimal control theory.

It describes the measurement methods for the testing of new vehicles and essential information on the procedure for creating a driving cycle. Lastly, it presents detailed technical specifications on the most important chassis-dynamometer cycles around the world, together with a direct comparison of those cycles.
