**Nuclear Theory Degree Zero: Essays Against the Nuclear Android** John Kinsella, Drew Milne, 2021-05-13 Nuclear Theory Degree Zero: Essays Against the Nuclear Android investigates the threat conveyed and maintained by the nuclear cycle: mining, research, health, power generation and weaponry. Central to this polyvalent 'report' on the infiltration of our lives and control over them exerted by the industrial-military complex, are critiques of the creation, storage and use of atomic weapons, the exploitation of Australian Aboriginal people and their lands through British atomic testing in the 1950s, and an exposé of a language of denial in the world of nuclear mining/energy/military usages. 'Nuclear' is also parenthetically investigated in its function as extended metaphor and question for poetry and poetics. Key is a consideration of the use of the language of the 'atomic' in cultural spaces, and in 'the arts'. Indigenous land-rights claims in the face of uranium mining, the semantics of waste and of the glib usage by nuclear power companies of the fact of global warming to suit their own corrosive agendas. The triumphalism of scientific and cultural discourse around 'nuclear' and the threats by nuclear fission are by association brought into question. The nuclear cycle throws the whole future of human beings into doubt, and this book seeks to assemble new resources of resistance through creative and critical mediums, including poetry and poetics. The chapters in this book were originally published as a special issue of Angelaki.

**Sustainable Lighting & Lighting for Sustainability** MDPI, 2021-01-08 The role of lighting is developing into a topic considered alongside sustainable development. Some years ago, lighting installations fulfilled technical requirements and consumed only enough energy for the accurate completion of visual tasks. This recently changed due to several discoveries in the matter of non-visual paths, whose influence on users' well-being, safety, mood, and productivity is starting to be applied to installations. Today, we know that sustainable development depends on many factors but we are only now beginning to understand how accurate lighting can be used to promote development from different perspectives. The present book compiles work dealing with the way lighting installations must be designed to work in an efficient and sustainable way, together with the way lighting can be used to contribute to sustainable development beyond the well-known savings in energy, green-house gas emissions, and raw materials consumption. The union of both concepts, sustainable lighting and lighting for sustainability is what is called total lighting, the global framework with which the lighting community will work in the near future.

**Cancer: Improving Your Odds** John G. Herron, 2019-12-16 Are you looking for actionable things that you can do to help your cancer treatment, or possibly prevent cancer in the first place? Something with scientific evidence that it works? Something that you won't be embarrassed to discuss with your family doctor or oncologist? Something that can improve your immune system and general health? That is exactly what you will find in this book. Read on for... • Actionable methods for naturally treating and preventing cancer (the scientific way, not the internet blogger way) • Simple things that you can add to your medical treatment to Improve Your Odds of successfully fighting cancer • 100% backed by science that you, or your doctor, can easily verify • Easy to read and understand, but formatted so that you can share the science with your doctor • Improve your immune system and general health • Evidence that some of the recommendations may significantly improve immunotherapy outcomes, as well as benefit chemotherapy and radiotherapy treatments. • New research information that has the potential to save many lives My hope is you'll use this information to improve your medical treatment, not replace it. Even though some of the natural treatments have been scientifically shown to be very effective on their own, they are even more effective when used in conjunction with modern medicine. This is called "adjuvant" therapy. You should strive to "Improve Your Odds" of beating cancer, not thumb your nose at modern medicine. You do not need a scientific or medical background to understand this narrative—but its claims are evidenced with scientific abstracts that your doctor will appreciate (abstracts that you can skip if you wish to cut your reading time in half!). You will find that all recommendations have solid evidence behind them; this isn't just another book where someone is simply making it all up and telling you what you want to hear. You should read this book with a highlighter and pencil at your side. This book has been extensively researched, and some of the information found here you will probably find in no other book or medical website. There is a special emphasis on how you can improve your immune system to better fight almost any cancer, even before you know you have it. You aren't trying to fire your doctor; you just want to help "Improve Your Odds." This book will help you do that. Your oncologist will want to know all of the supplements you are taking and why. This book includes the scientific abstracts and the information they need to find the full research studies. This will explain the "why" so you don't have to. They may also want to geek out on all of this science as they rarely get exposed to research on natural cancer treatments. Finally, this book enables you to take some control over your cancer treatment or genetic predisposition. In fact, most of the recommendations in this book are great even if you are healthy, as they can help prevent cancer and improve your immune system, too. Whether you may have breast cancer, skin cancer, lung cancer, etc., improving the immune system and your body's ability to fight cancer is always beneficial.

**Mobile Data Mining** Yuan Yao, Xing Su, Hanghang Tong, 2018-10-31 This SpringerBrief presents a typical life-cycle of mobile data mining applications, including: data capturing and processing which determines what data to collect, how to collect these data, and how to reduce the noise in the data based on smartphone sensors feature engineering which extracts and selects features to serve as the input of algorithms based on the collected and processed data model and algorithm design. In particular, this brief concentrates on the model and algorithm design aspect, and explains three challenging requirements of mobile data mining applications: energy-saving, personalization, and real-time. Energy saving is a fundamental requirement of mobile applications, due to the limited battery capacity of smartphones. The authors explore the existing practices in the methodology level (e.g. by designing hierarchical models) for saving energy. Another fundamental requirement of mobile applications is personalization. Most of the existing methods tend to train generic models for all users, but the authors provide existing personalized treatments for mobile applications, as the behaviors may differ greatly from one user to another in

many mobile applications. The third requirement is real-time. That is, the mobile application should return responses in a real-time manner, meanwhile balancing effectiveness and efficiency. This SpringerBrief targets data mining and machine learning researchers and practitioners working in these related fields. Advanced level students studying computer science and electrical engineering will also find this brief useful as a study guide.
