Educating for a video game culture Council of Europe,Alessandro Soriani,2021-05-21 Video games: a complex medium whose popularity is growing extremely rapidly, posing new challenges in the education of children and young people Children, teenagers and young people today live in a world profoundly influenced by technology and digital media. It has become almost impossible not to come into contact with mobile phones, tablets, laptops, console games and other forms of technology, whether for educational or entertainment purposes. Video games are an important aspect of this digital landscape and in recent years they have grown very rapidly in terms of popularity, relevance and complexity. Video games are fun, engaging and designed to capture players’ attention. These factors bring new opportunities but also new challenges for the education of children and young people. This volume of the Digital Citizenship Education series aims to make teachers and parents – indeed all adults with an educational role – aware of the complexity of this medium as well as the potential risks and opportunities that come with it. This publication also aims to provide readers with some useful strategies to help them choose the most appropriate video games and to engage in meaningful dialogue with stakeholders. Promoting a video game culture means generating a pedagogical reflection around video games: thinking about them as a cultural tool able to offer opportunities, not only to have fun, but also to think, learn and develop as a person. It also means considering the video game worthy of being the object of study and of an accurate and careful analysis of its characteristics, its mechanics and its language.

Mobile Security Products for Android Philipp Kratzer,Christoph Gruber,Andreas Clementi,David Lahee,Philippe Rödlach,Peter Stelzhammer,2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices1. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.

Parental Monitoring of Adolescents Vincent Guilamo-Ramos,James Jaccard,Patricia Dittus,2010 The close supervision of adolescents dramatically reduces the incidence of risky sexual behavior, drug and alcohol use, and other activities that could negatively affect one's health and well-being. Because of the strong correlation between parental monitoring and a child's welfare, social workers, psychologists, child development specialists, and other professionals who work with children now incorporate monitoring into their programs and practice. A definitive resource providing the best research and techniques for productive supervision within the home, this volume defines and develops the conceptual, methodological, and practical areas of parental monitoring and monitoring research, locating the right balance of closeness and supervision while also remaining sensitive to ethnic and socioeconomic backgrounds. Assembled by leading experts on childrearing and healthy parent-child communication, Parental Monitoring of Adolescents identifies the conditions that best facilitate parental knowledge, ideal interventions for high-risk youth, and the factors that either help or hinder the monitoring of an adolescent's world. The volume also sets a course for future research, establishing a new framework that evaluates the nature and approach of monitoring within the parent-adolescent relationship and the particular social realities of everyday life.
