*The New Spatial Planning* Graham Haughton, Philip Allmendinger, David Counsell, Geoff Vigar, 2009-12-04 Spatial planning, strongly advocated by government and the profession, is intended to be more holistic, more strategic, more inclusive, more integrative and more attuned to sustainable development than previous approaches. In what the authors refer to as the New Spatial Planning, there is a fairly rapidly evolving maturity and sophistication in how strategies are developed and produced. Crucially, the authors argue that the reworked boundaries of spatial planning means that to understand it we need to look as much outside the formal system of practices of 'planning' as within it. Using a rich empirical resource base, this book takes a critical look at recent practices to see whether the new spatial planning is having the kinds of impacts its advocates would wish. Contributing to theoretical debates in planning, state restructuring and governance, it also outlines and critiques the contemporary practice of spatial planning. This book will have a place on the shelves of researchers and students interested in urban/regional studies, politics and planning studies.

Idea Man Paul Allen, 2012 What's it like to start a revolution? How do you build the biggest tech company in the world? And why do you walk away from it all? Paul Allen co-founded Microsoft. Together he and Bill Gates turned an idea - writing software - into a company and then an entire industry. This is the story of how it came about: two young mavericks who turned technology on its head, the bitter battles as each tried to stamp his vision on the future and the ruthless brilliance and fierce commitment.

**The Ghosts of Songs** Kodwo Eshun, Anjalika Sagar, 2007 This eagerly awaited book is the first to assess the oeuvre of the Black Audio Film Collective (BAFC), one of Britain's most influential artistic groups. It reconsiders the entire corpus of the seven-person London-based group from inception in 1982 to its disbandment in 1998.

Individualized Religion Claire Wanless, 2021-04-08 Drawing on ethnographic research, this book explores individualized religion in and around Hebden Bridge in West Yorkshire. Claire Wanless demonstrates that counter to the claims of secularization theorists, the combination of informal structures and practices can provide a viable basis for socially significant religious activity that can sustain itself. The subjects of this research claim a variety of religious identities and practices, and are suspicious of religious institutions, hierarchies, rules and dogmas. Yet they participate actively in an overlapping and cross-linking informal network of practice communities and other associations. Their engagements propagate and sustain a core ideology that prioritizes subjectivity, locates authority at the level of the individual, and also predicates itself on ideals of sharing, mutuality and community. Providing a new theory of religious association, this book is a nuanced counterpoint to the secularization thesis in the UK and points the way to new research on individual religion.

**The BD Handbook for Lawyers Part Two** Tony Reiss, 2013-08-01 With increasing amounts of legal work being put out to tender and with clients choosing to select panels of firms, law firms need to get better at pitching for work. This handbook offers a rigorous yet workable approach - one which is based on twenty years of experience working on pitches. Pitch Perfect provides a disciplined, pragmatic framework with guides and checklists to offer practical help. It is designed to help practitioners - lawyers - learn how to be more effective at pitching and serves as a handy reference guide in your desk drawer in case your BD team are busy - or if you feel you need some extra help or a second opinion. The emphasis is less on the theory (though there is some) and more on the practicalities of pitching. The approaches contained within this book will help stimulate a steady flow of new and profitable work.

**Encyclopedia of Recorded Sound in the United States** Guy A. Marco, Frank Andrews, 1993 This alphabetical reference covers the entire spectrum of the recording of sound, from Edison's experimental cylinders to contemporary high technology. The major focus is on the recorded sound

industry in the US, with additional material on Canada, Europe, Australia, and New Zealand. The coverage is particularly strong on the earliest periods of recorded sound history--1877-1948, the 78 rpm era and 1949-1982, the LP era. In addition to performers and their work, entries also cover important commercial organizations, individuals who made significant technical contributions, societies and associations, sound archives and libraries, magazines, catalogs, award winners, technical topics, special and foreign terms, copyright laws, and other areas of interest. **Georges Perec's Geographies** Charles Forsdick, Andrew Leak, Richard Phillips, 2019-10-14 Georges Perec, novelist, filmmaker and essayist, was one of the most inventive and original writers of the twentieth century. A fascinating aspect of his work is its intrinsically geographical nature. With major projects on space and place, Perec's writing speaks to a variety of geographical, urban and architectural concerns, both in a substantive way, including a focus on cities, streets, homes and apartments, and in a methodological way, experimenting with methods of urban exploration and observation, classification, enumeration and taxonomy.

*Agricultural Innovation Systems* The World Bank, 2012-02-21 Managing the ability of agriculture to meet rising global demand and to respond to the changes and opportunities will require good policy, sustained investments, and innovation - not business as usual. Investments in public Research and Development, extension, education, and their links with one another have elicited high returns and pro-poor growth, but these investments alone will not elicit innovation at the pace or on the scale required by the intensifying and proliferating challenges confronting agriculture. Experience indicates that aside from a strong capacity in Research and Development, the ability to innovate is often related to collective action, coordination, the exchange of knowledge among diverse actors, the incentives and resources available to form partnerships and develop businesses, and conditions that make it possible for farmers or entrepreneurs to use the innovations. While consensus is developing about what is meant by 'innovation' and 'innovation system', no detailed blueprint exists for making agricultural innovation happen at a given time, in a given place, for a given result. The AIS approach that looks at these multiple conditions and relationships that promote innovation in agriculture, has however moved from a concept to a sub-discipline with principles of analysis and action. AIS investments must be specific to the context, responding to the stage of development in a particular country and agricultural sector, especially the AIS. This sourcebook contributes to identifying, designing, and implementing the investments, approaches, and complementary interventions that appear most likely to strengthen AIS and to promote agricultural innovation and equitable growth. It emphasizes the lessons learned, benefits and impacts, implementation issues, and prospects for replicating or expanding successful practices. The information in this sourcebook derives from approaches that have been tested at different scales in different contexts. It reflects the experiences and evolving understanding of numerous individuals and organizations concerned with agricultural innovation, including the World Bank. This information is targeted to the key operational staff in international and regional development agencies and national governments who design and implement lending projects and to the practitioners who design thematic programs and technical assistance packages. The sourcebook can also be an important resource for the research community and nongovernmental organizations (NGOs).

**Climate Change and Museum Futures** Fiona Cameron, Brett Neilson, 2014-12-05 Climate change is a complex and dynamic environmental, cultural and political phenomenon that is reshaping our relationship to nature. Climate change is a global force, with global impacts. Viable solutions on what to do must involve dialogues and decision-making with many agencies, stakeholder groups and communities crossing all sectors and scales. Current policy approaches are inadequate and finding a consensus on how to reduce levels of greenhouse gases in the atmosphere through

international protocols has proven difficult. Gaps between science and society limit government and industry capacity to engage with communities to broker innovative solutions to climate change. Drawing on leading-edge research and creative programming initiatives, this collection details the important roles and agencies that cultural institutions (in particular, natural history and science museums and science centres) can play within these gaps as resources, catalysts and change agents in climate change debates and decision-making processes; as unique public and trans-national spaces where diverse stakeholders, government and communities can meet; where knowledge can be mediated, competing discourses and agendas tabled and debated; and where both individual and collective action might be activated.

Digital Echoes Sarah Whatley, Rosamaria K. Cisneros, Amalia Sabiescu, 2018-05-07 This book explores the interplay between performing arts, intangible cultural heritage and digital environments through a compendium of essays on emerging practices and case studies, as well as critical, historical and theoretical perspectives. It features essays that engage with varied forms of intangible cultural heritage, from music and storytelling to dance, theatre and martial arts. Together, the collection reflects on the implications that digital interventions have on intangible cultural heritage engagements, its curation and transmission in diverse localities. The volume is a valuable resource for discovering the multiple ways in which cultural heritage is mediated through digital technologies, and engages with audiences, artists, users and researchers.

*The Dead of the Irish Revolution* Eunan O'Halpin, Daithí O Corrain, 2020-10-27 The first comprehensive account to record and analyze all deaths arising from the Irish revolution between 1916 and 1921 This account covers the turbulent period from the 1916 Rising to the Anglo-Irish Treaty of December 1921—a period which saw the achievement of independence for most of nationalist Ireland and the establishment of Northern Ireland as a self-governing province of the United Kingdom. Separatists fought for independence against government forces and, in North East Ulster, armed loyalists. Civilians suffered violence from all combatants, sometimes as collateral damage, often as targets. Eunan O'Halpin and Daithí Ó Corráin catalogue and analyze the deaths of all men, women, and children who died during the revolutionary years—505 in 1916; 2,344 between 1917 and 1921. This study provides a unique and comprehensive picture of everyone who died: in what manner, by whose hands, and why. Through their stories we obtain original insight into the Irish revolution itself.
