ESL Models and their Application Brian Bailey,Grant Martin,2009-12-15 This book arises from experience the authors have gained from years of work as industry practitioners in the field of Electronic System Level design (ESL). At the heart of all things related to Electronic Design Automation (EDA), the core issue is one of models: what are the models used for, what should the models contain, and how should they be written and distributed. Issues such as interoperability and tool transportability become central factors that may decide which ones are successful and those that cannot get sufficient traction in the industry to survive. Through a set of real examples taken from recent industry experience, this book will distill the state of the art in terms of System-Level Design models and provide practical guidance to readers that can be put into use. This book is an invaluable tool that will aid readers in their own designs, reduce risk in development projects, expand the scope of design projects, and improve developmental processes and project planning.

Knowledge Spaces Jean-Paul Doignon,Jean-Claude Falmagne,1999 Knowledge spaces offer a rigorous mathematical foundation for various practical systems of knowledge assessment. An example is offered by the ALEKS system (Assessment and LEarning in Knowledge Spaces), a software for the assessment of mathematical knowledge. From a mathematical standpoint, knowledge spaces generalize partially ordered sets. They are investigated both from a combinatorial and a stochastic viewpoint. The results are applied to real and simulated data. The book gives a systematic presentation of research and extends the results to new situations. It is of interest to mathematically oriented readers in education, computer science and combinatorics at research and graduate levels. The text contains numerous examples and exercises and an extensive bibliography.

Holographic Sensors Ali Kemal Yetisen,2014-12-03 This thesis presents a theoretical and experimental approach for the rapid fabrication, optimization and testing of holographic sensors for the quantification of pH, organic solvents, metal cations, and glucose in solutions. Developing non-invasive and reusable diagnostics sensors that can be easily manufactured will support the monitoring of high-risk individuals in any clinical or point-of-care setting. Sensor fabrication approaches outlined include silver-halide chemistry, laser ablation and photopolymerization. The sensors employ off-axis Bragg diffraction gratings of ordered silver nanoparticles and localized refractive index changes in poly (2-hydroxyethyl methacrylate) and polyacrylamide films. The sensors exhibited reversible Bragg peak shifts, and diffracted the spectrum of narrow-band light over the wavelength range $\lambda_{\text{peak}} \approx 495\text{-}1100$ nm. Clinical trials of glucose sensors in the urine samples of diabetic patients demonstrated that they offer superior performance compared to commercial high-throughput urinalysis devices. Lastly, a generic smartphone application to quantify colorimetric tests was developed and tested for both Android and iOS operating systems. The sensing platform and smartphone application may have implications for the development of low-cost, reusable and equipment-free point-of-care diagnostic devices.

Show Them You're Good Jeff Hobbs,2020-08-18 The bestselling, critically acclaimed, award-winning author of *The Short and Tragic Life of Robert Peace* presents a brilliant and transcendent work that closely follows four Los Angeles high school boys as they apply to college. Four teenage boys are high school seniors at two very different schools within the city of Los Angeles, the second largest school district in the nation with nearly 700,000 students. Author Jeff Hobbs, writing with heart, sensitivity, and insight, stunningly captures the challenges and triumphs of being a young person confronting the future—both their own and the cultures in which they live—in contemporary America. Combining complex social issues with the compelling experience of the individual, Hobbs takes us deep inside these boys’ worlds. The foursome includes Carlos, the younger son of undocumented delivery workers, who aims to follow in his older brother’s footsteps and attend an Ivy League college; Tio harbors serious ambitions to become an engineer despite a father who doesn’t believe in him; Jon, devoted member of the academic decathlon team, struggles to put distance between himself and his mother, who is suffocating him with her own expectations; and Owen, raised in a wealthy family, can’t get serious about academics but knows he must. Filled with portraits of secondary characters including friends, peers, parents, teachers, and girlfriends, this masterwork of immersive journalism is both intimate and profound and destined to ignite conversations about class, race, expectations, cultural divides, and even the concept of fate. Hobbs’s portrayal of these young men is not only revelatory and relevant, but also moving, eloquent, and indelibly powerful.
